Contemporary World History

Full course description

The course intends to trace back current situations to their historical backgrounds. The first three tasks, under the caption "Toolkit", will therefore consist of a brief exploration of the philosophy of history and some issues regarding historical perspective, a discussion of the concepts of 'state' versus 'nation' (in anticipation of issues regarding decolonization, specific regional conflicts, and possible sources for conflict in general that will be discussed in later tasks) and a discussion of the Cold War as an influential factor in recent history.

Each of the following tasks, under the captions of "Area surveys" and "Assessment of the current global situation" respectively, will be built around a case that represents the underlying problem, and both combined will lead the students to specific source material. Examples of such cases are decolonization, the economic development of Asia, conflict in Africa, and the implications of the current position of the USA as 'solitary superpower'.

Course objectives

- To provide students with an understanding of the main trends in politics, demography, society and culture over the last 70 years and to put these trends in a global context.
- To develop a critical attitude towards the use of historical theory, and the interpretation of historical data and processes.

Prerequisites

None

Recommended reading

Theory Construction and Modelling Techniques

Full course description

The aim of the course is to familiarize students with model systems within the different disciplines of Sciences, Social Sciences and Humanities. Models allow us to approach complex questions in systematic ways, for instance, by predicting weather conditions, the patterns of bird flight formations or the results of presidential elections. Such questions are present everywhere and it is through modelling that we can try to find some answers.

Modelling helps us to break down what we are studying into variables, understand relations or correlations between them and even predict the future. The course starts with a short introduction to models, followed by several case studies that illustrate their usefulness in various contexts. Exposing students to models used both in academia and every-day thinking, the course fosters a thorough understanding of natural and social phenomena. Throughout the course, students are encouraged to link models to specific situations and examples from their daily-life. The final report allows students to use the knowledge gained in the course to analyze a phenomenon/situation of their own interest. This can be done either by conducting thought experiments, applying and redefining existing models or designing one's own model.

The interactive lectures help students to gain a broad understanding of different kinds of modelling techniques. A special workshop is offered in order to trigger interests, thoughts and ideas and find ways of translating them into an individual and structured academic report.

Course objectives

- To offer a broad overview of scientific models and modelling techniques in different disciplines.
- To teach students how to work with models in different academic fields.
- To teach students how to model a specific phenomenon by using general models and modelling techniques.

Prerequisites

Prerequisite

None.

Recommended

This course provides an introduction to theorizing and modelling. It is relevant for a wide range of other courses that are offered at UCM. The written assignment in this course is closely aligned with SKI1008 Introduction to Academic Skills 1. Freshmen are recommended to take this course alongside SKI1008.

Philosophy of Science

Full course description

Typical issues in this course are: What is the role of observation in science? What is a scientific explanation? What roles do theories and experiments play in science? What is the nature of scientific progress? Can we rationally decide between scientific viewpoints? In what ways are the social sciences similar to or different from the natural sciences?

The course presents an introduction to major issues in the philosophy of science. It can be divided

into four parts. In the first we will deal with traditional positions on the objectivity and methodology of science, like those of logical empiricism. The second focuses on objections to this received view as formulated by critical rationalism and by Thomas Kuhn's paradigm theory. Kuhn's theory revolutionized thinking about scientific knowledge and led to the so-called sociological and historical turn in the philosophy of science. The course then addresses two fundamental problems in the field: 'Do our theories describe reality?' (The problem of realism) and 'Do we now have better knowledge than in the past' (The problem of cognitive progress). In the final part of the course problems in the philosophy of the social sciences will take center stage: How do the social sciences explain and predict events? Does the method of understanding present an alternative methodology for social science? And finally: What is the role of social science in society.

Course objectives

- To familiarize students with the philosophical foundations of scientific method.

Prerequisites

None

Recommended

It is strongly recommended not to take the course in your first or second semester.

Political Philosophy

Full course description

Politics is a complex and puzzling subject. If only taken at their word, it is difficult to understand why people act the way they do and believe the things they purport to believe in. As political philosophers we try to understand underlying conceptions and values that shape politics and which are used to justify concrete policies. We are not concerned with what people claim to believe. Instead, we are concerned with how the language and concepts that people use come to define who they are. In other words, we don't have ideas, ideas have us. Our task in this course is to understand those ideas.

This course will provide an introduction to contemporary philosophical debates about core political concepts such as justice, liberty, equality, community, and democracy in modern liberal-democratic societies. Students will become familiar with the thought of some of the leading modern political philosophers, like John Rawls, Hannah Arendt, Isaiah Berlin, Philip Pettit, and Martha Nussbaum. Since conceptual analysis is the core business of philosophy, students will learn to analyse concepts, to clarify fuzzy moral ideas, and to make explicit the tensions and contradictions inherent to our political lives. Students will learn how to apply these concepts to current political debate and practice.

Course objectives

- The course will provide an introduction to western political philosophy. Students will learn to analyse, discuss, and apply basic concepts in contemporary political philosophy such as justice, equality, liberty and community.
- Students will apply these core concepts to various local, national, and global political issues such as migration and global justice.
- Students will be trained in normative political argumentation. They will exercise their ability to debate contentious ethical issues of public life.

Prerequisites

None

Introduction to Biology

Full course description

Biology, the science of life, studies the organisms as the basic units of life. How they are evolved, how they are build up, how they act, how they communicate with each other, how they are related to the non-living environment, and how they reproduce. Since organisms are build up of cells, the basic unity of all life forms, the course will start with providing insight in the basic structure and function of cells and its organelles and the differences between prokaryotes and eukaryotes. We will continue by discussing the biomolecules essential for life and the processes that generate these molecules in the cell. Because organisms also grow and reproduce, the course will further focus on topics as the genome and its replication, transcription and translation, basic (Mendelian) genetics and the principles of cell growth and differentiation, metabolism and reproduction. The course will end with a comparison of the cycle of life of different species.

Course objectives

- To provide students with a good basic knowledge required to enter more specialised courses in life sciences.
- To gain insight in the biology of organisms.
- To increase appreciation and knowledge of the science of life.

Prerequisites

NB: This course is aimed at students who have never taken biology or have only taken basic level biology. It is strongly suggested that students with substantial high school experience in biology consider taking relevant 2000-level courses directly (for an indication of the relevant topics, see SCI-B, p. vi-viii).

Prerequisite

None.

Introduction to Programming

Full course description

This course is an intensive introduction to programming in Java that assumes no prior programming experience. It explores all aspects of modern programming by means of lectures and hands-on practical lab sessions.

The course starts with the basics of computer science and computer programming. After a short introduction to computer organization, the principles of structured programming in Java are presented. Main topics covered are: data types and variables, methods, conditional statements, loops, recursion. Finally, the course introduces the object-oriented features of Java and their usage for program design. All these concepts have to be understood both from their theoretical perspective and their practical applications.

Course objectives

- Identify, interpret and apply fundamentals of programming & object-oriented design.
- Give examples of important topics and principles of software development.
- Point out obvious mistakes in programs and analyze how they run.

- Design, compose and evaluate programs that solve specific problems.
- Use a software development environment (IntelliJ) to create, debug, and run programs.

Prerequisites

Abstract thinking ability. Basic math knowledge is assumed. No prior programming experience is required; recommended: SCI2039 (Was SCI1006) Computer Science.

Basic Mathematical Tools

Full course description

Students learn to analyze mathematical problems from various fields in mathematics, such as analysis, algebra, and probability theory. Thus, students are trained to model and solve quantitative problems from a wide variety of disciplines.

The course is intended in particular for students with only a limited mathematical background from pre-university education that need to refresh their skills in mathematics and calculus. The first three weeks recap topics that are already covered in secondary school. The remaining weeks cover more advanced topics to prepare students for further quantitative courses.

The course guides students through a wide variety of topics in mathematics and its applications. Topics range through solving equations and inequalities, techniques for differentiation, function analysis, probability theory, geometry and approximation techniques.

Course objectives

- To provide students with a thorough mathematical basic toolbox.
- To train students in computation and analytic reasoning.
- To demonstrate why mathematics is extremely useful in many disciplines.
- To prepare students for more advanced courses in mathematics.

Prerequisites

This course is aimed at students who have only taken basic level Mathematics in High School. Although the level of high school mathematics required for this course is basic, the pace of this course exceeds high school levels. Also, the course topics cover, but also digress beyond high school mathematics. Thus, since the emphasis of this course is on computational rather than conceptual issues, students that take this course are required to have at least some affinity with quantitative skills and application of mathematical techniques.

Students who are not sure whether this course is appropriate for them are welcome to contact the course coordinator. It is strongly suggested that students who have taken the highest level of mathematics in high school consider taking relevant 2000-level courses directly.

Prerequisite

None.

Discrete Mathematics

Full course description

The students will learn the what the following fundamental concepts involve:

1. Numbers: We discuss a.o. integers, natural numbers, real numbers and prime numbers and properties that these classes of numbers have;

2. Logic: This involves drawing (correct!) conclusions and how to use logic to prove mathematical statements.
3. Sets: A set is nothing more than a collection of items. Often those items will be numbers, but this is not necessarily the case. We discuss properties of sets and concepts related to sets, like intersections, and unions;
4. (Mathematical) relations: A relation is essentially a comparing mechanism for elements in a set. E.g. 'smaller than'. We discuss several relations and their properties;
5. Functions: A function is a mapping from one set to another. We discuss several properties that functions may have, like invertibility;
6. Combinatorics, the science of 'smart counting': The question is 'In how many ways...', the answer will often be a big number and we discuss how to find them quickly. For this purpose we use concepts like permutations and combinations.

Almost every time mathematics is used, it concerns some of the above concepts. A good understanding of these topics is therefore very important and Discrete Mathematics is a perfect course to combine with other mathematics courses. Hence, students who are interested in (applied) mathematics, computer science and/or econometrics might find this course particularly useful.

Course objectives

- To make students familiar with several fundamental concepts in mathematics, a.o. numbers, logic, proofs, sets, relations, functions and combinatorics (see description).
- To get the students to notice how beautiful the world of mathematics is.

Prerequisites

Substantial high school experience in Mathematics (For an indication of the relevant topics, see SCI-M, p. vi-viii). Students who are unsure if this course is suitable for them can contact the coordinator to discuss their situation.

Endocrinology

Full course description

The discipline Physiology deals with the explanation of the biological, physical and chemical factors that are responsible for the origin, development, and progression of life. The first course on Human Physiology - which is compulsory for this course - focused on the specific characteristics and mechanisms of the normal homeostasis in the human body. In this follow-up course disturbances in physiological function (homeostasis) resulting in disease will be studied and used to deepen the knowledge on human endocrinology. These disturbances will be studied through the presentation of patient cases exemplified by; hypertension, renal failure, infertility, steroid abuse, diabetes and starvation. Attention will also be paid to the treatment of these diseases.

Course objectives

- To obtain insight into the endocrine system of the human body by studying illnesses that disturb this homeostatic control mechanism.

Prerequisites

SCI2009 Human Physiology.

Recommended reading

- Multiple sources provided by UM/UCM libraries including textbooks on: Physiology, Biochemistry, Physics, Pathology, Internal Medicine, etc. The use of the on-line library Access Medicine (access provided by UB).

Calculus

Full course description

Students enter this course with a wide variety of backgrounds. For some students who have previously seen very little calculus there will be many new techniques introduced, whereas for other students with a broader prior experience some of the techniques will be familiar. Throughout the course we will illustrate the methods learnt by looking at real problems from different fields where these techniques can be applied and through this applied lens all students will explore new facets of calculus and deepen their knowledge.

The course will discuss;

- Functions
- Limits and continuity
- Derivatives
- Rules of differentiation
- Maxima and Minima
- Implicit differentiation and rates
- Integration
- Definite integrals
- Applications of integration
- Improper integrals
- Differential Equations

Course objectives

- In this course we provide an introduction to calculus. Emphasis is on an understanding of the basic concepts and techniques, and on developing the practical, computational skills to solve problems from a wide range of application areas.

Prerequisites

SCI1010 Basic Mathematical Tools or substantial high school experience in Mathematics (For an indication of the relevant topics, see SCI-M, p. vi-viii). Students who are unsure if this course is suitable for them can contact the coordinator to discuss their situation.

Sustainable Development: An Introduction

Full course description

Today it is acknowledged that achieving sustainable development at the local, regional and global scale is one of the greatest challenges for the 21st century. But in many cases the term 'sustainable development' functions as little more than a vacuous buzzword. So what does sustainable development actually mean? How unsustainable is our global society at the moment? Are we contributing to irreversible climate change? Are we already passing dangerous global environmental tipping points? Why are humans acting in such unsustainable ways? And, of course, what are sustainable ways forward?

This course aims to enhance student's understanding of 'sustainable development', based on the notion that human development can only be sustainable when environmental boundaries are respected. The course introduces the main concepts, ideas and theories related to the term sustainable development. Students will gain insights into (the limits to) humanity's immense impact on the earth's systems and the underlying drivers of these unsustainable trends. Furthermore, sustainable development requires an understanding that inaction has consequences. Students will learn about some of the contemporary ideas about how to achieve a more sustainable society. As part of the examination students will link theories/concepts/ideas discussed in the course to a self-selected case study (a promising way forward towards sustainability) in a poster presentation.

Course objectives

- To gain a basic understanding of the (various perspectives on the) concept of sustainable development and some of the main related ideas, concepts and theories.
- To gain insights into (the limits to) our immense global human impact on the earth's systems and the underlying drivers of these unsustainable trends
- To explore ideas about how to achieve a more sustainable society.

Brain and Action

Full course description

Human beings mostly go through their lives without paying much attention to their actions such as breathing, eating and even learning. Our brain seems to take care of us in an almost effortless way by planning, initiating and executing our actions and by regulating our somatic homeostasis. The course Brain and Action is concerned with exactly how the nervous system does so. The course deals with the scientific study of the central and peripheral nervous system as well as with some of the latest developments in neuroscience. Via problem based learning tasks, both the anatomy and functions of important neurological structures like the spinal cord and the brain are examined.

Questions that will be raised continually during the course are, e.g.: What is the hippocampus? What function does the corpus callosum have? How does the brain develop both pre- and postnatally? How does neurotransmission take place? Etc.

Course objectives

- To make students familiar with the basic division, anatomy and functions of the central and peripheral nervous system.
- To gain knowledge of the workings and anatomy of the brain's most important structures.
- To gain basic practical knowledge of brain dissection.

Prerequisites

Secondary school biology (for an indication of the relevant topics, see SCI-B, p. vi-viii) and/or a genuine(!) interest in the anatomy of the nervous system.

Recommended reading

- Bear, M.F., (2016). *Neuroscience: Exploring the brain* (4th ed.), ISBN: 9780781760034.
- Various textbooks on the anatomy of the brain (available in UM library and UCM reading room).
- Several research articles on the relationship between modern lifestyle and nervous system anatomy and functioning.

Biochemistry

Full course description

Biochemistry is considered the mother of all Life Sciences. Understanding Biochemistry will facilitate learning of more specialised Life Sciences such as Molecular and Cell Biology. This course will present the essentials of Biochemistry during 6 lectures and 10 tutorials. We will cover the structures, functions and interactions of the biomacromolecules, including proteins, lipids, carbohydrates, DNA and RNA, which perform many of the activities associated with life. We will provide insight in the specificity and action of enzymes, the biocatalysts of the cell. Further, we will explain metabolic pathways that result in the generation of ATP, the major energy currency of the cell.

Finally we will present recent biochemical understandings on genome editing that revolutionize treatment of diseases at the level of correcting mutated genes (gene therapy).

Course objectives

- To communicate fundamental principles governing structure, function and interactions of biological molecules to students encountering biochemistry for the first time.
- To increase appreciation of the science of biochemistry and its relevance to Health and Disease .
- To study the roles of bio-macromolecules like proteins, lipids, polysaccharides and nucleotides in living cells in the context of diseases such as hyperventilation, thrombosis and atherosclerosis.
- To create deeper understanding of the basic principles of enzyme catalysis and inhibition.
- To prepare students to enter advanced courses that require more detailed biochemistry knowledge, and to finally allow entrance to various Master programs in the life sciences.

Prerequisites

This course is designed to be taken in combination with SKI2086 Lab Skills: Biochemistry. Students wishing to take the Lab Skills should concurrently enroll in, or have completed, this course. Students wishing to take SCI2035 Biochemistry without taking the Lab Skills may do so.

Prerequisites

SCI1009 Introduction to Biology or SCI 1004 Introduction to Chemistry. Students with substantial high school experience in Biology or Chemistry (For an indication of the relevant topics, see SCI-B and SCI-C, p. vi-viii) can contact the coordinator to request a waiver.

Artificial Intelligence

Full course description

The course starts with an analysis of the question "Can machines think", and the preconceptions usually encountered in discussions about that idea.

Next the metaphor of an "intelligent agent" is introduced, that is, of an entity that pursues goals by perceiving and acting flexibly and autonomously in a possibly very complex environment.

The main part of the course explores the metaphor of an intelligent agent by introducing a number of state-of-the-art concepts, algorithms, and methods which enable computers (i.e., software and robots) to solve problems in a way which deserves to be called intelligent. Topics covered in this part are chosen from AI areas such as intelligent search and constraint satisfaction, architectures for intelligent agents, and coordination among intelligent agents.

Bachelor University College Maastricht

The course as a whole conveys basic aspects and facets of engineering (analyzing and designing) AI systems. Covered topics are explored and applied in exercises and tasks (in-class and homework).

Course objectives

- To convey the ideas that have emerged over the past fifty years of Artificial Intelligence research, and about two millenia of related work, expressed in the study of so-called intelligent agents.
- To discuss the possibility of machines that think.
- To show how algorithms can be used (1) to understand human behavior in terms of underlying processes, and (2) to enable systems to think or act intelligently.

Prerequisites

None

Advances in Biomedical Sciences

Full course description

The purpose of this course is to introduce students to recent breakthroughs in the physical and biological sciences that are now being explored for biomedical applications. The topics will come directly from the research expertise of the lecturers, all of whom are young principal investigators in the new research institutes at the UM: MERLN and M4I. The course will cover a broad range of topics, including nanomaterials for regenerative medicine, supramolecular biomaterials, big data and computer learning, electron microscopy, imaging and diagnostic mass spectrometry, and structural biology of tuberculosis. Each of these fields has the potential to address some of society's greatest challenges, including the health and vitality of our ageing population, and this will be discussed in both the lectures and the tasks. Students will gain firsthand experience of

scientific research taking place at the UM and will have the opportunity to visit research laboratories as part of a demonstration of some of the topics discussed in the lectures. Students will experience unrestricted access for a firsthand account of a new generation of research lines with a new generation of labs.

In addition to a final content-based oral exam, there will be two papers for evaluation. For their midterm, students will choose a recent discovery reported in the press and investigate the scientific claims and integrity of the reporting. In the final paper, the student acts as the reporter, and will write an opinion piece on a topic of research in either MERLN or M4I; this report will be informed by an interview with one of the lecturers.

This course is designed for top students with a concentration in the sciences who wish to advance their learning to the next level, beyond textbooks. Students will benefit from close contact with young scientists from diverse fields and will be expected to read scientific literature to enhance their learning. Skills learned within this course will be highly applicable for more advanced degrees (Master's, PhD) within the sciences, and within the competitive job market.

Course objectives

- To gain insight into frontier topics of the biomedical sciences, with first-hand accounts of successes, problems, and a forecast for the future.
- To apply knowledge from the natural sciences towards problems in society.
- To give an accurate account of the work and thought process of academic researchers.
- To learn to critically read scientific news and perform basic literature research.
- To learn how to ask questions of a scientist and report others research to a wider audience.
- To gain familiarity with cutting edge research within the MERLN and M4I institutes.
- To access new labs and research lines starting with young Assistant Professors within UM.

Prerequisites

At least one of: SCI2017 Organic Chemistry, SCI2037 Cell Biology, or SCI2038 Physics. Highly motivated students with a different background should speak to the course coordinators.

Recommended reading

Introduction to Chemistry

Full course description

The emphasis of this course will be on a number of essential topics in modern chemistry. The course will start with a close look at the structure of atoms and their place in the periodic table, followed by an examination of the properties of various types of chemical bonds, ending with a discussion of chemical reactivity. The topics covered in this course cover the characteristics of gases/liquids/solids, thermodynamics, reaction kinetics, acid-base chemistry, electrochemistry, and chemical bonding theory. The concepts that are learned are applied to biochemical examples. Basic knowledge of chemistry is important in a wide variety of disciplines, ranging from (life) sciences and medicine to management, economics and governance studies.

Course objectives

- To teach the first principles of organic and inorganic chemistry for future students in medicine, biology and molecular life sciences, in such a way that they can apply these concepts to solve typical chemical and biomedical problems.
- To give you the ability to recognize chemical compounds and to understand their basic physical and chemical properties.
- To enable you to understand the basic physical chemistry of fundamental importance to most natural processes, such as thermodynamics, acid-base behavior, kinetics, and electrochemistry.
- To provide the basic knowledge for further advanced courses in chemistry, biochemistry and the life sciences.

Prerequisites

NB: This course is aimed at students who have never taken chemistry or have only taken basic level chemistry. It is strongly suggested that students who took chemistry in high school consider taking SCI2017 directly.

None.

Microbiology

Full course description

The 7 weeks course will be divided into 4 parts:

Bacteriology (3 weeks):

1) Introduction in bacteriology. General principles of replication, classification and identification of bacteria will be addressed. Presence of bacteria in humans, animals and plants and composition of the endogenous flora will be discussed. These items will be discussed in an introduction lecture, expert meeting and 2 obligatory practical sessions.

2) Bacterial infections, including adhesion, virulence, biofilms and antibacterial resistance: This part will be discussed in a lecture and in PBL tutorial meetings. As example for a worldwide important bacterial infection we will discuss tuberculosis. Furthermore, the acquisition of antimicrobial resistance and the epidemiology of worldwide antimicrobial resistance will be discussed.

Virology (2 weeks):

1) Introduction in virology. General principals of replication, classification and pathogenesis of viruses and classes antivirals will be discussed in the introduction lecture and an expert meeting.

2) Viral infections: The second part will consist of 2 topics and will be discussed in PBL approach. Topics to be discussed are influenza and HIV. The unique characteristics of the structure of these viruses and its importance for epidemiology. The lecture on epidemiology and outbreaks will also focus on viral outbreaks

3) The host response to infection, and prevention of infection by vaccination will be discussed in a lecture, the expert meeting and during the PBL sessions.

Epidemiology of infectious diseases and outbreak management (1 week)

1) Introduction in epidemiology of infectious disease. General principals of transmission, latency and infectiveness will be discussed in a lecture and during PBL sessions.

2) The basic principles of outbreak management, the use of epidemic curves of disease for outbreak management and prevention of the spread of infectious diseases will be the focus of a lecture and PBL sessions.

Environmental and Applied Microbiology (1 week)

1) Introduction in the role of microbes in the environment. The role of microbes in biogeochemical cycles, such as the carbon and nitrogen cycles, in the environment and adaptation to the environment, as well as the use of micro-organisms in food-production, waste treatment and bioremediation will be discussed in a lecture and during PBL sessions.

Course objectives

- To obtain basic knowledge of microbiology, i.e. of bacteriology, virology and environmental and applied microbiology.
- To study the characteristics of a selection of micro-organisms in relation to their related infectious diseases, more specific pathogenesis, immunity, epidemiology, diagnosis and therapy.
- To study the epidemiology of infectious diseases in relation to outbreaks, outbreak management and prevention
- To study environmental microbiology by looking at the role micro-organisms play in our environment and how micro-organisms can be used to our advantage.

Prerequisites

SCI1009 Introduction to Biology

Recommended reading

The books recommended will only provide a basic knowledge of the topics, the students are encouraged to find scientific literature online for detailed study on the topics.

- Murray. Medical Microbiology. (7th ed.)
- Tortora. Microbiology: an introduction (8th ed.)
- (Review) scientific articles, mentioned in the course manual

Introduction to Game Theory

Full course description

What is a game?

The word game may make you think of things like poker, chess or backgammon. However, within the context of this course its meaning is far broader. A game is basically a decision problem in which several parties are involved. Generally these parties have different and conflicting interests, and often

there is no solution to the decision problem that will make all parties happy. The parties in the conflict are normally called players (or agents), but one should keep in mind that these may just as

well be firms competing for their market shares, animals fighting over a territory, children trying to get the biggest piece of cake, or politicians fighting over the distribution of budgets. We encounter very fundamental issues like rationality, expectations, fairness, power, cooperation, threats, manipulations, risk, stability. In some games everything depends on strategic possibilities of the players. In such games we also encounter information structures; what does each player know about the other player's possibilities and goals. Does A know that B knows that A knows that B knows etc?

Game Theory analyzes different types of games and their solution concepts. Analyzing, or solving, a game boils down to answering a mathematical question and then interpreting the result.

In the games that we discuss in the Game Theory course the solution depends on strategic possibilities of the players. We will discuss the games in order of increasing strategic possibilities, which means that as the course progresses, the games become more complex. Many examples shall be discussed to clarify the issues and many exercises will be provided to learn how to compute solutions.

Course objectives

- To familiarize the students with the fundamentals of Game Theory.

Prerequisites

SCI1010 Basic Mathematical Tools or substantial high school experience in Mathematics (For an indication of the relevant topics, see SCI-M, p. vi-viii). Students who are unsure if this course is suitable for them can contact the coordinator to discuss their situation.

Recommended reading

Datamining

Full course description

Data mining is a relatively new scientific field that enables finding interesting knowledge from (very large) data. In practice it is often a mixed-initiative process that has the potential to predict events or to analyze them in retrospect. Data mining has elements of artificial intelligence, machine learning, and statistics.

A typical database contains data, information or even knowledge if the appropriate queries are submitted and answered. The situation changes if you have to analyze large databases with many variables. Elementary database queries and standard statistical analysis are not sufficient to answer your information need. Your intuition guides you to understand that the database contains more knowledge on a specific topic that you would like to know explicitly. Data mining can assist you in acquiring this knowledge. The course shows you within two months how this works. You will learn new techniques, new methods, and tools of data mining. The course focuses on techniques with a direct practical use. A step-by-step introduction to powerful (freeware) data-mining tools will enable you to achieve specific skills, autonomy and hands-on experience. A number of real data sets will be analyzed and discussed. In the end of the course you will be able to apply data-mining techniques for research and business purposes.

The following points will be addressed during the course:

- * Data Mining and Knowledge Discovery
- * Data Preparation
- * Basic Techniques for Data Mining:
 - Decision-Tree Induction
 - Rule Induction
 - Instance-Based Learning
 - Bayesian Learning
 - Ensemble Techniques
 - Clustering
 - Association Rules
 - Tools for Data Mining
 - How to Interpret and Evaluate Data-Mining Results

Course objectives

- To provide an introduction to the fundamental concepts found throughout the field of data mining.
- To provide a practical experience of applying data-mining techniques for analyzing data and deriving new knowledge.

Physics

Full course description

Physics is the science of measuring the natural world; as a result, physicists have developed a series of properties and laws of the material world. These laws describe many physical phenomena from the composition of atomic nuclei to the evolution of distant stars. The course describes some of the general laws of nature, valid in the whole universe, and how such laws could be extracted from the results of carefully planned experiments. Clearly the whole of physics cannot be addressed in 6 weeks, so prior to the course beginning, participants of the course will be asked to contribute to the design of the curriculum (including topics covered, PBL tasks and assessment). This gives each year's course a slightly different perspective, but one which is tailored to the specific interests of the participants.

Topics offered (but not necessarily taught) are: Mechanics, Thermodynamics, Oscillators, Solid State Physics, Optics, Vibrations and Waves, Special Relativity, Nuclear and Particle Physics, Electronics, Astrophysics and Quantum Mechanics.

Course objectives

- To use the tools that participants have developed in SCI2018 in a physics environment. This means we will take a journey through a variety of topics of physics. The aim is to simultaneously prepare participants for further studies in the sciences concentration or for admission into future programs but at the same time giving a broad overview of physics as a science.
- We will review and expand on high school physics as well as observations of the natural world to explore the material world in a quantitative manner.

Prerequisites

SCI2018 Calculus.

Secondary school physics (For an indication of the relevant topics, see SCI-P, p. vi-viii)

Recommended reading

The required textbook is University Physics, H.D Young and R. A. Freedman, Pearson, 13th ed., 2008.

It is strongly advised to buy the book by Young and Freedman, which is an internationally well-known text and will allow you to successfully describe your physics credits in future admission procedures. Earlier and cheaper editions are offered at Amazon and can be used as well.

Mathematical Modelling

Full course description

To describe natural phenomena and processes, mathematical models are widely used. The focus in this course shall be on dynamical models (i.e., where time plays a role) in particular those that have interaction with the environment through inputs and outputs. Mathematical systems theory provides the framework to deal with such models in a systematic and useful way. First we consider some general aspects of mathematical modeling. Then we briefly address dynamical systems without inputs and outputs - but which may show nonlinear behavior. We study basic properties such as equilibrium points, linearization, and stability. We then switch to linear dynamical models with inputs and outputs. They are used in many different areas of the natural sciences and in engineering disciplines. We discuss the following topics and concepts. Linear difference and differential equations, Laplace transforms, transfer functions of linear systems; controllability, observability, minimality; system representations with an emphasis on state-space representations and canonical forms; stability; the interconnection of linear systems including feedback; frequency domain analysis and the relationship with filter theory, Fourier analysis, and time series analysis. To demonstrate the applicability of the techniques and concepts, many examples from science and engineering are mentioned and briefly discussed.

Course objectives

- To have the ability to interpret dynamical phenomena as mathematical systems and to cast them into such form.
- To understand the basic concepts of linear systems theory.
- To be familiar with analysis techniques for linear systems, to understand their behavior and interaction.
- To become familiar with some application areas of mathematical systems and models.

Human Physiology

Full course description

While Mathematics is seen as the father of science, Physiology is the mother. Physiology attempts to explain the physical and chemical factors that are responsible for the origin, development, and progression of life. Human physiology investigates the mechanisms of the human body making it a living being (Guyton). In the healthy human body it is of the utmost importance that the working conditions for all cells are kept "constant". In this respect it is noteworthy that essentially all organs and cells of the human body perform functions that help to maintain this constant nature or homeostasis by using feed-back mechanisms. We will begin by discussing the physiology of the cell, and the function of the cell membrane. Continuing, we will discuss cardiovascular physiology, respiratory, fluid and salt balance, followed by the autonomic nervous system and the endocrine system and ending with gastrointestinal physiology, control and feedback.

Course objectives

- To obtain basic knowledge of human physiology

Prerequisites

This course is designed to be taken in combination with SKI2079 Lab Skills: Human Anatomy and Histology. Students wishing to take the Lab Skills should concurrently enroll in, or have completed, this course. Students wishing to take SCI2009 Human Physiology without taking the Lab Skills may do so.

Prerequisites

SCI1009 Introduction to Biology. Students with substantial high school experience in Biology (For an indication of the relevant topics, see SCI-B, p. vi-viii) can contact the coordinator to request a waiver.

Cognitive Neuroscience

Full course description

Cognitive neuroscience is an entirely new research field that originally emerged from a combination of traditional sciences such as philosophy, psychology, medicine and biology that all investigate the principles of perception, behaviour and cognition from different perspectives.

As technical developments of different methods and tools in the field of cognitive neuroscience came forth, and as theoretical application of different mathematical and computer science-based models were used to explain neuronal functioning, additional disciplines, such as physics, mathematics, bioengineering and computer science materialized as an important part of this research field.

Subsequently, an effective research project in cognitive neuroscience requires an interdisciplinary cooperation, in which each scientific discipline contributes its respective genuine theories, models, techniques and tools for the mutual investigation of the neuronal principles of perception, attention, and cognition.

But can we really watch the brain at work? Are there ways to identify where exactly, and when exactly activation in the brain is necessary to perform a specific mental process? This course will help to give some answers on the basic principles of brain research and it will show relevant applications of these techniques in different areas of cognitive psychology.

Course objectives

- To give an introduction into the new field of cognitive neuroscience.
- To learn which methods a brain researcher can use to investigate the neuronal bases of different mental processes.

Prerequisites

SCI2034 Brain and Action and elementary knowledge of electricity and magnetism as stated under SCI-P(p. vi-viii).

Data Analytics

Full course description

This course treats the theory and practice of Business Analytics. Tools for the analysis of data are discussed, as well as methods for discovering knowledge from information and using this knowledge for intelligent decision making.

The course consists of applying up-to-date data mining techniques on real-life problems. These techniques will be implemented with modern software tools (SAS, SPSS modeller, Tableau, WEKA,

Bachelor University College Maastricht

XLMiner). We study how (and how not) to extract information from large data bases with standard techniques from data mining and how to interpret the results.

The first cases, selected from the literature, are used to get experience with the mentioned goals. The last two or three cases are selected from business practices based on current topical developments of the various disciplines involved with data oriented decision making: financial, marketing, supply chain management etcetera. These cases will be introduced by the selected companies. Some companies involved in previous years are: VISA (London), Proctor & Gamble (Brussels), and Smurfit-Kappa (Roermond).

Course objectives

- This course aims at getting hands-on experience in analyzing managerial decision processes, based on available data, and using quantitative techniques for decision making.

Prerequisites

SCI2033 Data Mining.

Optimization

Full course description

In everyday life we are surrounded with applications of optimization. A common drive of human activity is to make things better, to enhance performance, and to carry out the best possible actions in given situations. Often the essentials of a situation can be captured by a mathematical description

(a model, with or without constraints) and the value of a proposed action by a function (an optimization criterion). Then the goal becomes to optimize the criterion for the given model under the associated constraints (if any). Depending on the nature of the model, the constraints, and the optimization function, many different mathematical techniques are available to characterize and compute optima. In this course we address the most important areas in optimization and we study the most common techniques.

First, we consider the optimization of unconstrained continuous functions in several variables. Some notions we will come across are: partial derivatives; the gradient and the Hessian; stationary points; minima, maxima and saddle points; local and global optima. Techniques to compute optima range from analytical and algebraic techniques (i.e., solving systems of equations) to iterative and approximate numerical techniques (e.g., gradient methods and hill climbing, Newton and quasi-Newton methods, and several others). We will focus on a selection of these. An important class of functions to consider is that of least squares criteria. We will consider both linear and nonlinear least squares problems and suitable iterative techniques to solve them. Linear least squares problems are often encountered in the context of fitting a model to measurement data. They also allow one to rephrase the problem of solving a nonlinear system of equations as an optimization problem, while the converse is possible too.

Second, we address optimization problems subject to a given set of constraints. A well-known such class consists of linear optimization functions subject to linear equality or inequality constraints: the class of linear programs. The problem of fitting a linear model to measurement data using the criterion of least absolute deviations, can be reformulated as a linear program. Several methods are available to solve such problems, including active set methods and the simplex algorithm, but also interior point methods and primal-dual methods. We discuss the Kuhn-Tucker conditions for optimality. For the optimization of nonlinear functions subject to nonlinear constraints we address the Lagrange multiplier method.

To demonstrate the various optimization problems and solution techniques, we will provide many examples and exercises. To demonstrate the wide range of applicability, these are taken from different fields of science and engineering. To become acquainted with optimization techniques, one computer class is organized in which the basics of the software package Matlab are presented.

Course objectives

- To become familiar with the basic concepts and methods of optimization.
- To understand how techniques from calculus and linear algebra are useful for optimization.
- To become familiar with a diversity of optimization problems and solution techniques.
- To be able to cast certain real-world problems into the form of optimization problems.
- To be able to solve certain optimization problems with software (Matlab).

Organic Chemistry

Full course description

This course focuses on the basis of organic chemistry. In the first part of the course, important fundamental topics, such as atomic theory, bonding theory, hybridization, molecular orbital theory and resonance will be discussed. A special topic will be stereochemistry, which is an essential topic in organic chemistry and the life sciences, since stereochemistry often determines the activity of biological compounds or medicines. Subsequently, the course continues with an introduction into reactivity of organic molecules. Focus will be on a selection of fundamental organic reactions, which form the basis for a wide array of other organic reactions. To this end, a logical review will be provided of the reactivity of the most important functional groups, as applied in organic synthesis.

Course objectives

- To give the ability to recognize and name common organic compounds.
- To know the basic physical and chemical properties of common organic compounds.
- To understand stereochemistry and its impact on the properties and applications of organic molecules.
- To enable you to understand the most important organic reactions and be able to apply these reactions to obtain well defined organic compounds.

Prerequisites

SCI1004 Introduction to Chemistry. Students with substantial high school experience in Chemistry (For an indication of the relevant topics, see SCI-C, p. vi-viii) can contact the coordinator to request a waiver.

Globalization, Environmental Change and Society

Full course description

In recent decades, human dynamics, political relations and the global environment have been changing at an accelerating rate. Globalization plays an important role in the acceleration and direction of these changes. But what does 'globalization' exactly mean? At the moment we are witnessing changes which have different impacts on individuals, societies, and our environment. During the course we will learn more about the nature and form of these global changes that are occurring in the world of today. Changes will create new situations offering new opportunities and challenges, but also threats to the global environment. Topics to be discussed during the course include: climate change, health, climate governance, economic trade, water footprint, air pollution etc. This course is primarily about deepening our understanding of the nature, processes and potential impacts of what has commonly become known as 'Globalization', with a strong focus on the environmental side of these impacts.

Course objectives

- Gain knowledge on different ways to define the phenomenon of globalization,
- Learn to understand globalization as transplanetary connectivity,
- Gain understanding of the global character of water, water scarcity and the role of globalization herein,
- Gain knowledge on the functioning of several

conventional and renewable energy sources and their ability to make up for our future energy demands, •Gain understanding of the physical mechanisms underlying climate regulation and climate change, the risks related to climate change and the role of feedback mechanisms, •Gain knowledge on international agreements and actions to combat (negative consequences of) climate change, understand these actions, and learn to identify strengths and weaknesses, •Gain knowledge about sources, manifestations and effects of primary and secondary air pollutants, •Gain knowledge on different types of waste, ways to deal with them and their effects on society and the environment, •Understand positive and negative consequences of globalization on health in different parts of the world, •Adopt an interdisciplinary and integrative attitude towards handling the complex interrelationship between global developments, the environment and society by making use of a metaphoric case study of Easter island.

Prerequisites

None

Recommended reading

To be announced, but likely to consist of a selection of articles, papers and/or book chapters.

Instructional format

Tutorial group meetings and lectures.

Examination

The course will be graded either through an assignment (paper) and a final examination (written test), and/or the final examination combined with a participation grade

This course is a prerequisite for the following course(s):

Immunology

Full course description

The course Immunology focuses on the role of different humoral factors, cells and cell systems of the

innate and adaptive immune system, that are involved in the defense of an organism against intruders like foreign cells or (non) complex structures (e.g. foreign proteins). In addition, the processes in the immune response after immunization, vaccination and transplantation will be discussed.

Course objectives

- To gain knowledge and insight in cells and humoral factors of the innate and adaptive immune system.
- To gain knowledge and insight in cellular and molecular effector mechanisms of the innate and adaptive immunity during inflammation and infection.
- To gain knowledge and insight in the structure and function of primary and secondary lymphoid tissue.
- To gain knowledge and insight in the processes in the immune response after immunization and vaccination.
- To gain knowledge and insight in immune mechanisms in disease.

Linear Algebra

Full course description

Linear algebra is the branch of mathematics which is primarily concerned with problems involving linearity of one kind or another. This is reflected by the three main themes around which this introductory course is centred.

The first theme is concerned with what can be recognized without doubt as the most frequently occurring mathematical problem in practical applications: how to solve a system of linear equations. For this problem a complete solution procedure is developed which provides the student with a way to deal with such problems systematically, regardless of the number of equations or the number of unknowns.

The second theme addresses linear functions and mappings, which can be studied naturally from a geometric point of view. This involves geometric 'objects' such as points, lines and planes, and geometric 'actions' such as rotation, reflection, projection and translation. One of the main tools of linear algebra is offered by matrices and vectors, for which a basic theory of matrix-vector computation is developed. This allows one to bring these two themes together in a common framework, in what turns out to be an exceptionally fruitful way. By introducing the notions of vector spaces, inner products and orthogonality, a deeper understanding of the scope of these techniques is developed, opening up a large array of rather diverse application areas.

The third theme surfaces when the point of view is shifted once more, now from the geometric point of view to the dynamic perspective, where the focus is on the effects of iteration (i.e., the repeated application of a linear mapping). This involves a basic theory of eigenvalues and eigenvectors, which have many applications in various branches of science as will be discussed. For instance, important applications in problems involving dynamics and stability, and applications to optimization problems found in operations research.

Many examples and exercises shall be provided to clarify the issues and to develop practical computational skills. They also serve to demonstrate practical applications where the results of this course can be successfully employed.

Students will obtain insight that various seemingly different questions all boil down to the same mathematical problem of solving a system of equations. Students will learn to look at the same problem from different angles and will learn to switch their point of view (from geometric to algebraic and vice versa).

Course objectives

- To provide an introduction to the main topics of linear algebra. Emphasis is on an understanding of the basic concepts and techniques, and on developing the practical, computational skills to solve problems from a wide range of application areas.

Prerequisites

SCI1010 Basic Mathematical Tools or substantial high school experience in Mathematics (For an indication of the relevant topics, see SCI-M, p. vi-viii). Students who are unsure if this course is

suitable for them can contact the coordinator to discuss their situation.

Physical Chemistry

Full course description

This course focuses on advanced aspects in physical chemistry and how it contributes in solving problems encountered in biology, (bio)chemistry and the environment. Thermodynamics, chemical kinetics, (macro)molecular structures, and spectroscopy are the four pillars of the course addressing a broad spectrum of topics related to the life and environmental sciences, including (i) bioenergetics, (ii) phase transitions, (iii) ion and electron transport, (iv) chemical reaction and enzyme kinetics, (v) (bio)macromolecules and self-assembly, and (vi) molecular spectroscopy. Case studies are embedded to create an understanding how to apply the general principles of physical chemistry to biological, (bio)chemical and environmental problems. Development of plausible models for physical or chemical mechanisms, including the numerical analytical methods to solve the models and testing against observations and experimental evidence, are essential throughout the course.

Course objectives

- To provide an understanding of basic concepts from chemistry and physics on a more advanced level.
- To apply the general principles of thermodynamics in understanding and description of (biological) processes.
- To predict the rate of reactions under various environmental conditions, for example occurring

in living organisms.

- To predict and determine structure formation of (biological) macromolecules and their function.
- To get familiar with spectroscopic tools in analyzing biological systems at various length scales.

Prerequisites

Either 1. SCI2032 Physics II and SCI1004 Introduction to Chemistry;

or, 2. SCI2017 Organic Chemistry and SCI2038 Physics (or SCI1030 Physics I) or SCI2018 Calculus;

or, 3. SCI2035 Biochemistry I and SCI2038 Physics (or SCI1030 Physics I) or SCI2018 Calculus.

Students with a sufficient high-school background in physics can request an exemption for Physics. Please contact the course coordinator.

Metabolism, Nutrition and Exercise

Full course description

The aim of the course is to provide students with a solid understanding of the key aspects in energy metabolism, and the effects of nutrients on skeletal muscle metabolism during exercise of different types. The course requires prior knowledge on some simple (bio)chemical concepts (e.g. the structure and function of macromolecules, common forms of chemical reactions, basic cell structure, and metabolism of macromolecules).

The course starts with a theoretical framework in which the basics of exercise biochemistry and exercise physiology are discussed. The course builds on the knowledge students have obtained in basic and intermediate courses, such as biochemistry, human physiology, and cell biology. In addition, students are encouraged to relate to appropriate knowledge from other courses. This course is meant as a culmination where all relevant knowledge acquired in previous courses comes together and is applied. The first, theoretical part of the course is rounded off with a midterm exam.

In the second part of the course students discuss the individual case studies for the take-home assignments. This is done in the form of presentations. By doing so every student will have the opportunity to discuss their findings and, if applicable, remaining questions or issues relating to the case study, as well as receive feedback on how to proceed. The second part of the course is rounded off by a written recommendation (take-home assignment).

Course objectives

- To acquire knowledge of cellular and whole-body energy metabolism in rest and during exercise.
- To acquire knowledge of the effects of nutrients on cellular and whole-body energy metabolism.
- To acquire knowledge of the effects of training on different body systems and how this relates to exercise.

Please note that this course focuses primarily on the biochemical aspects of metabolic processes. It is not a course on nutrition or exercise physiology.

Prerequisites

SCI2035 Biochemistry.

Recommended

SCI2009 Human Physiology, SCI2037 Cell Biology.

Recommended reading

- There is no main book for this course. A list of suggested readings is provided in the course manual; these books are all available in Reading Room at UCM and/or in the library at the UNS50. In addition, E-Readers will be available in the Student Portal.

Cell Biology

Full course description

In this course students have an opportunity to get acquainted with the discipline of cell biology. This discipline has been profiting from the development and improvements of recombinant DNA technology and is a driving force in fundamental and biomedical research. In this course students are challenged to discuss, at a detailed molecular level, different cellular and genetic processes that are the basis of life as we know it. The aim of the course is to familiarize students with further knowledge in the field of cell biology, which will enable them to better understand and appreciate the newest developments in this research area. Discussions will revolve around general cell biological topics such as the role of membranes, membrane transport of small molecules, the nuclear architecture, the organization of the genome, regulation of transcription and translation, protein trafficking, the cell cycle and maintenance of genomic integrity, programmed cell death and senescence. The last task, dealing with cancer, serves as an integration task; knowledge of the previous topics is required to appreciate what the consequences can be when a cell goes astray and the defence mechanisms of the body fail.

Course objectives

- To obtain insight in basic molecular genetic and cell biological processes in cells, tissues and organisms by leading the student through the origin of life, its differentiation and diversification, and deregulation of molecular processes leading to disease.

Prerequisites

SCI1009 Introduction to Biology. Students with substantial high school experience in biology (for an indication of the relevant topics, see SCI-B, p. vi-viii) can contact the coordinator to request a waiver.

The Digital Enterprise

Full course description

Too often IT is viewed as the province of technocrats, a domain inhabited by technical experts with little relevance to real-world problems. And yet, the economic importance of information, information systems, and thus information management has been growing constantly over the last decades, thanks to the relentless increase in computer performance.

We are increasingly dependent on information systems and data to make decisions in a wide range of domains. Sensor and network technology helps us to collect and analyze data in real-time, and to speed up decision making in all areas of our society. The possibilities of information and computer science are endless, but they also raise concerns: for instance about privacy, security, and identity, but also about interpretation and perception of data.

All these developments have led to the present-day "digital enterprise". In digital enterprises, the creation, distribution, use, integration and manipulation of information is a significant economic activity. The digitization of enterprises also has consequences for society. People who have the means to partake in this form of society are sometimes called digital citizens. This is one of many dozen labels that have been identified to suggest that humans are entering a new phase of society. The digital society can be both a threat and an opportunity to enterprises – this is, for instance, clearly visible in sectors such as retail (traditional retailers vs Amazon & Co), accommodation (traditional hotel vs AirBNB) and transportation (traditional taxis vs Uber).

This course offers an overview of role of digital concepts in enterprises: the digital enterprise. The course provides both a theoretical grounding and a pragmatic approach to applying key concepts. Drawing on ideas, tools, and techniques from such disciplines as economics, sociology, cognitive science, organizational behavior, and computer science, the course shows the digital enterprise from different perspectives: its position in society and the market, but also elements such as governance, information technology, and people. The course serves as an introduction to other Information and Computer Science courses, in which the various topics of the Digital Enterprise will be discussed in more detail.

Course objectives

- To introduce students to the role of data, information and knowledge in several contexts: enterprises, but also society in general.
- To familiarize students with the background of knowledge management, its models and application.
- To introduce students to the methodologies used in developing information systems (e.g. the

systems development lifecycle method versus agile methodologies).

- To introduce students to the organization and governance of data, information and knowledge.
- To introduce students to the managerial challenges associated with the use of information systems in enterprises.

Prerequisites

NB: This course was formerly known as SCI1005 The Information Society. The course is an introductory course to the Information Sciences curriculum, providing an overview of topics related to the use, embedding and management of information and information technology. The emphasis will be on the organizational (enterprise) context, but we will also touch upon the broader societal impact of information technologies.

None.

Genetics and Evolution

Full course description

Within the life sciences there are two kinds of theories that deal with phenomena: proximate-causal theories and ultimate causal theories. Molecular genetics is indispensable for understanding the proximate causation of phenomena. It explains how genetics information, encoded in the DNA, is

transcribed and translated into molecules that are involved in the development of characteristics (phenotypes) of an individual. Evolutionary theory tries to solve problems related to the ultimate causation of phenomena. Why have specific genotypes been selected through selection on phenotypes? Its core discipline is evolutionary genetics. Genetics and evolutionary theory will be discussed in this course.

The course starts with the mechanisms that cause evolutionary change: natural

selection, inheritance, and gene expression. In order to make these mechanisms understandable for students, this course will deal with the essentials of molecular, Mendel, and population genetics. It then moves

on to the evolution of life cycles, sex, and sexual selection. After discussing kin selection it uses genomic imprinting to explain genetic conflicts. Game theory will be used to explain the models that treat conflicts. The course will finish with the evolution of life histories, especially senescence.

Besides theoretical and mathematical models, the course will treat the applications of these models within the fields of biology, medicine, and psychology. For example sexual selection will be used to explain the principles of partner selection in human beings (psychology), kin selection will be treated in the context of conflicts between paternal and maternal alleles during pregnancies (medicine), and the evolution of sex will be treated in relation to rates of mutation and recombination (biology).

Course objectives

- To acquaint students with genetics and evolutionary theory.
- To provide students with insight into the essentials of genetic and evolutionary models and their applications in biology, medicine and psychology.

Prerequisites

This course is designed to be taken in combination with SKI2088 Lab Skills: Genetics. Students wishing to take the Lab Skills should concurrently enroll in, or have completed, this course. Students wishing to take SCI2022 Genetics and Evolution I without taking the Lab Skills may do so.

SCI1009 Introduction to Biology. Students with substantial high school experience in Biology (For an indication of the relevant topics, see SCI-B, p. vi-viii) can contact the coordinator to request a waiver.

Pathobiology and Disease

Full course description

In this course students will have an opportunity to learn how modern medicine has benefitted from our knowledge in the fields of (molecular) cell biology and immunology. Pathobiology is the field that deals with disturbance of normal physiological processes and the consequences of it for adequate functioning of our human body. Our challenge has been to arrange a program that offers insight in the nature, e.g. the causes and processes of disease.

The emphasis in this course is on diseases of the immune system and oncology. In this respect, this course builds on the knowledge obtained in the UCM course 'Immunology' and 'Cell Biology'. It is our hope that the acquired knowledge will furthermore enable you to better understand and appreciate the newest developments in treatment of these diseases.

The program comprises PBL tasks, workshops and assignments. PBL tasks will be presented to you in the form of tutorial group meetings and topic-related lectures. The tasks deal with 1) examples of diseases caused by unwanted reactions of the immune system, e.g. chronic inflammation and autoimmunity, and 2) with oncological diseases in which cells have gone astray, circumvent the body's defense mechanisms and give rise to cancer.

Workshops will address immunology- and oncology-related research highlights related to diagnostic, preventive and (immuno)therapeutic developments in immunological and oncological diseases. Assignments consist of writing an essay and giving a presentation on a block-related subject for discussion and deepening in the tutorial group meeting.

Course objectives

- To gain more insight in the field of pathobiology, particularly in immunological and oncological diseases
- To increase appreciation and knowledge of healthy living.
- To provide students with a good basic knowledge required to enter master courses in life sciences.

Prerequisites

Climate Change

Full course description

Does it infuriate you when people consider the greenhouse effect to be a bad phenomenon? Do you know your 'RCP2.6' from your 'RCP8.5'? How about the relative importance of carbon dioxide and methane in terms of radiative forcing? Or the difference between climate-friendly and climate resilient? No? Join the club. Very few people understand the nuts and bolts of climate science. And that is a real shame, because climate change is considered to be the greatest environmental threat humanity has ever faced. The Intergovernmental Panel on Climate Change (IPCC) states that the human influence on the climate system is clear. Continued emissions of greenhouse gases will cause further warming and changes in all components of the climate system. Limiting climate change will require substantial and sustained reductions of greenhouse gas emissions, while the need for adaptation to this new reality is increasingly being recognized. The course will provide students with a sound understanding of the key drivers and processes of climate change. We will discuss the state-of-the-art climate science, examine some key impacts of (future) climate change, and explore what can be done to address the problem.

Course objectives

- To explore historic, current and future changes in our climate system.
- To review the uncertainties underlying (the modeling of) future climate change
- To examine some key impacts of climate change on human societies and natural systems.
- To explore climate mitigation and climate adaptation strategies (incl. Paris Agreement).

International Relations: Themes and Theories

Full course description

This first part of the course discusses several important theories and issues linked to theories such as the foreign policy of great powers, conflicts in the Middle East, democracy and the European Union, global economic structure and the efficiency of international organisations. This part of the course aims to introduce students to the main approaches and themes of International Relations, including international system, wars, power, nuclear weapons, cooperation and international institutions.

The second part of the course covers less mainstream approaches and some neglected issues about the 'other' side of world politics, for instance environmental issues, the problems of the developing world, gendered-biases, economic inequalities, the construction of partial knowledge, the legitimization of power politics, the representation of images, establishment of stereotypes and the reproduction of hegemony.

Since this is an introductory course establishing a foundation for the follow-up international relations courses, it introduces theories and covers discussions about how each one of them interprets the world. It is important in this course that students become aware of the theoretical richness of the discipline, and that there is not a single 'right' way to answer questions about what is happening around us in the world. Students are given a chance to discuss and to apply those theories to different and more specific cases and issues. For this reason, this course is an opportunity to learn and use international relations theories, concepts and models in daily news and real time developments in the world. Case studies or specific issues are provided by the course literature. In addition to this, in some tutorial meetings, students will be asked to bring news items of their own choice from newspapers and news agencies. Thus, the course is based on active student participation.

Course objectives

- To provide students with an introduction to the main approaches and many key issues in International Relations.

Prerequisites

Students cannot take this course in their first semester.

Introduction to Psychology

Full course description

Psychology is all around us. Psychology permeates our everyday lives. It is therefore not surprising that the science of psychology has received great interest from behavioral scientists and the general public alike. We are all amateur psychologists. We all want to know what makes us and other people

tick! However, our common sense understanding of how people think, feel and act is often misguided. The self-referential nature of psychology has caused some people to believe that psychology is not a science at all! This course will show you that psychology is a science, and that it encompasses the

collaborative efforts of scientists from many different disciplines. Psychology is the study of behaviour and mental processes, and as psychologists we aim to describe, understand, predict, and sometimes change behaviour. Psychologists study human behaviour and mental life from different perspectives

(i.e. biological, individual and social) and at different levels of analysis (from genes and the brain up to the social and cultural level). We will consider what these different approaches have to offer in our quest for an understanding of the human mind, the brain, and behaviour. Along the way, scientific

methods of psychological research will be introduced by addressing some of the main questions that drive contemporary psychology: How do we experience fear or happiness? How do we (think we) see the world around us? How do we learn, remember and forget things? Where should we draw the line between normal and abnormal behaviour? How social are humans? When do people harm or help

Course objectives

- To engage students in scientific inquiry about psychological processes.
- To introduce students to the various subfields of psychology as an academic discipline.
- To gain a basic understanding of the methods of psychological research.

Prerequisites

None.

Law and Society

Full course description

Legal scholars generally focus their attention on the law as it appears in books. They look at formal manifestations of the law, such as constitutions, statutes, legal rulings and court structures. While this is certainly an important aspect of studying law, we would miss quite a lot if we limited our attention to the formal structures of law, and ignored the larger society in which law functions. While law in action bears some resemblance to law in books, law as a social phenomenon is often far more complex than is apparent from the formal manifestations of law alone. This course looks at the law in action: it studies law as a social phenomenon. Only when we understand how the major elements of a legal system function together in a specific social context, can we really understand how law affects society and how society in turn shapes law. The first part of the course will

introduce the sociological study of law. We will give an overview of the field, discuss several prominent theoretical approaches and examine various methods of researching socio-legal questions. The second part of the course will examine several legal processes in detail, using the tools that were developed in the first half of the course. In particular, we will look at the organization of law, the making of law, law as a means of social control, dispute resolution and law as a means of social change.

Course objectives

- To study law as a social phenomenon and discuss several theoretical approaches to law and society.
- To examine a variety of legal processes, such as conflict resolution, lawmaking, social control and change, and to seek to understand how they function empirically.
- To examine and understand the interrelations between law (as an academic discipline) and other fields of study.

Prerequisites

SSC1029 Sociological Perspectives, SSC1007 Introduction to Law and Legal Reasoning, or SSC1003/SSC2065 Theories of Social Order.

Development Economics

Full course description

The long-run development and international economic relations of developing countries are the major topics of this course. The long-run growth part deals with topics such as basic growth theories, institutions and economic development, population, education, health, savings and investment. The international relations part relates growth to migration, aid, and foreign debt including financial crises, and also covers international trade policy and development strategies.

Course objectives

- To provide participants with an overview of major economic concepts and policies in development issues, such as growth and population dynamics, education, aid, trade and debt.
- To deliver the skills needed to consider development problems and approach them in a rigorous and critical way, using both economic theories and policy analysis.

Prerequisites

SSC1027 Principles of Economics. Knowledge of basic quantitative concepts such as reading and working with graphs and simple equations is also a prerequisite.

Management & Organization of Asian Enterprises

Full course description

This course will focus on the Asian enterprise and its setting. Issues and topics for analysis are:

- Business system and management process
- Interlinkages with external environment
- Leadership & HRM (human resource management)
- Production & innovation management
- Internationalization (operating abroad)
- Quality management
- IPR (intellectual property right)
- CSR (corporate social responsibility)
- Management of technology.
- International competition and cooperation.
- FDI (foreign direct investment) & technology transfer.

These issues will be dealt with from a comparative perspective and discussed alternately in lectures and seminars. The Asian countries to be investigated include China, Korea, Japan, India and selected countries from the South-East Asian region. The course is in particular of interest for students who consider doing business/an exchange/master program in Asia.

Course objectives

- This course aims to introduce students to Asian management systems and specific issues and implications that are pertinent to the management of Asian firms or firms located in or dealing with Asian businesses.

Prerequisites

SSC1027 Principles of Economics or SSC2036 Introduction to Business Administration.

Recommended

SSC2008 Organization Theory.

Recommended reading

The main text book for the course will be:

- Hasegawa, Harukiyo and Carlos Noronha, editors (2014), Asian Business and Management: Theory, Practice and Perspectives, 2nd edition Palgrave Macmillan.
- A collection of academic journal articles will also constitute additional readings - to be announced.

Bachelor University College Maastricht

In addition, students will be required to work in a small team on a course papers on relevant topics of their choices for which extensive literature review on the topics must be conducted.

Social Psychology

Full course description

Social psychology is the scientific study of the ways in which people's behaviour, thoughts, and feelings are influenced by others. This course will cover the core themes from social psychology - such as attitudes and attitude change, conformity, and aggression - and how they can be scientifically investigated. During the course, students will also participate in a "Humans of Maastricht" project. In this project, students will make contact with their self-perceived "out-group," applying social psychological theories and concepts to their experiences and reducing their own stereotypes and prejudice in the process.

Course objectives

- To provide an introduction to social psychology.

Prerequisites

SSC1005 Introduction to Psychology

Recommended reading

Basic books:

Introduction to Business Administration

Full course description

Business administration studies economic problems within the firm and relates to problems in the fields of marketing and logistics, finance, accounting and information management and organization and strategy. Business administration aims to provide an integrated view of all the various (sub) disciplines. This course introduces students in the various topics that are related to business administration so that students have basic knowledge for the more specialized courses in marketing, organization, finance, strategy, supply chain management and accounting. The course will be centered around a real-life management simulation: Market Place live.

Course objectives

- To introduce students to topics in business administration. In addition, the course prepares students for courses in marketing, organization, finance, strategy, supply chain management and accounting.

Prerequisites

War in World Politics

Full course description

Why do nations and states go to war? This course will endeavor to give some answers to this question. To do that, the course will be divided into three sections that mirror the above objectives. The first section will focus on the different types of conflict. In this section, the ethics of war will also be discussed: do “Just Wars” exist? Section two will concentrate on the causes of conflict. It will reflect on a variety of sources that emerge from such domains as the global system, the states themselves or individuals. Part three will examine as case studies a number of modern conflicts, such as World War I, World War II, the Korean War, the Vietnam War, the breakup of Yugoslavia, the War between India and Pakistan, the Arab- Israeli conflict and Saddam Hussein’s Wars against Iran and Kuwait.

Course objectives

- To understand international conflict.
- To examine different types of conflict and their various causes in the world.
- To examine as case studies different conflicts throughout history.

Prerequisites

SSC1006 International Relations or SSC1025 Introduction to Political Science and at least one 2000-level Social Sciences course.

Recommended reading

- Levy, J. S. and W. R. Thompson. (2010). *Causes of War*. Wiley-Blackwell.

Atrocity Triangle: A course on the Criminology of Gross Human Rights Violations

Full course description

The first part of the course introduces the leading concepts and theoretical frameworks that will structure the course. The course therefore firstly addresses the concept of the 'atrocity triangle' and it looks into the relationship between the three actors (the perpetrator, the victim, and the bystander) involved in the triangle. Subsequently, an integrated criminological model will be introduced which sets out the relevant etiological elements that will be addressed in greater detail in the second part of the course.

The second part of the course, which focuses on the perpetrators, will start with the forms, functions and effects of (political) violence and the concept of torture in particular. The analysis continues on the macro level and addresses the role of policy and ideology. Subsequent analysis focusses on the meso level and the role of military organizations and other institutions is discussed. In this context attention is paid to the influence of military training and we will discuss how with the help of a bureaucratic system genocide can be planned, organized and carried out. The discussion will thus address several compulsive and determinative features of the environment surrounding perpetrators of gross human rights violations. We will furthermore discuss several experiments (Milgram, Ash, Stanford, etc.) on obedience, institutional roles and conformity, but we will also address other social-psychological mechanisms which are helpful in understanding how and why people are able to participate in the perpetration of gross human rights violations. Lastly, the important role that language and discourse plays in conflict and international crime is highlighted.

The third part of the course will focus on the bystander. We will start the discussion on the role of the bystander by looking into the phenomenon of the 'the bystander effect' in order to address the question why bystanders fail to act. Secondly, the role of bystanders in international politics at the macro-level of both states and international organizations in the field of human rights will be discussed. We will give special attention to the role of the UN Security Council when it was

confronted with gross human rights violations. Lastly, in addition to perpetrators and bystanders (collaborators), certain actors in the same situations did not perpetrate or passively stand by, instead they took affirmative action and came to the help of those in need. We will therefore look more closely into the phenomenon of rescuing in order to find out what turns actors into rescuers.

The fourth and last part of the course will take a more victimological perspective, which focuses on the position of the victim. Who are the victims and why are they victimized? What is the relationship between these victims and their perpetrators and what are the consequences of this relationship? In this context specific attention will be paid to gender selective violence. More particularly, the phenomena of rape as a 'weapon of war' and genocide (gender selective mass killings) will be discussed. Also, the complex case of child soldiers will be addressed as they are victims and perpetrators at the same time.

Several lectures will be held during this course. These lectures will be used to illustrate the discussed materials and to provide the participants with a deeper understanding of the subject matter by presenting the linkage between theory and (research) practice. During the lectures, various guest speakers will address the subject matter from the practitioner's perspective. In addition, we will screen a number of documentaries that will be analyzed during the post-discussion. We hope that, through these documentaries, the subject matter of this course will become more accessible and less abstract.

Case studies play an important role throughout the course and we will therefore pay attention to a wide variety of cases including The Holocaust and other cases of genocide (Armenia, Australia, Cambodia, Rwanda, Srebrenica, Darfur, etc.). Although cases of genocide will play an important role in this course, the caseload is certainly not limited to genocide and other violent conflicts will be addressed as well. Here one could think of the following cases, Chili, Argentina, Guatemala, Indonesia, East Timor, Iraq, Syria, Congo, Central African Republic, etc. Not to forget the torture practices of the U.S.

The insights gathered throughout this course have policy implications and inform us how we could react to gross human rights violations once they have occurred. These policy implications are addressed in greater detail during another UCM course titled The aftermath of atrocity: A course on transitional justice and post-conflict reconstruction (SSC 3052) which will be taught during the spring semester in period 5.

Course objectives

- To gain a criminological understanding of gross human rights violations and other international crimes by examining their causes on individual (micro), institutional (meso), national and international (macro) levels using a criminological approach that integrates relevant insights from different disciplines (social psychology, sociology, victimology, history, international relations, international law and psychology).
- Moreover, to view the world through the eyes of the perpetrators as well as the victims and the bystanders by focusing on their roles in the occurrence of gross human rights violations.
- To make insightful the linkage between gross human rights violations and violent conflicts in the world.
- To gain an understanding of how to approach the criminological study of complex cases of violence and to be able to analyze such cases independently.

Prerequisites

Two 2000-level courses in the Social Sciences or Humanities.

Economic Psychology

Full course description

Increasingly, economists are discovering psychology as a means to enrich their models of economic behaviour and well-being and to give them a better foundation. The importance of this is illustrated by the fact that the Nobel prize winner in economics in 2002 was the distinguished psychologist Daniel Kahneman. He characterizes his research as a quest for the 'logic of the irrational'. Adam Smith already recognized that economic behaviour, just like other behaviour, is motivated by an intriguing blend of 'rational' considerations and 'irrational' sentiments. The great challenge is to investigate the implications of the latter motives for economics. This course aims to give an intensive introduction into this field. In the first nine sessions of the course the psychology and behavioural economics of judgment and decision-making are dealt with. Basic principles of rationality are compared with actual behaviour in making decisions. Also, a link is made to the emerging field of neuroeconomics. Next, students are introduced into the psychological and economic research on subjective well-being (happiness) and its socio-economic determinants (especially income). The importance of this research for economics and its policy implications will be highlighted. Students should realize that this course is not easy and that its material also includes some mathematical derivations.

Course objectives

- To familiarize students with basic concepts, theories and insights of the economic psychology of judgment and decision-making.

Prerequisites

SSC2061 Statistics I and SSC1027 Principles of Economics.

Culture, Politics and Society in Contemporary Asia

Full course description

This course focuses on the integration and synthesis of culture, economics and politics in the Asian societies to increase an understanding of the region, in its contemporary socio-political and cultural setting. This course will transcend the borders of academic disciplines and domains and deals with topics such as:

Bachelor University College Maastricht

- Cultural influences on work and social lives in Asian societies;
- Asian societies: debate on its development, characteristics and global implications;
- Asian political traditions and international relations;
- Asian economic development and regional integration efforts;
- Asian societies in the global context: debate, implications and trends.

These issues will be discussed alternately in lectures and seminars. The course is in particular of interest for students who consider doing business/an exchange/master program in Asia.

Course objectives

- To understand economic issues in contemporary Asian societies in their social, cultural and political context.

Prerequisites

SSC1003/SSC2065 Theories of Social Order or SSC1006 International Relations: Themes and Theories.

Recommended

COR1003 Contemporary World History.

Developmental Psychology

Full course description

The development of and changes in psychological functions from birth through adolescence are the topic of this course. These changes will be illustrated with many empirical findings and explained by some theoretical models. Such influential older theories as that of Piaget will be compared to more recent information processing models of development. How does a child reason? How does a child become faster and better in learning? How does a child succeed in developing from almost nothing into an adult? How do children learn to perceive and to think (the so-called cognitive development) ?

In addition to these questions, attention will be paid to language development because it is amazing to see how a newborn baby, who does not understand a word and cannot say anything, learns to talk within a period of two or three years without, incidentally, the use of dictionaries or grammar books. The social-emotional basis for later development will be explored. It concerns the attachment relations to mothers and fathers. How do infants form attachments? Is attachment important? Do our early attachments influence our later emotional development? Other social-emotional topics are temperament and aggression. Not every development ends in a "normal" child. The course will address deviant development too, such as disorders as autism and ADHD. When is an active young boy normal and when do we say that he has ADHD?

Course objectives

- To teach students what kind of changes underlie psychological development.
- To teach students how children develop psychologically in perception, cognition, language, personality and emotions from infancy to adolescence.
- To teach students about developmental disorders such as autism and ADHD.
- To provide students with knowledge on elementary biological processes that underlie psychological development.
- To provide students with knowledge about the learning processes that children have at their disposal such as habituation and social learning.

Violence and Conflict: Theories, Themes and Cases

Full course description

In this course, we will focus on contemporary conflict resolution. The course will cover many issues related to the theories, causes and models of violent conflict in the first part, and then conflict resolution, including prevention of conflicts, (issues of early warning and early action), halting ongoing violent conflict, the role and forms of mediation, peacekeeping and how to end violent conflict, build peace and transform societies to reconcile their differences in the second part.

Tutorials are enriched with case studies, interesting links, presentations and movies.

Course objectives

The objectives of this course are to survey the theory and practice of violent conflict and its resolution. The course will discuss some current issues in conflict studies related to the identity, community, belonging, human needs, structural issues, greed and grievances, discourses of violence and conflict, possible causes of communal violence, economic and environmental issues, third-party intervention, mediation, peace-building and reconciliation in the different stages of preventing, containing and ending violent conflict, as well as to gain insight into basic elements of peace and security studies, conflict management and international politics. Specifically objectives of the course is:

- To discuss and learn what conflict means and why groups resort to violence;
- To discuss conflict types and trends in the contemporary world;
- To get familiar with conflict models and conflict studies, such as primordial, constructivist, discursive and cultural approaches;
- To discuss ontological and epistemological issues regarding conflicts studies;
- To apply these models, concepts and theories to several conflicts;
- To understand the main techniques of conflict resolution such as mediation, problem-solving workshops and the efforts of International Organisations such as United Nations;
- To discuss peacekeeping and humanitarian intervention in conflict resolution;
- To get introductory knowledge on ending conflicts and post-conflict reconstruction, peacebuilding and reconciliation processes.

Prerequisites

At least two 2000-level courses in Humanities or Social Sciences.

Important note: Some background knowledge on important conflicts in history, current conflicts and issues around them, IR theories, and Philosophy of Science is helpful in this course. Students are expected to be familiar with the major events in the world (regarding conflicts and wars) and they should be able to find and analyse all information about them.

International Macroeconomics

Full course description

This course provides a detailed insight into global economic issues. The course starts with an overview of modern theory of international trade. After this, the determination of exchange rates is analyzed. Finally, the course addresses a number of issues in open macroeconomics, including the working of monetary and fiscal policy, and the economics of the euro. This background will be used to discuss and to critically evaluate current developments in the world economy, such as the current crisis, globalization, monetary and fiscal policy in the euro area and whether China should appreciate its yuan or not.

Course objectives

- To introduce students to international (macro)economics, with an emphasis on the

link between theory, empirics and current policy debates.

- To provide students with the tools required to understand coverage of macroeconomic issues in the popular discourse.

Prerequisites

SSC1027 Principles of Economics. Knowledge of basic mathematical concepts such as solving equations, reading and working with graphs is a prerequisite, as well as the knowledge of general macroeconomic indicators and concepts.

History of Western Political Thought

Full course description

When considering modern political issues it is often instructive, and sometimes humbling, to realize that many such issues have deep historical roots. For as long as human beings have been living together in societies, questions concerning how these societies should be organized have been asked. The answers that historical writers have given to these questions are still relevant today and still inform current political thought. By investigating the questions philosophers were grappling with and how they sought to answer them, we may perceive more acutely the questions facing our societies and discover how we might answer those questions. We will study important texts by 8 seminal political thinkers from several periods in history: Plato, Aristotle, Machiavelli, Hobbes,

Bachelor University College Maastricht

Locke Rousseau, Smith and Hegel. Our aim will be to understand the particular problems they were seeking to solve and how or whether they did so. Although the main texts we will use are historic, the methods we will use are analytic. We will also read several modern texts which take up themes from these historical texts, but these modern texts are strictly supplementary. By applying the tools acquired in Political Philosophy (COR1004) to these texts, we will be able to come to terms with them and apply historical insight to current issues.

Course objectives

- To provide students with a basic grasp of the evolution of political thought in the Western tradition.
- To teach students how to study historical works of philosophy.
- To identify how issues and questions in contemporary politics and contemporary political thought have their roots in historical writings.

Prerequisites

COR1004 Political Philosophy.

Philosophy of Mind

Full course description

The mind-body problem is a legacy from the scientific revolution which started in the 16th century and reached its culmination point with Newtonian physics. Starting with Galileo's and Descartes' formulation of this problem we will discuss different philosophical positions in a more in-depth fashion. In the behavioral- and neurosciences these problems transform into questions about consciousness, conscious experience, and conscious perception. Those topics disappeared from science with the rise of behaviorism in the early twentieth century. But now they are back in the behavioral- and neurosciences again. Only over the past few decades consciousness has reappeared in cognitive science and neuropsychology. We will start this course with some philosophy, then we will scrutinize modern day sciences, especially cognitive science and neuroscience for ideas on mind and consciousness. At the end of the course we will go back to philosophy and we will ask ourselves whether all this empirical knowledge from psychology and neuroscience has brought us further in unraveling the brain-consciousness- (or mind-body) problem.

Course objectives

- To acquaint students with current ideas, philosophical arguments and empirical evidence on the nature of mind and the relationship between mind and body. We focus on modern cognitive and neuropsychological theories in the area of consciousness. Philosophical reflection on the caveats and problems associated with the notion of consciousness will be stimulated.

Prerequisites

COR1002 Philosophy of Science and at least one 2000-level course from either Humanities, Social Sciences or Sciences.

Contemporary Sociological Theory

Full course description

“Many people, ordinary ones and scientists alike, hate theory. Yet they could not live without it. When all is said and done, theory is the more or less disciplined talk by which people make what sense they can of their social worlds” (Charles Lemert in *The Blackwell Companion To Major Classical Social Theorists* (2003), p. 267). This course is part two of a sequence tracing back through the historical development of sociological theory (the first part being *Classical Sociology*). Whereas in *Classical Sociology* we focused on sociological theory up until the 1930s, in this course we will be dealing mainly, but not exclusively, with social theory that has emerged from the 1960s onward. During this time, the historical context started to change in important ways, since it brought about an inclusion of new voices from the Global South, the beginnings of the greatest phase so far of the women’s movement, and a variety of other social movements from environment to gay rights. The 1960s pushed sociological theorists to focus more on processes of social change, on social inequality and processes of marginalization and exploitation that shape it, power relations and social movements that contest them, and on cultural and other differences among individuals and groups. In the first portion of the course, you will be introduced to four major theoretical schools of thought in modern sociology. They are: functionalism, the Frankfurt School, Structuralism, and Interactionism. We will discuss these traditions on the basis of a well founded and accessible text called *Understanding Modern Sociology* which comes out of the UK. The text includes a comprehensive representation of European and US-American sociological theory. This first part of the course will be enhanced by reading original works by Herbert Marcuse, Howard Becker, Nancy Chodorow and Michel Foucault. Reading original theoretical material is important since students are then given the opportunity to form their own opinion about what the theorists are saying. Reading original works, of course, can be a very difficult and challenging, but also elating task. In the second part of the course we will continue the work of reading original theoretical texts by focusing on more alternative ways of theorizing about the social world. We will be reading works by Patricia Hill Collins, an African-American standpoint theorist, Pierre Bourdieu, a French sociologist, and Edward Said and Franz Fanon, two thinkers who are classified as post-colonial theorists. Some of the questions we will be dealing with in this course include: How can we make sense of the social world? How does capitalism impact our social reality? How is social reality constructed? What causes social change? What is the link between agency and structure? How is knowledge produced and by whom?

Course objectives

- To familiarize students with theories in contemporary sociology and give them the necessary skills to analyze, use, and criticize those theories.
- To discuss what a theory is, how we can theorize, and how theories can illuminate real social problems or issues.

Prerequisites

One of the following courses: SSC1003 / SSC2065 Theories of Social Order, SSC2028 Classical Sociology, SSC 2059 Social Movements, HUM2031 Cultural Studies II, HUM 2014 Philosophers of the 20th Century.

Recommended

SSC2028 Classical Sociology or HUM 2014 Philosophers for the 20th Century. This course is not recommended for first year students.

Clinical Psychology

Full course description

The course Clinical Psychology is concerned with mental disorders. It is aimed at understanding mental and behavioural distress and/ or dysfunction and thereby learning about how to promote subjective well-being and personal adaptation. On the basis of case descriptions, important clinical

pictures of a.o. different anxiety disorders, eating disorders, addictions, mood disorders, psychotic disorders, and personality disorders are examined. Questions that are raised continually during the course are: What is the clinical picture of...? Where is the boundary between no need for care and need for care? What causes such a disorder? And what can be done about the disorder? At the end it will be clear that there is a gap between theory and practice, between scientific thinking and clinical treatment. A number of different theoretical schools will also be examined, and these schools explain/treat psychiatric disorders in keeping with their favorite theory. The choice of theory/treatment in most cases is thus based on ideology and not empirical findings, and the question is whether this situation is so desirable.

Course objectives

- To make students familiar with the most common psychiatric disorders; their clinical pictures, diagnostic criteria, the etiological theories and the empirical findings that either support or refute the theories, current ways of treatment, and the effectiveness of the therapies.
- To give students a basic idea of what clinical interviews are and what it feels like to 'have' a psychiatric disorder by writing a patient role and playing that role.
- To learn basic clinical interview techniques.

Prerequisites

One of the 1000 or 2000 level psychology courses offered at UCM.

Accounting and Accountability

Full course description

Accounting is usually studied from a financial point of view. This conventional view sees accounting as identifying, measuring and communicating financial information to enable informed judgments and decisions by the users of information. From this financial perspective, accounting is mainly split into two complementary fields: financial accounting and management accounting.

In financial accounting the external use of accounting information is discussed. The most important outcome of the financial reporting process is the annual report, containing the firm's financial statements. During the course students will learn essential bookkeeping techniques, that is, how to make the necessary journal entries and prepare basic financial statements. Furthermore, the underlying principles of financial accounting rules will be studied.

In discussing the subject of management accounting, which has an internal focus (aimed at managers), the course will concentrate on the value of management accounting information for the internal decision-making process. In general, the purpose of management accounting is to facilitate (e.g., cost calculations) and influence decision-making (e.g., performance evaluation).

This course is however not bound by this (narrow) financial framework. It acknowledges that accounting is gradually evolving from an entirely financially oriented discipline to one that also studies non-financial information, including contemporary concepts such as corporate governance and corporate social responsibility. As such, it discusses accounting within a broader framework, extending the notion of accounting to a societal phenomenon. In this respect we will also discuss the role accounting has possibly played in the recent financial crisis.

A topic of special importance in accounting and accountability nowadays is corporate governance. In essence, corporate governance deals with the relationships between a company's management, its board of directors, shareholders and other stakeholders. Specifically, the course will discuss some major important accounting scandals (Enron, WorldCom) and the role corporate governance played in these scandals.

Course objectives

- To give students the ability to apply basic bookkeeping (making journal entries and preparing basic financial statements) and management accounting techniques (e.g. cost analysis, budgeting).
- To provide an understanding of international accounting rules and principles.
- To provide an understanding of the basics of related fields like corporate governance, auditing and management control.

Identities

Full course description

Identity is about one's sense of self, it is about personhood, and it is about what kind of person one is. Identities always involve both sameness and difference. Thus, if you are Dutch, you are like other Dutch people and different from the non-Dutch. There is a tendency to see identities as being fixed or given. Sociologists, however, argue that identities are fluid and changeable and that we can acquire new ones. In this course we will explore theoretical texts on the historical, cultural and political construction of social identities. We will focus on class, gender, race, ethnicity and nation as historically specific, structured relations of oppression and exploitation examining their existence and interaction. Discussions and analyses will be based on how social identities work as overlapping categories of both inclusion and exclusion and how they are used to divide, rank, and discriminate. Some of the questions to be addressed are: What are the main levels of analysis within which we can explore the interplay between these exploitative and oppressive relations? What are their theoretical, cultural, ideological and political implications? The course is designed for students who have a serious interest in the topic and who are open to critically evaluate and understand their own participation within structures of domination and oppression. We will examine and interrogate how heterosexuality, whiteness and class privilege, for instance, function in such a way as to keep systems of oppression intact and discuss how to participate in the struggles against identity-based forms of domination.

Course objectives

- To learn how different categories of social identities operate as categories of socio-structural inequality.
- To discuss perspectives on race, ethnicity, class, gender and national identities in order to get a better understanding of what they are and how they are conceptualized theoretically.
- To learn about and reflect on how you yourself, your thinking and your way of being is affected by these relations of oppression and domination in everyday life.

Prerequisites

At least two of the following courses: SSC1029 Sociological Perspectives, SSC2028 Classical Sociology, HUM1003 Cultural Studies I, SSC2059 Social Movements, HUM2031 Cultural Studies II, HUM2018 Cultural Diversity in a Globalizing World, HUM2003 The Making of Crucial Differences, HUM2014 Philosophers of the 20th Century, HUM2056 Cultural Remembrances.

Classical Sociology

Full course description

This course is part one of a sequence of courses tracing back through the historical development of sociological theory. We will engage with the works of early theorists such as Auguste Comte, Emile Durkheim, Karl Marx, Max Weber, Antonio Gramsci, George Simmel and George Herbert Mead. Some of the basic lines of inquiry we will pursue include: What were the big questions driving the formation 'classical sociology'? Are these questions still relevant today? What is the basis of social

order and structure? How and why do societies change? What are the causes and consequences of conflict in society? What place does the individual hold in the study of society? Throughout the course, we will read original materials accompanied some contemporary interpretations of the classics. This is an essential course for students interested in the foundations of sociology and the social sciences more broadly.

Course objectives

- To become conversant in the theoretical foundations of classical sociology.
- To evaluate and assess these theories in a constructive manner.
- To compare and contrast social theories in a critical fashion.
- To be able to apply these theories to the study of contemporary society.
- To understand the socio-historical context from which these theories emerged.
- To reflect on the relevance and utility of social theory more generally.

Prerequisites

SSC1029 Sociological Perspectives, OR SSC1003/SSC2064 Theories of Social Order

Students must have completed Research Methods (SKI1004 + SKI1005) as this course requires basic working knowledge of social scientific methodology.

Recommended

The course coordinator strongly advises students who are still in their first year **not** to take this course.

Intermediate Microeconomics

Full course description

Economics is the study of exchange and tradeoffs. Questions about what to buy, what to produce and how to allocate time all involve tradeoffs between different alternatives, and economists develop models to better understand the process by which individuals and firms make such decisions. With these models in hand, economists can then develop criteria by which to judge the efficiency and effectiveness of market structures, policies and institutions. This course is a first introduction to microeconomics. It will present an overview of the basic models that constitute the foundations of modern economics. We will build the theory of the consumer and the producer from the bottom up to create models of market behavior. The goal is not to offer a complete description of the world as it exists; rather, we will seek to simplify reality with the goal of providing a concise description of a broad class of real-world circumstances. As we progress we will touch on examples of theory theory in applied settings to highlight and discuss how these models characterize much of the economic behavior we observe in the real world. After developing models of the market as a whole, we'll explore extensions of the theory to the strategic behavior of firms and individuals. The theory of strategic behavior will then be used to analyze, among other things, competition policy, environmental policy and political competition between parties.

Course objectives

- To introduce students to the basics of microeconomic theory.
- To acquire skills in applying its analytical tools to real-life economic problems.

Prerequisites

SSC1027 Principles of Economics.

Recommended

SSC2061 Statistics I.

Students taking this course should be prepared to use and manipulate basic mathematical expressions. A good knowledge of the analysis of common functions and their derivatives will be an asset for the course.

Urbanisation, Development and Poverty

Full course description

Since 2008, according to the United Nations Populations Fund, more than half of the world population lives in urban areas. Of particular concern is the fact that over a billion people now live in informal settlements or slums, where poverty and precarity are highly concentrated. Nevertheless, people continue to migrate to cities, and primarily to informal settlements. Despite their vulnerability to disaster, disease, violence and cultural tensions, they also appear to be focal points of vitality, opportunity and new initiatives. In many ways the city can be conceptualized as a contested site, a compact 'laboratory' where many of the tensions and opportunities related to globalization and development are acted out.

Through readings in this course we delve into the human aspects of these loci that embody contrasts and contradictions, and we analyze social, economic and political processes in cities of the Global South. We discuss connections and tensions between urban communities and economic development, the creation of vulnerable populations through urbanization and the precariousness of labor, the structural failures of slum ecologies and how they affect people, but also how citizens nevertheless find uncountable modes of making the city their home. We examine the articulation of neoliberalism in urban space, the consequences of international debt and structural adjustment projects in 'megacities', and we look at how cities are hubs for moving people (most often women) to other places to make a living in the service industries - domestic labor, sex work, cleaning jobs. Furthermore, we examine the opportunities these cities represent: as spaces of creativity, new *mélanges* of identities, new cultural forms and novel cultural, economic, social and political prospects. In short, we aspire to infuse you with knowledge both of how urban development and poverty are structurally reproduced in highly political ways, and of how cityness also always depends on how people manage to flexibly and inventively arrange their lives on a daily basis.

Course objectives

After completion of this course students have acquired knowledge about impacts of urbanisation on development and poverty in an increasingly globalized world. In particular, they will learn about:

- Multifaceted impacts of global urbanisation, including economic, ecological and social challenges and opportunities of increasingly populated cities
- Impoverished conditions of many city dwellers of the Global South, as experienced through access to infrastructures, mobilities, public space, and diversity
- Development impacts and potentials created by interconnectedness between 'global cities.'

International Law

Full course description

In particular since World War II international law has been subject to considerable change, both in scope and in content. The number of State actors has grown as the result of the process of decolonization. A large number of international organizations and institutions have also emerged as subjects of international law. Transnational corporations increasingly constitute an important economic power factor in international relations. The need for international cooperation became progressively evident in order to maintain international peace and security, to promote economic and social development, to safeguard the environment and to uphold human dignity. The course focuses on some of the more traditional issues of international law as well as on some new developments. The topics are: the changing nature and enforceability of international law, sources and subjects of international law, recognition, territory, the law of treaties, the United Nations, human rights, the law of the sea, State responsibility, international environmental law, peaceful settlement of disputes, and the use of force. One session will be in the form of a moot court on an international environmental law case for which students will prepare by writing a (short) memorandum of pleading. Both the paper and the oral pleading are part of the examination.

Course objectives

Students who have taken this course have in-depth knowledge of the characteristics of international law in comparison to national law systems and they will understand how the two systems complement each other. In this context, students can analyze the domestic situation of a State as regards the way in which international law has been implemented. They can identify situations of violations of international law and they are able to determine which steps can be taken to solve conflicts in a peaceful way.

- In addition, students will have acquired legal skills. In general, they will be able to apply legal theory to concrete cases. More in particular, they can find international legal sources, they are able to closely read and analyze legal documents (especially case law), they can identify legal problems, and they are able to use legal arguments in favour or against a certain legal position.

Prerequisites

SSC1007 Introduction to Law and Legal Reasoning or another law course.

Psychology and Law

Full course description

This course focuses on applications of psychology to the legal system. It will provide students with insights and knowledge about typical themes from the PsychLaw domain. Such themes range from how reliable eyewitness testimonies in court are to whether criminals have a brain dysfunction

making them permanently dangerous to society, to the role of experts in court. The role of psychologists within these themes is to ask questions that have a direct relevance to the legal arena and to conduct research to address these questions. Drawing from areas of social, cognitive, developmental, clinical and neuropsychology this course will deal with questions such as: Why do people commit crimes? Are children more susceptible to suggestion than adults? What is an expert witness? How reliable are different kinds of evidence (eyewitness testimonies, confessions etc.)? Are all criminals competent to stand trial? etc. A number of controversies will also be discussed including the practice of police interrogations, the insanity defense, and the role of psychologists in court and the use of polygraph as a lie-detector test.

Course objectives

The aim of this course is to provide psychology (but also law) students interested in legal psychology with an introduction to topics in this field:

- To gain a general impression of the topics that are within the scope of psychology & law and have knowledge regarding current issues and controversies in PsychLaw research.
- To be able to give descriptions of methods typically used and experimental work done in these disciplines.
- To have insights into the problems that arise when psychology is applied to law in practice.

Prerequisites

SSC1005 Introduction to Psychology.

Recommended

SSC1007 Introduction to Law and Legal Reasoning and/or an interest in Law.

Public Health Policymaking

Full course description

Students will become familiar with the following topics in public health: the epidemiology of mortality and disease; the determinants of health; the ageing of society and its implications for medical care; the unequal distribution of health; moral issues in public health; the economics of public health; health systems analysis; public health genomics; markets and public health; public health disasters. Students will become familiar with the following topics in public policymaking: the various components of public policy (values, objectives, instruments, policy paradigm); the concept of the policy cycle (problem recognition and definition, agenda building, policy formation, policy implementation, policy evaluation and feedback); theoretical approaches of public policy making (rational model, political model, institutionalist model); stakeholder and policy community analysis; types of state-society relationships (elitist model, pluralist model, corporatist model, regulatory agency model, communitarian model); the role of power in public policymaking. Regarding the third objective, students will learn to combine the knowledge gained under the first and second objective. Concretely, they learn to understand the implications of public health issues for public policymaking (e.g. how can we effectively tackle the problem of overweight/obesity or the problem of the unequal distribution of health? Which moral issues arise in public policymaking?) and, conversely, the implications of the structure and process of public policymaking for addressing public health issues (e.g. how are public health issues defined? Who dominates the agenda building process? What are the implications of the rational, political and institutionalist model for public health policymaking? What about the role of the state and society in public health policymaking? What are the specific characteristics of public policymaking in case of public health disasters?)

Course objectives

- To make students familiar with basic issues in public health.
- To make students familiar with basic issues in public policymaking.
- To make students familiar with basic issues in public policymaking on public health.

Entrepreneurship

Full course description

Not many will contest the societal impact of enterprising individuals and entrepreneurial ventures on our economies. Entrepreneurs may start-up companies that challenge (and often replace) incumbents. In the process, they create new jobs and apply competitive pressure on established firms. Entrepreneurs supposedly have an important direct and indirect effect on driving innovation. Despite the heroic image of successful entrepreneurs, entrepreneurship is much more about failure than about success. What motivates entrepreneurial types to venture of on a path that (at least statistically) will result in failure? Are they naïve, or are they stupid. In this course you will study factors that drive entrepreneurs and the entrepreneurial process. We will focus on new venture gestation: the initial stages of the process that may result in a new company to emerge. Throughout the course you will explore how entrepreneurs not only rely on generic business management principles, but also how they cope with the uncertainty, risk, scarcity of time, capital and other resources that is inherent to all entrepreneurial venturing. Perhaps you will conclude that many entrepreneurs are in fact not really good managers (good entrepreneurs will compensate for this by hiring better managers). We start the course by explore the process dynamics of entrepreneurial activity. We then will explore the origins of entrepreneurial opportunity, review how entrepreneurs screen and develop the opportunities that they discover, and you will unravel how entrepreneurs seek to appropriate the returns from their enterprising behaviour. This is not a “how-to” course, instead the course will introduce you to relevant scholarly insights that provide (future) entrepreneurs, an evidence base for entrepreneurial action. Those students that are ready to enact entrepreneurship may want to register for the LaunchBase Pre-incubation programme that we provide to enterprising students and alumni.

Course objectives

To provide an understanding of the how, where, when, whom and why of entrepreneurial initiative. However, our ambitions go beyond helping you to learn, we also want you to feel (more) empowered to engage in the entrepreneurial process itself:

- You are able to explain and illustrate the unique qualities of the entrepreneurial process.
- You are able to explain and illustrate the unique qualities of entrepreneurs.
- You are able to explain how entrepreneurial opportunities are discovered and created.
- You are able to explain how entrepreneurs select their opportunities.
- You are able to explain how entrepreneurs link value creation to value appropriation.

Prerequisites

SSC1005 Introduction to Psychology or SSC1029 Sociological Perspectives or SSC1027 Principles of Economics.

- [Principles of Economics](#)

Recommended reading

- Each student is to select and read a published biography of an entrepreneur.
- E-reader with papers & Reader with cases (You need to pay for your cases at <http://www.thecasecentre.org>, approx. €20).

Contemporary Critical Security Studies

Full course description

Security Studies during the Cold War was a rather limited and narrow sub-field of International Relations mainly focusing on state security and defining threat only in military terms. By the end of the Cold War period, new schools of thought have emerged in the field of Security Studies in parallel with the emergence of new kinds of threats against human well-being and security. Today, Contemporary Critical Security Studies represents a large group of scholars, schools, approaches and understandings. This course deals with a number of these schools and approaches. It starts with an introduction to the conventional security (Realism and Liberalism) and explains why these approaches are found unsatisfactory by the academic community at the beginning of the 1990s. Then it explains various theoretical positions from constructivism to Feminism (gender security), Green Theory (environmental security) and Post-Colonialism (security from non-Western perspectives). Then it introduces contemporary concepts like 'Securitisation' which is developed by the Copenhagen School and discusses 'security networks' or 'security apparatus' investigated by the Paris or Sociological school. Another relevant contemporary approach is called 'Human Security,' and the course explains the development of this concept. In general, the course aims at giving an idea to the students of International Relations how Critical Security Studies has developed as a separate sub-field of International Relations, which was the biggest contribution of the Wales or Aberystwyth Schools. The course also discusses several contemporary issues to give a broader understanding to the students about the application of theories and approaches (such as poverty, migration, borders, cyberwar, new technologies and warfare, responsibility to protect, humanitarian intervention, war against terror, and other contemporary security issues).

Course objectives

- To understand 'security' as a complex concept with changing meanings and applications.
- To discuss the consequences of different meanings for security critically.
- To deconstruct the given notions and policies about security and ask questions like what is included, excluded, legitimized and justified in them.
- To illuminate the main theoretical assumptions of the several approaches of security studies by placing the main focus on the more contemporary and critical ones.
- To explore the ways how contemporary or critical security studies challenge traditional security studies.
- To discuss in what ways contemporary security approaches compare and contrast with each other.
- To emphasize the empirical application and practical use of such approaches by discussing each approach with a relevant case study.

Prerequisites

SSC1006 International Relations.

The Aftermath of Atrocity: A Course on Transitional Justice and Post-conflict Reconstruction

Full course description

The course will first introduce and define the field of transitional justice. We will look into its historical evolution and address the rationales underlying it. The introduction furthermore includes an overview of the main mechanisms/components that can be part of the process of transitional

justice and how they are interrelated. The course will subsequently address several of these transitional justice mechanisms and in this analysis we will predominantly focus on the perspectives of the victims. Victims (and survivors) are not only a group, but also individual human beings and their wishes and interests in the aftermath of large scale conflict can be very diverse and even contradict the wishes of other victims or the group as such. What are their interests and what are their views on transitional justice including possibilities of remedy and reparation? In this context specific attention is given to the impact of violent conflict on women and children.

Throughout the course critical attention is paid to the following justice mechanisms: apologies and forgiveness, memorialization and commemoration, truth telling and truth commissions, pardons and amnesties, compensation, restoration, restitution, international and regional criminal courts and tribunals, lustration and vetting. The analysis will be concluded with a discussion of the various justice mechanisms and their potential to contribute to (or jeopardize) sustainable peace. How effective are these approaches in breaking cycles of violence? Can they bring reconciliation?

In addition to issues such as justice and reconciliation, other matters are also significant in post-conflict societies as they greatly affect the consolidation of peace and stability. Justice and reconciliation only form one pillar of reconstruction, but also in other areas constructive action is required. Such other areas of concern include, for instance, security, wellbeing, and governance. The course therefore looks into the process of reconstruction and discusses which actions are required in order to move from the precarious early stages of post conflict transition to a more sustainable situation which allows for the consolidation of peace and stability.

Several lectures will be held during this course. These lectures will be used to illustrate the discussed materials and to provide the participants with a deeper understanding of the subject matter by presenting the linkage between theory and (research) practice. During the lectures, various guest speakers will address the subject matter from the practitioner's perspective. In addition, we will screen a number of documentaries that will be analyzed during the post-discussion. We hope that, through these documentaries, the subject matter of this course will become more accessible and less abstract.

Case studies play an important role throughout the course and we will therefore pay attention to a wide variety of cases including The Holocaust and other cases of genocide (Armenia, Australia, Cambodia, Rwanda, Srebrenica, Darfur, etc.). Although cases of genocide will play an important role in this course, the caseload is certainly not limited to genocide and other violent conflicts will be addressed as well. Here one could think of the following cases, Chili, Argentina, Guatemala, Indonesia, East Timor, Iraq, Syria, Congo, Central African Republic, etc. Not to forget the torture practices of the U.S.

Course objectives

- An understanding of transitional justice and how to deal with grave historical injustices from the past. Although the course addresses the roles of many different actors, the role of the victim will receive more substantial attention.
- To examine different approaches to post-conflict justice (retributive, restorative and transformative approaches) and their policy implications.
- To provide for a critical overview of different instruments for transitional justice, such as, apologies and forgiveness, memorialization and commemoration, truth telling and truth commissions, impunity, pardons and amnesties, compensation, restoration, restitution of property (especially looted and stolen art), international and regional criminal courts and tribunals, lustration and vetting, etc. and to examine their impact and effectiveness.

- An understanding of issues in post-conflict reconstruction which focuses on the challenges (military, political, and social) that post-conflict societies are facing and how they impact on the consolidation of peace and stability.

Prerequisites

Social and Sustainable Entrepreneurship

Full course description

Interest in the concept of social and sustainable entrepreneurship has been sparked over the last two decades due to frustration with inefficient, ineffective and failed action of government and philanthropic bodies, as well as the socially destructive behaviour of many businesses. An explicit and central social/sustainable mission, innovation, creativity and a strong market orientation are the distinguishing features of social and sustainable entrepreneurship. Social and sustainable entrepreneurs are committed to furthering a social and/or sustainable mission, and rank social, environmental or cultural impact on a par with, or above, profit. At the intersection of business, government and not-for-profit organisations, these social and sustainable entrepreneurs are now visible and having an impact on a global scale.

This course will provide you the opportunity to learn how you can apply your knowledge and skills to address complex sustainability problems. This course is structured around experiential problem-based learning, providing you the opportunity to synthesise theory and practice as you develop an idea for your own social/sustainable enterprises. Topics will include: critically reviewing concepts; user centred-design of social and sustainable enterprises; frameworks for understanding and strategizing; understanding and reporting social and environmental impact; and cross-sector

Course objectives

On the successful completion of this course you should be able to:

- Critically reflect on social and sustainable entrepreneurship theory and practice
- Identify and evaluate social and sustainable entrepreneurship opportunities
- Develop a strategy for a social/ sustainable enterprise
- Conduct primary research and analyse primary and secondary data in the field of social and sustainable entrepreneurship
- Prepare and present documentation to pitch a novel enterprise idea
- Learn to cope with the chaos and complexity of doing social and sustainable entrepreneurship in the real world.

Prerequisites

Students should be in at least their third semester to take this course.

Additionally, it is recommended that you have taken one of the following course prior to taking this course:

SSC2055 Entrepreneurship; SSC2036 Introduction to Business Administration and/or SCI1016 Sustainable Development

Recommended reading

- eReader with papers & Harvard Business cases (You need to pay for your cases, approx. €15).

Foundations of Cognitive Psychology

Full course description

The mechanization of thought (i.e. regarding the human mind as an information processing machine not unlike a computer) has always repelled and attracted psychologist and philosophers after the scientific revolution of the 16th and 17th centuries. As a result, human thought wasn't always the topic of psychology, especially at the time of the rise of radical behaviorism in the early 20th century. Anything referring to mental processes was not to be used in explanations of human behavior. However, with the inventions of machines that could think in combination with the failure of behaviorism to account for even the simplest of human behavior, the mind was back in psychology. And back with a vengeance. During the '60 and '70 of the 20th century information processing theory became the leading paradigm in cognitive psychology. Information processing theory deals with how people receive, store, integrate, retrieve, and use information. The present course is concerned with theoretical and empirical perspectives on human cognition, perception and the experimental methods to study cognition and perception. Eleven basic topics of cognitive science/ psychology are discussed using a Problem Based Learning format. The topics studied in the course are amongst others: The history of the study of the human mind as information processing machine, schema's, scripts, plans, and frames, knowledge representation, top down and bottom up processing, semantic networks and spreading of activation, intelligence and individual differences, etc.

Course objectives

- To give students on overview of the study of the human mind as information processing machine over time and to provide insight into the foundations of cognitive science.
- To make students familiar with the basic concepts used in theories on human information processing and the experimental designs used in cognitive psychology.
- To provide an insight into the character of cognitive processes; various forms of perception, learning, thinking, etc.

Prerequisites

SSC1005 Introduction to Psychology or SCI2036 Artificial Intelligence.

Recommended reading

- E-reader available on Student Portal.
- Several chapters from basic cognitive psychology textbooks (There is not one single basic book that covers all topics, hence the chapters of several books are available as an E-Reader or hardcopy at UCM's reading room and the UM library)

The Psychology of Individual Differences: Personality and Intelligence

Full course description

This course will provide you with knowledge on the most important scientific theories and empirical findings on personality and intelligence. You will learn why and when a person behaves in a different way than someone else and how personality impacts what will happen to us in our life. We will also discuss practical applications of theory and research findings and learn to apply measurement techniques for assessing individual differences.

You will learn about different theoretical conceptualizations and measurement approaches of personality and intelligence. Based on the purpose of the assessment, different methods may prove more or less useful. You will also discover different explanations for why people differ in their personality and their level of intelligence. We will look at physiological, evolutionary-genetic as well as contextual explanations. Further, you will take a closer look at the relationship between personality, intelligence and meaningful life events. What personality traits are important for marital satisfaction and what characteristics make us become a criminal? But also - how does becoming a parent or getting a new job change our personality? Lastly you will be introduced to real life applications of knowledge on personality and intelligence. Specifically, we will discuss how this knowledge is used in clinical settings (e.g., when having patients with a personality disorders) and in organizational settings (e.g., for personnel selection purposes).

Course objectives

- Gain insight into the two key subdivisions in the study of human individual differences: personality and intelligence.

Prerequisites

SSC1005 Introduction to Psychology.

Sociological Perspectives

Full course description

This course offers an introduction to the social scientific discipline of sociology. The course focuses on various foundational areas of sociological research and theorizing in order to explore how sociologists approach the study of various social processes, practices and problems. Some key questions explored include: What is Society? How are individuals shaped by society? To what extent can and do individuals shape society? How have different societies developed historically? How do societies distribute wealth, income and other resources? How do societies establish particular kinds of political authority and power relations? How are cultural identities, values and beliefs reproduced over time? What are the sources of conflict, consensus and change in society? Working from a global comparative perspective, the course will introduce students to different strands of sociological theorizing, the distinctive levels of sociological analysis, and some of the most central areas of sociological investigation, such as class, race/ethnicity, gender, sexuality, culture, media, education, marriage, work and globalization. Periodic attention will be given to applying the sociological lens to the analysis of pressing social issues and problems in the contemporary world, such as inequality and violence.

Course objectives

- To become conversant in the foundations of sociological thought and theory.
- To gain understanding of the primary areas and methods of sociological analysis.
- To be able to apply sociological concepts and theories to the study of pertinent social problems.
- To reflect on the relevance and utility of sociology in the 'everyday' world and public policy-making.

Prerequisites

None.

Protection of Civilians in Armed Conflict

Full course description

The large number of civilian casualties and the refugee movements in the Syria conflict have drawn renewed attention to the often dramatic plight of civilians during armed conflicts, and to the serious problems in protecting them against the effects of hostilities. After an introduction of the main characteristics of contemporary armed conflict we will have a closer look at prominent norms of international humanitarian law aimed at protecting civilians (*ius in bello*), such as the principles of distinction and proportionality. We will examine issues and dilemmas concerning their application in today's war zones. Attention will also be paid to the relevance of human rights norms.

An important part of the course will be devoted to the practical contributions external actors are trying to make for the physical and humanitarian protection of civilians caught up in conflict. Based on examples from the field this will primarily cover methods employed by UN military and police forces and international humanitarian organizations such as the ICRC and UN agencies. Protections against attack, access for life saving humanitarian assistance and the specific situation of internally displaced persons will be examined more closely. We will briefly also look at contributions of UN human rights mechanisms, for example in the area of security detention.

The course will then zoom in on the protection provided by asylum to persons escaping from conflict and persecution, by discussing the international criteria for refugee status. We will examine the challenges involved in managing large scale refugee movements in a protection sensitive manner. Approaching the overall theme from a holistic perspective, the course will explore to what extent (the threat of) prosecution and punishment may contribute to the prevention of international crimes. We will focus in this context on the activities of the International Criminal Court. Finally, due attention will be paid to measures by states and organizations for the protection of civilians against terrorist acts, and possible tensions with the requirement to comply with norms of international law.

Course objectives

- To provide a substantive introduction to the protection of civilians in situations of armed conflict by examining relevant international norms and the practice of states and international organizations in an evolving context.

International Trade Law: Globalisation Trade and Development

Full course description

The recent revival of (economic) nationalism in various parts of the world, including some traditional towers of trade liberalization, has been a wake-up call to many who believed that the failure of the so-called Doha round of international trade negotiations conducted under the auspices of the World Trade Organization (WTO) to deliver improved global trade rules and new trade deals was the most significant challenge this organization was facing at present. With the entry into office of the new US administration in January 2017 arguably a greater challenge has arisen for the WTO and its global membership. Praising trade protectionism and bilateralism and attacking the independence of the WTO dispute settlement, generally recognized as the most successful and effective international dispute settlement system in history, the US seems to threaten the very basics of this multilateral rules-based system that go far beyond the failure of the Doha round of negotiations. To understand the context - and content - of these developments, comprehension of the main institutional and substantive aspects of the law and policy of the WTO developed over the past decades is indispensable. It will also enable students to understand preferential trade agreements that have been mushrooming as a result of the failure of the Doha round to reach multilateral consensus, thereby shifting trade negotiations partly away from the WTO. Depending on the political and economic position of the involved states, some of these agreements may well set new standards for future international trade (and investment) regulation. This applies to agreements such as the Trans-Pacific Partnership (TPP) involving eleven countries around the Pacific incl. Canada, Australia, Japan

but also Chile and Vietnam (though the US withdrew from this agreement right after the new administration had taken the office); Canada - EU Trade Agreement (CETA) but, if it goes ahead, also the US-EU Transatlantic Trade and Investment Partnership (TTIP). All these agreements contain various WTO plus arrangements and will be of importance for future developments in international trade law and policy. By taking this course, students will gain understanding of not just the WTO but also of many other recent developments in the world. This introductory course on WTO law and policy is built around a number of true-to-life international trade problems represented in the form of case studies. The course addresses six themes. It starts by examining the phenomenon of economic globalization and, the arguments for and against free trade, as well as the role of law in international economic and trade relations. Secondly, the course looks at the history, objectives, structure, functions, decision-making and membership of the WTO. Thirdly, the WTO's unique system for the resolution of trade disputes is discussed. Fourthly, the principles of non-discrimination in WTO law (namely the obligations of most-favoured-nation treatment and national treatment) are examined. Fifthly, the WTO rules on market access, dealing with tariff barriers and some non-tariff barriers to trade in goods and services are addressed. Finally, the provisions of WTO law that aim to balance trade liberalization with other societal values (such as health, environment, development and regional integration) by means of exceptions to WTO obligations are discussed.

Course objectives

- To gain a better understanding of the World Trade Organization and its basic legal framework.

Prerequisites

SSC2024 International Law

Recommended reading

- Van den Bossche, P., *The Law and Policy of the World Trade Organization: Text, Cases and Materials*, Third edition (Cambridge University Press, 2013), selected chapters and/or sections only.
- *The Legal Texts - The Results of the Uruguay Round of Multilateral Trade Negotiations* (Cambridge University Press, 1999, reprinted 2007). The relevant WTO legal texts can also be found on the WTO website.

Introduction to European Integration

Full course description

This course analyses critically the evolution of European integration from the late 1940s until today. It first seeks to explain and rationalize the birth of the European Communities in the 1950s, their slow development in the 1960s and 1970s as well as the revival of the integration process from the mid 1980s. After having taken a close look at European integration in the East during the Cold war time, the course covers a chronological and detailed analysis of the Treaties of Maastricht, Amsterdam and Nice, the death of the notorious European Constitution and the final adoption of the Treaty of Lisbon. It also provides space for the analysis of current developments, such as Brexit or the Rule of law crisis, as they are unfolding. The course will enable students to develop their own views on whether the current European Union can be labelled as a success or not, and to assess the numerous critical views expressed in the media on the future development and direction of the European integration process.

Course objectives

- To examine the development of European integration during the 20th century.
- To examine the way Europe operates in the 21st century as well as discuss the problems and challenges it currently faces.

Prerequisites

None.

The Economics of Information

Full course description

An information good – such as for instance a book or software – significantly differs from a usual good, since it has a very high fixed cost for producing the first copy and a negligible marginal cost for producing every additional copy. Yet, markets of information goods obey the main principles of economic theory.

The aim of the course is to study the market of information goods. We will analyze topics from the theory of information goods, such as versioning, bundling or lock-in. The requirement for the course is a solid background in microeconomics.

Course objectives

- To understand and analyze the markets of information goods

Memory

Full course description

In our everyday cognitive functions we rely heavily on multiple types of memory. This includes seemingly trivial actions, such as remembering your grocery shopping list, to navigate through Maastricht, and to have a sense of your own identity. How are memories formed and maintained in our mind and brain? Do we have multiple memory systems, or just one memory mechanism from which the richness of memory is derived? What happens if our memory fails us, when we forget or when we remember falsely? This course investigates the cognitive correlates (information processing) and neurobiological mechanisms of declarative, or explicit memory. We will discuss a number of cognitive models, including Baddeley's Working Memory model, the Modal model, and interference theory in forgetting. In addition, we will discuss the role of long-term potentiation (LTP) in memory, research for which Prof. Eric Kandel received the Nobel prize in 2000, as well as how different brain areas contribute to memory. Throughout the course, we will discuss relevant methodological issues regarding memory research. Importantly, please be aware that brain anatomy and function are an important part of this course; an interest in and understanding of these fields at the level of Introduction to Psychology or higher is highly recommended. In addition to the tutorial meetings, students will complete a practical and paper assignment in which memory performance of real subjects is assessed.

Course objectives

- To help students acquire knowledge of recent as well as classic theories in the field of memory acquisition, consolidation and retrieval, for short- and long-term declarative memory.
- To provide knowledge of the principles of forgetting, reconstructive processes and false memories.
- To provide knowledge about the biological basis of memory acquisition, storage and retrieval.
- To familiarize students with relevant basic brain anatomy.
- To provide experience with common experimental designs in memory research.

Prerequisites

SSC1005 Introduction to Psychology; SCI2034 Brain and Action is strongly recommended.

Globalization and Inequality: Perspectives on Development

Full course description

This course critically focuses on structural issues of development on a global scale. Globalization refers to the increasing interdependence of markets, states and civil societies and the resulting effects on people and their environment. By also focusing on inequality, the structural differentiation among actors in terms of access to means, opportunities and resources, issues of (re-)distribution are taken into account as well. The course investigates inequalities and interdependencies on a global, international, national and local level, while considering the role of public, private and civil society actors. Thus, it aims to understand the underlying development processes and unlock the ongoing debates. The course focuses on the following themes: globalization and development; the Global Goals for Sustainable Development; a history of inequality; the agencies of development; democratization, human rights and development; health and development; global migration and remittances; and food security, natural resources and global crises.

Course objectives

- To understand and analyze issues of globalisation and inequality from several disciplinary perspectives and recognise links between various dimensions of globalisation, inequality, poverty and development.
- To understand theories, concepts and historical roots of global social, political and economic inequality as well as understand contemporary issues in development and the developing world, in particular:
 - Democratisation, human rights and development
 - Health and development
 - Global migration and remittances
 - Food security, natural resources and global crises
- To gain knowledge of the main global and international actors and networks in the field of development, including their aim, impact and effectiveness
- To analyze changes in 21st century geopolitical perspectives with regards to development,

Bachelor University College Maastricht

such as the growing impact of BRICS countries.

- To develop insight in the relations between the various global crises and recent development policies
- To use the accumulated understanding and knowledge to envision future development scenarios.

Prerequisites

Academic Skills Training or equivalent University-level writing skills preparation.

The Law of the European Institutions

Full course description

This course focuses on the institutions of the European Union. At the same time, this course provides an opportunity for students to be exposed to legal thinking. Law is central to the process of European integration, and it plays a greater role in European affairs than it does at national or international level. It is accordingly essential for students to become familiar with the ways of legal thought and legal reasoning, if they want to understand fully the European integration process, and European matters more generally.

Course objectives

At the end of the course, students should have acquired adequate knowledge, practical skills and a critical understanding with respect to the following:

- The role and significance of law in the European integration process.
- The legal foundations of the European Union (EU) (as set out in the Treaties).
- The institutions of the EU, their historical evolution and the horizontal relationship between them (as reflected in decision-making procedures).
- The vertical relationship between the EU and the Member States (including the principles of supremacy, legality, subsidiarity, proportionality and loyalty).
- The implementation and enforcement mechanisms of EU law (infringement proceedings, enforcement through national courts, review of EU action).
- The position of the individual as a holder of fundamental rights and a citizen of the Union.

In addition, throughout the course the students should have become familiar with legal thinking and legal reasoning, and should in particular be able to:

- Find legal instruments in paper or electronic format.
- Keep abreast of legal developments.
- Read a legal document and extract the relevant information from it.
- Construct a legal argument on a basic issue of EU law.
- Use EU law to give an opinion on a legal problem.

Prerequisites

SSC1007 Introduction to Law and at least one of the following courses: SSC2060 Comparative Constitutional Law (SSC2012 Comparative Government) or SSC2024 International Law.

- [Introduction to Law](#)

Recommended reading

- A copy of the EU Treaty and of the Treaty on the Functioning of the EU. These can be downloaded from <http://eur-lex.europa.eu/collection/eu-law/treaties.html> or they can be found in Foster (ed.), Blackstone's EU Treaties and Legislation (last edition).

American Foreign Policy

Full course description

Everyone appears to have an opinion on American foreign policy, however, often such opinions are based on emotion or rhetoric. This course does not want students to be less critical of the United States, rather it strives to inform and educate students on the history, process and sources of American foreign policy, so that opinions are based on a sound footing.

The course is divided into four sections. The first section will focus on the field of foreign policy analysis as a subfield in International Relations. An overview of the various analytical perspectives on U.S. foreign policy will be covered. This first section will also consider the importance of examining American foreign policy in today's world.

Section two will concentrate on the history of U.S. foreign policy, covering such events as the Founding of United States, World War I, the interwar years, World War II, the making of a Superpower, the Cold War, the Post-Cold War world, September 11th and ending with recent world events, such as the Iraq War and the Global War on Terror.

Part three will examine the politics and the policy-making process of American foreign policy. Topics for discussion in this section will include the institutions involved in the policy making process, such as the President, various bureaucracies like the State Department, the Department of Defense and the CIA, plus Congress and the Courts. This section will also consider the role the American public plays in the process of making U.S. foreign policy. The final part of this course will study the instruments used to implement American Foreign Policy. This section will include a discussion of America's use of open or diplomatic instruments, secret instruments, economic instruments and also its military instruments. This final section will end with a task that discusses the future of American Foreign Policy.

Course objectives

- To understand the history, the political process in which policy is made and the policy content of American foreign policy.

Prerequisites

SSC1006 International Relations or SSC1025 Introduction to Political Science and at least one 2000-level Social Sciences course.

Introduction to Law and legal Reasoning

Full course description

This course aims to introduce students to the general content of modern law and to the discipline of legal reasoning. These two go together. Law cannot be fully understood in abstraction of the particular way that lawyers, judges and other expert operators of the legal system look at it. Coming out of the course, students should be able to understand what law is and how it is different from (and similar to) morality, identify the main branches of Law and their basic institutions, recognize and differentiate the principal values underlying those branches and understand the nature of legal reasoning and be able to apply it to legal problems.

It is often assumed that to study law means essentially to study the law of a particular jurisdiction. A Dutch lawyer studies Dutch law and a German lawyer studies German law, and there is little that they share beyond the name of their chosen profession. This picture is misleading. Despite the fact that every country establishes its own legal system, there is much less diversity in law than what one would imagine. A key theme of this course is that law arises naturally as a solution to various social problems and, to the extent that human societies face the same problems, similar responses appear almost everywhere. Even though details may vary, contract, property, inheritance, marriage, constitutions and crimes exist in almost all modern societies. Instead of focusing on specific sets of rules like the Dutch Civil Code, or the French Criminal Code, this course focuses on these widely shared problems and widely shared institutional responses.

With regards to legal reasoning, the course asks students to create a tax, which will help them understand how law can be used as a policy tool for regulatory and redistributive purposes. In this connection, the course will also include a “workshop” where students will be asked to go through a high profile judgment and identify the logical moves taken by a court to justify its decision.

Course objectives

- To introduce students to the basic areas of law (contracts, property, torts, criminal law, international law etc.).

Bachelor University College Maastricht

- To familiarize students with the methods of legal reasoning.
- To illustrate to students how law arises in response to social problem and how it is different from other domains such as politics and morality.

Prerequisites

None.

Recommended reading

Introduction to Political Science

Full course description

This course will be an introduction to a field of study that is often subdivided into five or more disciplines. The subdivision list includes International Relations, Comparative Government, Political Theory/Philosophy, Public Policy/Public Administration and finally a state-centric discipline which depends on your country of origin (i.e. American Politics or Dutch Politics to name two).

The course will start with a simple examination of the meaning of the world “politics.” How much of politics is really about solving distribution problems? In other words, a limited amount of resources in society must be distributed in some equitable manner. After this initial discussion, the course will move to consider the central themes of Macro politics, with particular emphasis on the classification of political systems, political ideology and political authority.

Themes in Micro politics are addressed in the second half of the course. Micro politics refers to the study of how individuals “fit” into their political system. Micro political topics will include political socialization, political groups, elections, voting, political parties, party systems and political leadership. The course ends with a look at system performance and how to bring about change in political systems when performance is wanting.

To help students understand and relate to the political realm in which they exist, each student is required to embark on an individual research paper about their country of origin. It is hoped that this assignment will not only allow students to apply concepts learned in the course but also prompt them to expand their knowledge of how to use resource materials available via the library.

Course objectives

- To introduce students to the concepts, ideas and theoretical underpinnings which constitute the study of government and politics.
- To outline the scope of political science and its central themes.
- To provide the intellectual skills necessary for coming to informed judgments about political issues.

Advertising: Marketing Communications of Brands

Full course description

This course covers foundations of brand management and marketing communications (including advertising). The course will take a strong consumer-based focus, therefore the foundation of branding and advertising in consumer behavior and consumer psychology theories will be discussed. We will discuss theory that is at the foundation of branding and advertising and then apply it through team assignments on students' chosen brands.

The course consists of two parts:

- In the first part we will deal with brand management: In the brand management part the nature of brands in consumers' minds, the concept of brand equity and instruments to build and leverage brands will be discussed.
- In the second part we will focus on integrated marketing communications. In the integrated marketing communications part we will have a look at the concept of Integrated Marketing Communications, the communication process and theories of consumer behavior and response.

Course objectives

- To give students an introduction to the communication of brands to consumers. On the one hand a strong theoretical foundation will be built by studying the textbook chapters and journal articles (E-reader). On the other hand, we will continuously translate this theory to practice, by means of short articles from the business press (E-reader), brief student presentations, and one larger group project.
- Next to being instructive and interesting, this course can also be a lot of fun. We are confronted with brands and advertising every single day, and it is challenging to explore the processes by which this is done.
- To have an in depth understanding of the theories concerning branding, marketing communication and consumer behavior, and of the implications of these theories for marketing management. Skills that will be developed/ enhanced during this course are: presentation skills, teamwork skills, writing skills, analytical skills, reflection skills and creativity skills.

Public Policy Evaluation

Full course description

This course provides students with an academic and at the same time practical and 'hands on' approach to the study of public policy and more in particular, to the professional practice of policy analysis and evaluation. Public policies can be described as "a course of government action or inaction in response to public problems" such as insufficient access to health care or education, environmental degradation, threats to workplace safety, corruption, overcrowded highways or air pollution (Kraft and Furlong 2010:5). Problems range from relatively simple to highly complex and manifest from the local to the national or global levels. They can reflect conflicts over causes, solutions, problem definitions as well as over fundamental human values. Decision-makers that take final decisions on these issues need to be informed by sound evidence based policy analysis and evaluation that has carefully weighted, crafted, prescribed and evaluated the policy alternatives. This is important as the decisions taken do not only affect people's lives, but also influence society's key values. It is the task of the policy analyst / evaluator to provide sound evidence, analysis and advice. To acquaint students with, and prepare them for such undertakings, this course is designed to foster critical thinking and understanding about public policy and possible alternative courses of action by deliberating and analyzing the key concepts, models, approaches and methods of policy analysis & evaluation, and practicing some of its basic skills. In the first week of the course students explore what policy analysis & evaluation actually is. It intends to shed light on the role of power, politics, institutions and actors in the policy making process. Subsequently, in the second week the art of problem structuring is explored. In the third week students will be introduced to working with evaluative criteria and choosing policy options for formulating policy advices. With the knowledge gained in these first three weeks students will work in small groups to prepare and present a 'hands on' a policy advice on a real life country case. Finally, just before the midterm exam, students are

introduced to two frequently used methods of policy analysis and evaluation: cost benefit and cost effectiveness analysis. The midterm exam consists of two parts: an individually written policy memorandum on a given topic (part 1) and, on the basis of that memorandum, a team role play (part 2 of midterm). After the midterm the focus shifts from having gained the basic knowledge for policy analysis and evaluation (problem structuring, stakeholder analysis, choosing evaluative criteria and using them to benchmark and weigh the different policy alternatives) to exploring policy evaluation approaches in more depth. Students will be introduced to plan, process and outcome evaluations on the basis of the realist or theory-based evaluation approach. They will work in small groups on another real life case to actually carry out and present a plan (and or) process evaluation themselves. Finally, ethical and accountability aspects of policy analysis and evaluation, as well as the role of the public in this process are explored. The course is built around 7 cases and 7 lectures by both academics and professional practitioners that share their knowledge and experiences with the students. This together with studying academic and policy literature as well as the 'hands on' work on evaluation cases, provide the main guidance for the student's learning process in this policy analysis & evaluation course.

Course objectives

- To develop a critical analytical approach to public policy evaluation, analysis and public policy making.
- To provide students with a basic understanding of the key concepts, approaches, models and methods of public policy analysis & evaluation.
- To develop the basic skills needed to conduct public policy analysis & evaluation and to communicate the results effectively.
- To provide students with an understanding of the roles and ethics of the policy analyst/evaluator in the policy process.

Prerequisites

At least two 2000-level Social Sciences courses.

Recommended reading

The course combines book chapters from state of the art text books on policy analysis with articles from academic journals and real life case study material from practice, next to youtube videos and short documentaries. Textbooks from which partial chapters are used:

- Kraft M.E and Furlong S.R. (2013) Public Policy Politics, Analysis and Alternatives, CQ Press, SAGE
- Guess G.M. and P.G. Farnham (2011), Cases in Public Policy Analysis
- Weimar L. and Vining A. (2011) Policy Analysis, 5th Edition, Longman
- Weiss C.H. (1998) Evaluation (2nd ed.), London: Prentice-Hall.

Next to that book chapters, journal articles, youtube videos and short documentaries will be studied.

Organization Theory

Full course description

Organization theory is a field of social science that has traditionally been occupied by various disciplines. Economists, sociologists, (social) psychologists, political scientists and cultural anthropologists all have entered the debate in explaining the role and functioning of organizations and their members.

The course starts off with the fundamental question: Why study organizations? Why study theories about organizations and organizing? Is there any immediate practical value to such studies? From then on we deal with variety of topics such as design thinking, basic organizational design configurations; organizational culture; environmental contingencies; radical versus continuous change; the impact of institutions; managing innovation in and between organizations; and new organizational forms such as virtual and meta-organizations.

Course objectives

- To provide a birds'eye view of organization theory from its historical roots to the main contemporary issues and controversies.
- To give students an insight into recent theoretical developments in organization theory to bear on organizational management and professional practice.

Rights of the Child

Full course description

This course intends to provide a basic introduction into the root causes of large-scale and serious violations of children's rights all over the world, including in high-income states. 'Root causes' refers, on the one hand, to unmet basic developmental needs of children and, on the other hand, to harmful child-rearing practices in the present and the past. Understanding these root causes, their historical context, and their serious consequences for individuals and society, is seen as essential for further (specialized) study in children's rights (related to, e.g., migration, trafficking, armed conflict, child labor, international monitoring, etc.).

Therefore, this course aims to introduce students, on an elementary level, into the science of Early Childhood (Attachment and brain development) and the new unified science of human development based on the ACE Study (long-term consequences of Adverse Childhood Experiences, that is, of childhood trauma and toxic stress), and to coach students to relate these new fields of academic knowledge to the universal normative State-Parent-Child framework of the CRC (Convention on the Rights of the Child, UN 1989).

Course objectives

- To provide an introduction to interdisciplinary concepts essential to the study of children's rights (human rights and psychology).
- To provide an introduction to the convention on the Rights of the Child (content, interpretation, implementation and monitoring).

European Foreign Policy

Full course description

In order for the EU to ever be truly a federation there should be a single currency and a common foreign policy. One of these two criteria has been met in most of the Member States of the EU. Does this mean that a major step has been taken on the way to a federation? What of the common foreign policy requirement? Is there one foreign policy or many, at least when crises like the Iraq war occur? What is the probability of a European Foreign Policy akin to that of the USA ever forming? These are some of the questions the course will tackle.

The course is divided into two sections. The first section will start with a focus on the importance of European Foreign Policy for foreign policy analysis and vice versa. It will also consider what theories in International Relations can help explain the conduct of European Foreign Policy. This section will then move on to consider the institutional framework of the EU's foreign policy, the role of the Member States in the formation of policy and then finally consider in more detail the main external relations policies themselves. The main policy areas include Common Defense and Homeland Security Policy, Economic and Trade Policy and Enlargement Policy. The second section deals with the important regions and particular states that the European Union has established strong foreign policy relationships. These important regions and states include the United States, Russia, the Developing world and Emerging Economies. The second section ends with a consideration of the EU's future role as a global player.

Course objectives

- To understand the history and the complexity of European Foreign Policy.
- To understand the political-institutional process in which EU Foreign Policy is made.
- To grasp the content of European Foreign Policy.
- To understand relations with important regions and particular states that the European Union has established strong foreign policy relationships.

Prerequisites

SSC1025 Introduction to Political Science or SSC1006 International Relations and SSC3030 European Institutions or SSC1009 Introduction to European Integration.

Human Rights: Principles and Polemics

Full course description

There is the expectation that in an increasingly multicultural and postsecular world, human rights provide us with some common ground: however turbulent and changeable social life may be, we can all demand and enjoy the protection of human rights. This expectation might turn out to be misguided. Even within the “West”, there is intractable disagreement as to the content and implications of human rights. Activities that are seen as human rights violations by some legal systems are tolerated by others. Even more, activities that are seen to be human rights violations by some legal systems are seen to be rightful exercises of freedom by others. How deep are these disagreements? Can they be overcome? This course will provide students an advanced introduction to the field of human rights by exploring and parsing out disagreement on divisive and polemical issues. The course analyzes how a variety of key issues of legal concern, such as hate speech, social welfare, dignity, the death penalty and discrimination, are addressed by a variety of domestic and international institutions, such as the European Court of Human Rights, the UN and the Supreme Court of the United States.

This course is predominantly legal in character. That means that social scientific explanation and understanding will not be the focus of the course. Rather, the course will concentrate on analyzing the justification of legal decisions in accordance with legal rules and principles.

Course objectives

- Provides students with an advanced introduction into human rights.
- Introduces key concepts that are used within all forms of human rights discourse.
- Familiarizes students with polemics in the field of human rights
- Provides students and opportunity to engage with the intricacies of legal reasoning.
- To encourage critical thinking and appreciation of differences within the field of human rights.

Public Economics

Full course description

Public Economics (or Public Finance) deals with the formulation, execution and effects of government policy, or more generally with non-market mediated policies. Government and government-like organisations differ from other organisations because they can use legal coercion as a means for the realisation of their aims. The typical allocation mechanism for scarce resources in markets is the price mechanism, which - under particular circumstances - aggregates information and preferences of many different individuals in an efficient way. In many instances, however, the necessary requirements for efficient market solutions to the resource allocation problem are not given. This is where the public sector comes into play. When the price mechanism is not available or does not yield an efficient or otherwise desirable solution to an allocation problem other mechanisms for aggregating information and references are needed to allocate scarce resources and coordinate economic and social behaviour. This course provides basic knowledge of the functioning and the economic significance of the public sector with an emphasis on international aspects. Some of the topics to be dealt with in the course are: governmental decision-making on the national and international level, role and management of the state in times of globalisation and transnational threats like global warming and international terrorism, important issues pertaining to government

expenditure, taxation, and other activities (like public goods, international institutions, education, social security, health care), and mechanisms of political influence (elections and lobbying). These issues will be analysed from a normative - welfare economic - as well as from a positive - explanatory - perspective, with emphasis on the relevance and limitation of traditional economic theory.

Course objectives

- To provide a basic knowledge of the functioning and the economic significance of the public sector, with an emphasis on international issues.
- To be able to reflect and recognize the strength but also some of the limitations of traditional economic theory.
- To be able to critically assess political and economic discussions pertaining to the public sector.

Principles of Economics

Full course description

This course introduces basic economic ideas and concepts. In the lectures, we start with markets, behaviour on markets, outcomes of markets, and different market forms. Here, we use game theory

to analyze situations with strategic interaction (e.g., oligopolistic competition). We then turn to the idea of comparative advantage as an explanation for trade patterns. While this first part of the course mainly covers microeconomic topics, the second part is devoted to macroeconomics. Here, we first consider macroeconomic indicators (e.g., GDP) and then study economic fluctuations (e.g., the Great Recession of 2007–2009) as well as economic policy. Further topics (e.g., the monetary system) are covered in the tutorials. Through presentations and special debates (e.g., on Behavioral Economics), the tutorials give the opportunity to apply and reflect on some of the contents of the course.

The course provides a foundation for many other economics courses at UCM. It is a strict or recommended prerequisite for courses such as SSC2020 (The Economics of Information), SSC2038 (International Macroeconomics), SSC2043 (Development Economics), or SSC2048 (Intermediate Microeconomics).

Course objectives

- Get acquainted with basic ideas and concepts to understand economic debates and be prepared for possible further economics courses.

Prerequisites

Standard high school knowledge of basic mathematical concepts such as solving equations, reading and working with graphs, and manipulating inequalities is expected. Students who lack this knowledge are advised to take SCI1010 Basic Mathematical Tools first.

In economics, no prior knowledge is assumed.

Foreign Policy Analysis

Full course description

The course starts with the analysis of International Relations theories and their applicability in foreign policy decision-making. Main IR theories will be re-visited shortly in order to refresh our students' memories about these theories. Then the course deals with the actors, structures and analyses of foreign policy, discusses rational and psychological models and the implementation of foreign policy, the role of media and public opinion, the importance of national security and economic issues, and the effect of the duties beyond borders. In the course, students will discuss case-studies extensively. In each meeting, the theoretical chapter will be combined and applied to a concrete case-study. Students will analyse world affairs not only from the view point of the decision-makers, but also media, public opinion and third parties.

Course objectives

- To learn several aspects of foreign policy-making such as its distinctive nature, its features and its processes.
- To discuss various models and theories in order to understand how to study foreign policy making as an academic discipline.
- To get insights about the decision-making processes, factors, actors, and also the implementation of decisions.
- To get familiar with numerous cases of foreign policy decision making.
- To practice how to make and analyse foreign policy events and possible scenarios.

Prerequisites

Social Movements

Full course description

This course is designed to introduce students to the sociological study of social movements. An overview of the field will be provided by identifying key concepts, theories and methods through examination of a variety of case studies. Salient themes addressed will include: democracy, identity, globalization, civil rights, environmentalism, gender, sexuality, class and ethnicity/race. While much attention will be placed on social movements within Europe, a global-comparative perspective will be periodically emphasized. The over-arching goal of the course will be to reveal the ways in which social movements work to both produce and resist social change. Some of the main questions addressed in the course will be: What is a social movement? Why do people join social movements? How do movements gain/lose momentum? What is the relationship between social movements and democracy? And, under what conditions do social movements 'succeed'?

Course objectives

- To become conversant in the major questions driving social movement research.
- To become conversant in the key theories and concepts driving social movement research.
- To become conversant in the primary methods driving social movement research.
- To evaluate and assess social movement research in a critical and constructive manner.
- To design a case study and initiate an original empirical study of social movements.
- To reflect on the relevance and utility of studying social movements.

Prerequisites

SSC1029 Sociological Perspectives and at least one of the following: SSC1025 Introduction to Political Science, SSC1003/SSC2065 Theories of Social Order, SSC1006 International Relations, SSC2019 Social Psychology or SSC2028 Classical Sociology.

Comparative Constitutional Law

Full course description

In this course, we study basic concepts of constitutional law. Particular attention is devoted to: the functioning of a state, different systems of government and the concept and application of the principle of separation of powers. Furthermore, different electoral systems and different mechanisms governing the relations between the executive and legislative branches of government will be discussed. The issues of federalism and bicameralism will be analysed. Finally, the rules governing constitutional review will be discussed, together with the issue of fundamental rights protection. These themes will be addressed with regard to the American, German, French, British and Dutch legal systems.

Course objectives

- To get students acquainted with the political and constitutional systems of a number of European countries and the United States.
- To introduce students to the overarching concepts of constitutional law.

Prerequisites

SSC1007 Introduction to Law and Legal Reasoning or SSC1009 Introduction to European Integration or SSC1025 Introduction to Political Science.

Corporate Finance: Behavioural Foundations

Full course description

Today's business environment is more complicated than ever. This is illustrated by the recent financial crises and topics like climate change that increasingly affect corporate decision making. Corporate finance deals with the financing and investment decisions made by the management of companies in the pursuit of shareholder wealth maximization. The course gives a broad overview of important issues in corporate finance and combines insights from economics, business and psychology. The economic side of corporate finance deals with the maximization of shareholder wealth. To do so managers aim at securing the greatest possible return in exchange for accepting the smallest amount of risk. For instance, a company can finance itself by borrowing money from banks, by issuing bonds or through the stock market. These types of decisions influence the expected return and risk of the company. Traditional economics assumes that managers and investors are rational self-interested people. However, there is a large body of evidence from social psychology and behavioral economics that people often act irrationally and behave pro-socially by taking the social impact of decisions into account. The course also shows how decision making biases influence managers and investors in their financial decisions and how social preferences impact factors such as corporate social responsibility. The course is largely based on real life cases that we discuss in an interactive manner. Students will debate on topics such as "should CEO bonuses be reduced?" and "is it important for firms to put corporate social responsibility high on their agenda?"

Course objectives

- You get a broad overview of the field of finance.
- You will be able to better understand financial articles in newspapers like the Financial Times, the Wall Street Journal and the Economist.
- You will be able to apply your knowledge to understand basic financial information of the firm or institutions you will work for.
- You deepen your knowledge on a specific financial topic of your choice on which you will work for your project.

Prerequisites

Students should have taken one or more of the following three courses: SSC1027 Principles of economics, SSC2022 Accounting and accountability or SSC2036 Introduction to Business Administration.

Statistics I

Full course description

The course Statistics I provides a general introduction to quantitative research methods commonly used in social and life sciences. Emphasis is on methods of data collection and types of data, descriptive statistics, regression modeling, discrete and continuous random variables, and inferential statistics: the construction of confidence intervals, hypothesis testing, null and alternative hypotheses, p-values. The structure of the course is based on a new paradigm in teaching statistics: that of a simulation and randomization based approach (please see http://www.youtube.com/watch?feature=player_embedded&v=5Dnw46eC-0o for an intuitive motivation). This instructional principle departs from the classical statistics curriculum of first covering descriptive statistics, next discuss probability theory and models of random variables, continue with sampling theory, to deal with inferential statistics only in the very end of the course. Randomization-based courses make a drastical change, and start with inferential statistics from the very beginning. A crucial element in the new approach are the applets you will find in the internet, and that allow you to simulate many samples from a hypothesized population, or from a known population, in order to visually clarify statistical concepts. Active learning is based on solving 5 or 6 statistical explorations from the text: four collaboratively, in the two tutorial sessions, and 1 or 2 individually, at the end of the week. Next, an important role in this course is for the student project. This project starts in the first weeks, with students working with surveys, and in doing so, collecting data on student characteristics, such as mathematical and statistical prior knowledge, metacognitive abilities and general study styles and habits. In the Student project, you will perform a statistical analysis of your own data, and after collecting the data of all students, you will develop a statistical model that explains students' achievements in terms of background variables and input factors.

Course objectives

- To perform your own (first) research using quantitative techniques.
- To develop the abilities to read, understand and criticize scientific articles in the domain you study or work, that use quantitative techniques.
- To gain experience in actively performing such a quantitative analysis yourself, making use of applets provided through the internet.

Prerequisites

SCI1010 Basic Mathematical Tools .Students with substantial high school experience in Mathematics (For an indication of the relevant topics, see SCI-M, p. vi-viii) can contact the coordinator to request a waiver.

Sustainability Assessment: Tools and Methods

Full course description

The emphasis of this course will be on the getting to know some tools and methods used in sustainability assessment. The theoretical knowledge and insights from SCI1016 Sustainable Development: An introduction and SCI2012 Globalization, Environmental Change and Society will be further deepened, and we will analyze several existing case studies to see how the methods and tools were applied. Issues of scale (case studies at global, regional and local level) and of stakeholders (who to involve) and of future-proofing (scenario studies) will be addressed. Key methodological issues and tools will be addressed, such as participatory methods for involving stakeholders, qualitative modeling techniques and scenario analysis, both in normal tutorials and in work sessions which are interspersed with exercises. Ample attention will be paid to the challenges that can emerge when applying these tools and methods in practice. At the end of the course, students will use the acquired knowledge to design a workplan for an integrated assessment of a case study of their choice (e.g. air quality issues in Maastricht, the sustainability of Maastricht University or sustainable tourism in Limburg).

Course objectives

The objective of the course is to learn about methods and tools for addressing complex sustainability issues in an integrated way. During the course, students will:

- Appreciate the general principles underlying sustainability assessment.
- Obtain experience with applying methods for sustainability assessment through exercises.
- Study practical applications of different Integrated Assessment methods in real-life case studies.

Statistics II

Full course description

In Statistics II, we resume the thread of Statistics I: a discussion of the basic tools of inferential statistics: confidence intervals and hypothesis tests (which in turn involved concepts like null and alternative hypotheses, Type I and Type II errors, rejection points and p-values), all these concepts illustrated in the context of the one-sample tests. In this course you will encounter a whole battery of additional tests, enabling you to examine a large array of questions that may come up in social sciences and life sciences, and that focus on cases you will encounter most frequently: multivariate cases, rather than univariate cases.

In the first weeks, we discuss amongst others the two-sample t-test (allowing you to compare the mean of a quantitative variable between two populations), ANOVA (same, for more than two populations), the paired-sample t-test and the chi-square test (allowing you to establish relationships between qualitative variables, using contingency tables). But the main dish of the course is obviously regression analysis, a very flexible technique which allows you to relate a dependent variable to a number of independent or explanatory variables.

There will be a strong focus on actively doing statistics. Using the great 'How is Life?' data set of OECD, that compares quality of life in many countries, you will do weekly empirical investigations, using SPSS as your modeling tool. And at the finish of the course, you will do another, more major and less structured empirical analysis in SPSS: your student project. The project measures your active mastery of statistical data analysis. In the final exam your passive mastery will be assessed.

The exam will consist of pieces of statistical analyses, with the student having to interpret and criticize the outcomes of these analyses. Weekly assignments, as well as the project and exam focus on your ability to apply statistics in relevant areas, beyond 'knowing statistics'.

Course objectives

- To familiarize students with quantitative research methods, building on SSC2061 Statistics I.
- To develop the abilities to read, understand and criticize articles in the domain of your concentration, as a passive use of your knowledge of quantitative techniques.
- To gain experience in actively performing a quantitative analysis yourself, making use of the (more advanced features of the) tool SPSS.

Prerequisites

SSC2061 Statistics I.

Human Reasoning and Complex Cognition

Full course description

The present course is concerned with theoretical (psychological) and empirical perspectives on human reasoning and decision making. Reasoning involves making deductive or inductive inferences and judging them according to current goals, beliefs and knowledge. Decision making refers to choosing between alternatives (e.g. different mental models). Both topics are of central importance to humans and even though some seem to reason better than others or their decisions seem more sound, thinking remains an important and for some uniquely human feature. Studying human thought (both reasoning and decision making) belongs to the field of Cognitive Psychology. Like

most topics studied by psychologists, both reasoning and decision making include a wide range of explanatory models that emphasize different aspects of human thought.

Eleven topics of the (cognitive) psychology of reasoning and decision making are discussed using a Problem Based Learning format. The topics are: (hypothetical) reasoning, the mental imagery-debate, the psychology of decision making, Signal Detection Theory and vigilance, emotions and reasoning, emotions and decision making (the Somatic Marker hypothesis), subliminal perception, deductive and inductive reasoning (heuristics and biases) and socio-economical decision making (pro-social behavior: risk and trust).

Course objectives

- To help students acquire knowledge of recent (psychological) theories in the field of reasoning, decision making, problem solving, and (moral) judgement.
- To provide an insight into the role of higher cognitive processes have in directing human behaviour; various forms of human reasoning, decision making, problem solving, creativity, etc.
- To explore a given topic in the psychology of thought by writing a client consultancy report (group work).

Prerequisites

SSC1005 Introduction to Psychology or SCI2036 Artificial Intelligence and at least two 2000-level courses.

Recommended reading

- Chapters of several basic cognitive psychology books are made available as e-reader or hardcopy.
- E-Readers.

Migration Studies: Flows and Concepts

Full course description

This course will examine the following concepts in contemporary migration studies: forced migration, internal displacement and refugees; irregular and transit migration; integration, transnationalism and social cohesion; return migration and reintegration; and migration and development. The course will introduce students to both the complexities and challenges of migration and the potential positive effects of migration. Throughout the course multiple case studies will be examined to highlight different migrant concepts and flows.

Course objectives

- To provide students with a basic overview of migration flows and concepts.
- To give insight into the complexity of human movement.
- To acquaint students with different cases and examples of the various global migration flows.

Theories of Social Order

Full course description

What binds us? What divides us? And how can we organise society so that we can all live together peacefully? These questions seem to have a renewed urgency in many Western countries, where the traditional societal order seems under attack in many different ways. In “Theories of Social Order”, we study the different types of glue that hold societies together. For sociologists, the root of the problem of social order may be found in the sometimes conflicting interests of individuals and those of groups (and societies), which these individuals constitute. Whenever individual interest conflicts with group interest, social order is at risk. A solution to the problem requires the reconciliation of individual and collective interests, but theorists have provided several distinct solutions to this problem. We will consider the six most prominent mechanisms to produce social order: individuals, hierarchies, markets, groups, networks, and institutions. We read classical and foundational texts by important sociologists like Marx, Weber, and Durkheim, as well as contemporary scholarship and empirical applications that, in some form or another, apply the arguments made by these earlier scholars. We use the editorial introductions by Hechter & Horne to provide the background for each of these texts and link them to the central problem: how to achieve social order? Throughout the course, the strengths and weaknesses of the various theories are discussed, and classical texts are linked to contemporary events whenever feasible. In this way, students will improve their understanding of the social world and will learn to apply the analytical tools to real-life phenomena.

Course objectives

- To introduce students to the way classical and modern sociologists theorize about society and in particular, to introduce students to a core theoretical issue in the social sciences: the problem of social order.
- To develop skills in identifying and analyzing theoretical arguments.
- To apply abstract theories to new concrete empirical situations.

Prerequisites

NB: This is a revised and upgraded version of SSC1003 Theories of Social Order. Student who have already taken SSC1003 Theories of Social Order cannot take it again.

Prerequisite

Economics and Society: History of Economic Thought

Full course description

Starting from societal problems we will discuss the development of economic thinking. We start with the basic question in any economy: given a number of consumers and a labor force and an amount of capital, how can we organize the economy such that producers produce what consumers want? Who may produce the good? Who can consume the goods? This is the basic question about what to produce? How? And for whom? Second, what organization maximizes welfare? What determines the prices of the goods and the wages? We discuss developments in thinking about this central problem of scarcity in an economy. Second, we discuss underutilization of resources in an economy of which unemployment is a major example. Since unemployment is related to many social problems such as poverty and crime, unemployment must be prevented. How? How have economists tried to solve this problem? The various views that have been developed to tackle this problem will be discussed in the second part of the course. We will discuss various views and discuss positive and normative aspects of economic thinking. In the discussions we also touch upon the question what economics as a science is and the boundaries of economics.

Course objectives

This course aims to discuss solutions that economists have considered to solve economic problems such as the organization of an economy, unemployment, inflation. We discuss the theoretical context and the development of economic thinking. We will extensively pay attention to different views that exist in economic theory.

Prerequisites

SSC1027 Principles of Economics; recommended: COR1002 Philosophy of Science or COR1004 Political Philosophy

Recommended reading

To be announced. We use a textbook and articles.

Economics and Society: History of Economic Thought

Full course description

The first part of this course is about how people make economic decisions. We will start out with an introduction to the "standard" economic paradigm of expected utility theory and rational choice. We will then continue to look at how the influence of other disciplines, such as psychology and sociology, has changed the understanding of how people make economic decisions. In particular, we will analyze how people deviate systematically from the self-interested, utility maximizing, rational behavior that has been traditionally assumed when modelling economic choice. The second part of this course discusses macroeconomic theories and policies. The main question that macroeconomists try to address is: is macroeconomic demand policy effective? This question has caused and still causes huge debates among macroeconomists, in particular between New-Keynesian, Post-Keynesian and Austrian economists. The link with the first part of the course is that the more behavior deviates from standard rational behavior, the more the government needs to act as a coordinator in an economy. Hence, discussions about modelling economic behavior have been all around in discussions among macroeconomists.

Course objectives

This course aims to discuss solutions that economists have considered to tackle economic problems such as economic decision making and the role of rationality, the organization of an economy and the effectiveness of economic policy. We discuss the theoretical context and the development of economic thinking. We will extensively pay attention to different views that exist in economic theory.

Chinese International Relations and Foreign Policy

Full course description

The economic and political reforms of the 1980s and 1990s transformed China into the world's second-largest economy in less than a generation. Its economic growth has allowed the country to seek a greater role in shaping world politics. In this advanced-level undergraduate course we are trying to make sense of Chinese foreign policy—how China approaches the world and what shapes its external behaviors—in the contemporary era. This course begins with an introduction, laying out the overall course structure, introducing key theoretical perspectives and approaches to Chinese International Relations, historical overview, principles and goals of Chinese Foreign Policy, as well as the main domestic debates on foreign policy. The domestic and international determinants for a changing Chinese Foreign Policy are examined as is China's relationships with its neighbours, the US and other international institutions.

Course objectives

- To teach students the main Chinese Foreign Policy challenges in the 21st century.
- To teach students to analyze theoretical approaches in the examination of Chinese Foreign Policy issues through data interpretation and information gathering.
- Students should have a more nuanced understanding of Chinese foreign policy and be able to use some of the theories in the discipline to explain the logic behind the decision-making of foreign policy in China.
- Students will demonstrate critical thinking skills in evaluating the nature and process of foreign policy making in China.

Prerequisites

At least one of the following: SSC1006 International Relations or SSC1025 Introduction to Political Science and COR1003 Contemporary World History.

Innovation Systems, Policy and Sustainability Transitions

Full course description

The issues, that the political economic systems create while moving forward with a multitude of

attempts in structuring our everyday lives and possible futures, continue to systematically socialize negative economic, environmental and social impacts over us and the world society. Much needed global societal transition towards alternative settings calls for a comprehensive understanding and the analysis of the working of the multi-scalar socio-technical systems. Accelerating the evolutionary scientific, technological and social sustainability transitions towards alternative societal futures requires a holistic, interdisciplinary and critical know-how which will be introduced by a set of lectures and enhanced by participatory discussions. Lectures and discussions are supplemented by optional multi-method research, entrepreneurial mentoring, critical advocacy and evidence-based policy writing skills sessions. After completing this course, participants will acquire working knowledge on ideas, interests, institutions of societal relevance and be able to design new actions or policies for change making in varieties of systems, sciences, innovations, transitions, economies, contexts, and, ultimately on the sustainability outcomes.

Course objectives

To gain holistic, interdisciplinary and critical knowledge in the analyses of:

- Varieties of systems of innovation and sustainability transitions from political economic and societal perspectives, which integrates economic, social, environmental, as well as policy perspectives.
- In particular, varieties of systems (e.g. technological, regional, socio-technical systems), entrepreneurships (e.g. technological, social, environmental), sciences in systems (e.g. natural and social sciences), innovations (e.g. technological, social, environmental eco-innovations), transitions (e.g. technological, regional, societal, sustainability transitions), and alternative economies (e.g. circular economy, social economy, digital economy, bio-economy, sharing economy).
- Varieties of systems and transitions from a global perspective (e.g. contexts and cases of high and middle/low income countries, emerging markets and powers, international cooperation in between).
- Varieties of systems and transitions from a human perspective (e.g. varieties of entrepreneurships and of outcomes, e.g. agency, quality of life, well-being, happiness, peace).
- To acquire an evidence-based approach for different policy analysis and design styles, and formulation techniques on how to write a policy brief in practice.

Prerequisites

SSC1017 Principles of Economics OR SCI1016 Sustainable Development: An Introduction.

Environmental Sociology

Full course description

In this course we will explore the interactions between social systems and the environment. By looking at these interactions as two-way relationships, we will learn how human societies shape the environment and how environments shape societies. We will focus on the history of resource use and environmental degradation, the construction of environmental issues as social problems, environmentalist movements, and challenges in addressing and governing social problems such as climate change. In examining these topics, we will make use of multiple sociological theories and concepts including political economy, environmental modernization, social movements, risk society, and consumerism. We will interrogate key questions such as: how do we define 'the environment' and 'nature,' how do these definitions shape our interactions with them? Who controls access to environmental resources, and why does this matter? How do our daily actions contribute to socio-environmental relations? Who is impacted by environmental hazards, and how are these governed? What do environmentalist movement groups mobilize for and why? How do scientific and political institutions interact in addressing problems like climate change?

Course objectives

- To become familiar with key concepts and theories in environmental sociology literature
- To evaluate environmental sociology scholarship in a critical and constructive manner
- To learn to apply sociological insights in the analysis of contemporary environmental issues
- To recognize and dissect how societies give meaning to the environment
- To understand the contingencies in how we relate to and interact with the environment

Prerequisites

SSC1029 Sociological Perspectives or SSC2028 Classical Sociology or SSC3038 Contemporary Sociological Theory Recommended: SKI1004 Research Methods I, SKI1005 Research Methods II, PRO1012 Research Project

China and India in Global Governance

Full course description

This course examines the emerging roles of non-Western actors in institutions of global governance. While traditional scholars of international relations focused on relations between sovereign states, this course addresses the questions of governance in a globalizing world through an examination of

the interactions between international organizations (IOs) and sovereign states in shaping the contemporary global order. Given that major IOs have been led by Western powers, exploring the emerging roles of China and India in the Western-centric governance architecture are of particular interest to us. These two countries have experienced unprecedented economic growth in the past decades as they have integrated more with the market economy since the 1980s. Their emerging roles as global players were acknowledged in the U.S National Intelligence Council's report in 2005, stating, "In the same way that commentators refer to the 1900s as the "American Century," the 21st century may be seen as a time when Asia, led by China and India, comes into its own." We will start off by introducing the theoretical and historical perspectives on global governance. Week 2 will discuss the changes of Chinese and Indian foreign policy strategies and the rationales for their engagement in IOs. Focusing on the selected section of regimes, including climate change and infectious disease, security and terrorism, trade and finance, and also development and foreign aid, Week 3 and 4 will examine the ways in which China and India engage to the existing global governance architecture, the tools they use and the efforts they make to influence or redesign current Western-centric international institutions. Week 5 will take a closer look at the involvement of China and India in regional institutions with overlapping membership, including Shanghai Cooperation Organization (SCO), Conference on Interaction and Confidence-Building Measures in Asia (CICA), Bangladesh-China-India-Myanmar Forum for Regional Cooperation (BCIM), and Asian Infrastructure Investment Bank (AIIB) in Asia. While China and India have worked together to contribute to the regional governance, major security challenges presented by the rising powers to their neighboring countries, such as territorial disputes and river basin management, will also be highlighted. Week 6 will wrap up the course by considering the future global governance: How would the Western-led international institutions incorporate the rising powers? Can China and India collaborate on rising global governance challenges? Are they strategic partners or strategic rivals?

Course objectives

- To understand the evolution of global governance and the current challenges to world order
- To analyze the impacts of emerging powers, China and India, on Western-led international organizations (IOs)
- To understand the different political systems and foreign policy strategies of China and India in comparative perspective
- To apply relevant theoretical and conceptual knowledge to examine real-life cases and issues in the global and regional levels

Introduction to Art: Representations, Performances and Interactions

Full course description

The traditional term for the many ways in which artworks represent reality is mimesis. The mimetic talent for imitation and representation has been the subject of admiration, study and debate throughout the history of Western art. The notion of mimesis is employed to describe painting, literature, music, theater, dance, and more; it is still used to characterize the domain of the arts in general.

In engaging with the concept of mimesis, this course focuses on three central themes and approaches. The first part of the course is concerned with representations of reality in nineteenth and early twentieth century literature, painting, and music. The second part deals with modern and contemporary performance art. The academic field of Performance Studies is introduced in an attempt at dealing with the blurring of genres, cultures and conventions that are typical for contemporary art shaped by mass media and processes of globalization. The third and last part of the course discusses sociological perspectives on art as a social practice and a collective activity.

This course, through its emphasis on representations, performances and interactions, constitutes a basis for courses on the arts in all their diversity, as well as courses on culture and cultural studies in general. The course includes a practical, creative exercise in stylistic representation and an excursion to a cultural institution in Maastricht, such as the Jan van Eyck Academy.

Course objectives

- To provide students with an advanced introduction to the visual and performing arts.
- To broaden the students' theoretical understanding of art.

Prerequisites

None.

The Making of Crucial Differences: 'Race', Sexuality, Gender and Class in Historical Perspective

Full course description

Starting from recent debates and problems like new nationalism, misogyny, political homophobia, Islamophobia and Xenophobia... this course offers a historical inquiry into the construction and development of cultural 'differences' marked through categories like gender, sexuality, class, 'race', and religion from the eighteenth century until the Holocaust. Through historical case studies, philosophy and literature it looks at the way in which Western identity-discourses and its colonial subcode have formed dichotomies like self and other, black and white, the Orient and the West, male and female, worker and bourgeois, hetero- and homosexual, and how these differences became social inequalities. From a critical theoretical perspective it will reconstruct the paradoxes of a 'dialectic of Enlightenment', that means the dark side behind its claim for reason, equality, brotherhood and freedom.

It aims, firstly, to trace and illustrate the ways in which the Enlightenment has provided a rationale to mark gendered, classed and racialized boundaries in science which, more often than not, resulted in inequalities. These inequalities became embedded in European society in such a way that the active, dominant subject came to be seen as 'white, male, and middle class.' Moreover, this dominance grew beyond 'Europe' and helped to carry out the imperial project. The centrality of empire discursively and materially forged a 'European-ness' that was distinctively gendered, classed and racialized. With the help of a literary analysis (Joseph Conrad "Heart of Darkness"), the course demonstrates how classical European nationalism and colonialism (slavery) were gendered and racialized.

Secondly, the course will introduce into critical theories, like discourse analysis and the history of knowledge (Michel Foucault), postcolonial and gender/sexuality studies and studies on Orientalism (Scott, Said). Thus, it will examine the dynamic processes of the "history of sexualities", their formation and contradictions, which emerged out of these processes. We will heed our attention to some of the salient ways in which women and men of the different classes and 'races' became embedded in social relationships, thereby often transgressing taken-for-granted lines of differences. Last but not least, we will ask how colonial and anti-Semitic discourse, stereotypes of the 'external Other' and stereotypes of an 'internal European Other' (the Jews etc.) were intertwined and how we can better understand the Holocaust from a historical perspective.

Course objectives

- To acquaint students with a critical perspective on modern, mostly European history and the 'dialectic of Enlightenment', that means to show how the achievements of Enlightened ideals etc. were intertwined with colonialism, the 'Jewish question', gender and class inequalities...
- To acquaint students with cultural construction and historical configurations of 'race', class, gender and sexuality from the Enlightenment until the Shoa/Holocaust.
- To acquaint students with the way these categories of difference were conceptualized and interconnected, and how they were sometimes newly invented in science, philosophy and social theory.
- To acquaint students with the way in which these configurations like gender, race and religion have structured cultural scripts and practices, stereotypes, individual identities, and European and North American developments, like slavery.
- To acquaint students with the way in which such intersecting categories of difference have constituted (and still constitute) inequalities and differences of power, resulting in invisibility, restricted access to sources etc.

Prerequisites

Interest in historical research and critical theoretical reflection.

Recommended reading

- E-reader and the novel "Heart of Darkness" (Joseph Conrad).

Enlightenment and Romanticism

Full course description

The debate between Enlightenment and Romanticism has an enduring impact on discussions of

Bachelor University College Maastricht

today in art, politics, science, human identity and social values. This course is a systematical introduction to these two, formative, opposed intellectual traditions.

First, a historical context will be presented to the political and ideological ambitions of the Enlightenment (enlightened despotism, Voltaire at the court of Frederick the Great, censorship and the diffusion of the Enlightenment).

Secondly the opposed approach to 'Nature' will be introduced; the influence of Newton, the rise of modern science, the Encyclopédie vs. Romantic science (e.g. Goethe's criticism on Newton's Theory of Colour) and the role of the arts in the new approach to Nature (such as landscape painting and romantic poetry).

Then, the changes in the visual arts will illustrate continuity and discontinuity in cultural history (Romanticism and Neo-Classicism).

In the fourth place human subjectivity in the Enlightenment (based on Lockean psychology and Self-love) will be confronted to new approaches to the romantic soul (the unconsciousness, irrationality, Weltschmerz).

Finally, discussions about morals and politics will be presented (Rousseau, the Social Contract, the slogans of the French Revolution vs. Romantic values concerning the State and personal relationships like love and friendship, nationalism).

Course objectives

- To provide students with a historical and philosophical introduction to Enlightenment and Romanticism.
- To understand these periods as opposed worldviews in social, philosophical, scientific and political perspective.
- To understand how much our life and culture is structured by enlightened and romantic views.

Prerequisites

None, however, this course is not suitable for students in their 1st year.

Narrative Media

Full course description

The first part of the course introduces main concepts from narratology, such as story, discourse, authorship, and narration. In addition, students will learn the differences between a structuralist and a postclassical approach to narratology.

During the second part of the course, narrativity in different media will be subject of investigation. We ask how different media construct stories and to what extent these stories are medium-specific. The media under study are the short story, the fixed image and series of images, comics, film, hyperfiction and digital games. For students with particular interest in literature, the *Handbook of Narrative Analysis* (2005) will be most instructive, while *Narrative across Media* will be most useful to students who are more oriented towards other media. We will read chapters from both books in this course as well as other literature that addresses the narrativity of media.

The final essay has to show that students are able to apply the methods introduced during the course to a case study they are free to choose. Examples are the novel *House of Leaves*, the short story collection *Olive Kitteridge*, the comic *Deadpool* and its film adaptation, the graphic novel *Persepolis*, the film *5x2*, and the game *L.A. Noire*. As this is a course in the humanities, an approach to storytelling from the social sciences or psychology is only possible in comparison to methods from the humanities.

Course objectives

- To familiarize students with the methods of narratology (the study of storytelling) and important theories revolving around narratology.
- To analyze different media such as literature, paintings, photographs, comics, film, film music, digital literature and computer games.

Prerequisites

At least two 2000-level courses in the Humanities or Social Sciences.

Recommended reading

The following handbooks are the most crucial:

- Herman, L. and Vervaeck, B. (2005). *Handbook of Narrative Analysis*. Lincoln: University of Nebraska Press.
- Ryan, M.-L. (2004). *Narrative across Media*. Lincoln, London: University of Nebraska Press.

We will also make use of excerpts from other sources, such as:

- Hutcheon, L. with S. O’Flynn (2013). *A Theory of Adaptation* (second edition). New York: Routledge.
- McCloud, S. (1993). *Understanding Comics: The Invisible Art*. New York: HarperCollins.

Introduction to Philosophy

Full course description

One of the greatest and most influential Ancient philosophers, Aristotle of Stageira (384-322 BC) once remarked, “Wonder is the beginning of philosophy”. What he was referring to is our habit of asking fundamental questions about our every-day life, such as, “Suppose I am certain that I am right about something, what is that certainty based upon?”; “Suppose I am engaged in a discussion with someone (for example about some controversial matter), what can objectively guarantee the stringency of my argument?” Thinking about and discussing such questions will force us to reconsider the things we have always taken for granted. And ultimately they will lead us to more fundamental questions about the proper nature of Truth and Knowledge as such.

Assignments during the course include the following: the nature of philosophical enquiry, problems of knowledge and truth (including the understanding and evaluation of arguments), ethics.

Course objectives

- To teach students how to “think philosophically”.

The Presence of Art: Reinterpreting Modern and Contemporary Art

Full course description

Since the late 19th century and certainly up until the mid-20th century artists have issued avant-garde manifestoes of change, claiming their art to be ahead of the times. Critical of conventions and traditions, they regarded art as a revolutionary means to social, political, cultural, and intellectual emancipation and progress. Through what has been called the “shock of the new,” by making tabula rasa with the existing, art was to create a better world. Were it not for the fact that art effectively served the ideologies of both the socialist and fascist totalitarianisms of the last century, such radical ambitions might even sound a bit naïve, nowadays. Indeed, as yesterday’s future has become today’s past, the utopias of a bygone era seem to have been disappointed, at last - or have they not? Do we need to rescue avant-garde virtues and ideals for the sake of the relevance of contemporary art? What precisely is the legacy of the modern avant-garde besides its success on the global art

market? In the early 21st century and under the spell of a “new spirit of capitalism”, is there any hope left for effective artistic critique? Or do current “economies of enrichment” simply reduce the value of art to financial speculation?

This course considers histories and theories of modern and contemporary art. It provides an overview of the heterogeneous and experimental development of modern and contemporary art. Artistic responses to society, politics, science, and technology are discussed. The module emphasizes the practices governing institutions of the contemporary art world, such as art markets and museums. Furthermore, the course features excursions to local art institutions, including the Bonnefanten museum in Maastricht.

Course objectives

- To study historical and theoretical approaches to modern and contemporary art.
- To enable critical reflection and debate on the meaning and relevance of artistic practices.
- To learn how to write an art review.

Prerequisites

None

Philosophers of the 20th Century

Full course description

The course reconstructs the main ideas of some of the most influential philosophers of the 20th century: Ludwig Wittgenstein (1889-1951), Martin Heidegger (1889-1976), Hannah Arendt (1906-1975), Michel Foucault (1926-1984), Jacques Derrida (1930-2004) and Jürgen Habermas (1929). Their ideas are partially the result of the practical turn within philosophy initiated in the 19th century by Karl Marx (1818-1883), Søren Kierkegaard (1813-1855), Friedrich Nietzsche (1844-1900) and Charles Sanders Peirce (1839-1914). So, elaborating on their work during the past century many philosophers took practical issues as the starting point of their philosophy. This course tries to figure out what these practical issues are and how they are related to their theoretical ideas. Moreover, the course addresses the link between the work of these philosophers and the societal context and discusses its heuristic value.

Course objectives

- To introduce students to influential philosophers of twentieth century philosophy.

Cultural Diversity in a Globalizing World

Full course description

What is cultural diversity; when and where does cultural diversity become salient? This course focuses on cultural difference and identity in an era in which the nation seems to lose its unifying significance in matters of personal identity and group identity formation. It seeks to analyze how globalization influences identity and culture and the ways in which these interact with social differences, gender, ethnicity, religion and nationality. Its orientation is both practical and theoretical. Students will get acquainted with different theories of globalization and culture such as Hybridization (Nederveen Pieterse), McDonaldization (Ritzer), or the Clash of Civilizations (Huntington), concepts such as Orientalism (Said), Occidentalism (Margalit and Buruma), and Multiculturalism. Throughout the course theoretical discussions are linked to real life, actual and sometimes pressing practical debates and examples such as multicultural dilemmas, national identity formation, fundamentalist terrorism, and migration.

Themes: Cultural Diversity; Gender and Ethnicity; National Identity; Multiculturalism; Orientalism; Occidentalism; Fundamentalism.

Disciplinary perspectives: Cultural Studies, Migration Studies, Gender and Diversity Studies, Sociology

Course objectives

- To teach students to reflect upon issues of globalization and cultural diversity from several disciplinary perspectives and connect these issues with their major field of academic study.

Prerequisites

At least one Humanities course.

Digital Media

Full course description

Students in this course will be introduced into the broad field of digital media and discuss in detail computer based practices (both from literature from the humanities and qualitative social sciences). The topics discussed range from transformations in our digital cultures based on technological developments to artistic practices in digital literature and art. While popular debates usually focus on general discussions on the impact of digital media, this course will deal with the complexity, history and diversity of our contemporary culture.

Over the course of the past decades digital devices have become omnipresent in Western society. Every day we type on computers, make calls with our mobile phones, log in to numerous websites and social networks. Perhaps more importantly, we are able to keep extensive, precise records of our everyday lives. From internet cookies to video camera surveillance feeds, along with the information users, companies and governments store in clouds, more and more data is generated and archived. In the digital age, information circulates faster and faster, sometimes without the knowledge of the parties from which the data originate. The consequences have been differently valuated. The optimistic account stresses the new media's inherent possibilities for active cultural and social participation beyond the reach of existing political or commercial institutions. Liberation is a term discussed when we follow discussions about the use of social media to support processes of democratisation.

When we investigate the use and abuse of user data and surveillance strategies both from governments and marketing institutions exploitation of users is central in the debate. We willingly help to spread information on social media, often without an awareness of the information politics involved. The cultural transformations of and through new media technologies, the impact they have on their users and the politics of information that form the basis of both exploitation and liberation will be investigated in this course.

The course will be structured as follows:

1. Transformations: new vs. old media, users and non-users.
2. Networking: sharing practices, privacy and surveillance, activism, hacking.
3. Remixing: gaming, gamification, digital literature and art.

Course objectives

The aims of this course are to familiarize students with topics relevant for digital culture and society such as:

- Different uses of digital media in the fields of netactivism, gaming, digital literature and digital art.
- The relation between technological development and user practices as e.g. hacking, sharing practices, quantified self.
- Introduction to information politics.

Prerequisites

None.

Crucial Differences in the 21st Century

Full course description

This course considers a variety of contemporary configurations of gender, sexuality, race/ethnicity, class, age, religion, and other categories of difference. You will learn to examine the way in which these 'crucial differences' are constituted in the late twentieth and early twenty-first century, as well as to analyze the ways in which they function on social, cultural, political, and symbolic levels. The emergence of the various social movements during the 1960s and 1970s, such as the women's movement, the civil rights movement, and gay and lesbian liberation, and their lasting impact on society today, serves as a starting point of the course. We will examine how these diverse

movements have shaped and reshaped the form and content of the identity of various minority groups on individual and collective levels. Special attention will be directed to the notion of intersectionality, which refers to the interaction between multiple categories of difference in cultural, social and individual practices, and the effects of these interactions in terms of power and inequality.

Subsequently, we will take a closer look at the complexity of such multiple differences and inequalities by tracing the entangled workings of gender, sexuality, race/ethnicity, class, age, and religion through a variety of topical cases. We will look at the way in which such categories realign in various contexts of crisis and conflict, ranging from the late twentieth century wars in Rwanda and the former Yugoslavia to the complex force-fields of (neo-)nationalism, populism, and xenophobia today. We will examine the rapidly shifting status of the human body in technologically advanced societies, zooming in, for example, on the role of cosmetic surgery as a 'technology' of gender, race, and class. We will theorize and analyze the complex relations between norms of gender and sexuality in the structuring of contemporary performances of identity in a variety of social, cultural, and institutional environments. We will critically examine contemporary constructions of whiteness and the role of race in the construction of national identity. We will direct special attention to the emergence of sexual nationalisms across and beyond Europe today, focussing on the prominent place that women's sexual liberation and gay rights occupy in contemporary debates about Islam and multicultural citizenship.

As these cases indicate, the course draws on a variety of geographical and cultural locations and contexts. Diversity is also exemplified in the interdisciplinarity that characterizes gender and diversity studies as a scholarly field. The texts used in this course draw on theories and methods from disciplines such as philosophy, sociology, anthropology, and cultural studies, as well as from the fields of feminist theory, postcolonial theory, and queer studies. Through critical inquiry into concrete cases as well as major texts - including modern classics in the field such as Judith Butler's *Gender Trouble* and Joan Scott's *The Politics of the Veil* - this course dynamically re-conceptualizes the intersections between the various 'crucial differences' by examining the multiple ways in which processes of identity and difference, inclusion and exclusion, equality and inequality are produced and reproduced in ongoing flows of negotiation and transformation.

Course objectives

Upon completion of this course students are able:

- To examine how contemporary configurations of gender, sexuality, race/ethnicity, and other 'crucial differences' structure contemporary cultural discourses and practices, as well as social and individual identities and institutions.
- To identify and take part in topical academic and societal debates within contemporary gender and diversity studies.
- To explain how multiple identities and experiences of difference and inequality interact by adopting intersectionality as a critical theory and method.
- To apply the analytical and critical skills needed to examine the dynamics through which identity and difference, inclusion and exclusion, equality and inequality are continuously produced and reproduced.
- To construct an effective research design for an undergraduate research paper within the field of gender and diversity studies.

Prerequisites

HUM2003 The Making of Crucial Differences (strongly recommended!) or another relevant 2000-level course in the Humanities or Social Sciences.

Distributive Justice in Contemporary Political Philosophy

Full course description

Distributive Justice concerns the morally correct way of distributing the burdens and benefits of social cooperation among citizens. In the wake of the publication of John Rawls's monumental *A Theory of Justice*, there has been an explosion of political philosophizing about this issue, one that continues to

this day. This course will examine the work of some of today's most prominent political philosophers working in the field of justice. In doing so we will study several topics that are related to some of the issues discussed in COR1004 (Political Philosophy). As such the course is designed to be a sequel to

that course, and familiarity with the concepts and authors discussed in that course is presumed.

Having said that, this course is distinctive in several respects. First of all, the course will strictly focus on debates within academia, rather than hot political debates within the wider community. Secondly, the course will exclusively use original primary texts, i.e. original scientific articles and book chapters. Thirdly, the course will be particularly concerned with the construction and evaluation of the minutia of argument. We will be looking at the strengths and weakness of the arguments presented for certain ethical claims and positions, with the aim of figuring out whether we agree with them, and to determine what our own conception of justice is.

Course objectives

- To examine some recent developments in political philosophy in the field of distributive justice.
- To engage with the work of today's leading political philosophers in this field and critically evaluate their arguments.
- To discover one's preferred conception of justice.

Prerequisites

Cultural Studies I: Doing Cultural Studies

Full course description

Cultural Studies is a wide-ranging interdisciplinary inquiry into the ways in which contemporary culture, especially popular culture, operates and functions. It explores how cultural processes and artefacts are produced, distributed, and consumed, and traces the diverse ways in which people shape and transform culture particularly in relation to issues of identity, difference, and power. In contrast to more traditional approaches to culture, Cultural Studies focuses not merely on 'elevated'

cultural objects such as 'great' works of art and literature, but also - and primarily - deals with more mundane cultural phenomena. Addressing topics that range from fashion advertisements to Facebook, and from the iPhone to Lady Gaga, Cultural Studies zooms in on seemingly familiar, yet highly complex, practices of everyday life.

This course introduces you to the key thinkers, topics, and critical frameworks in Cultural Studies. It starts with some of the foundational texts and formative debates within the field, most notably the work of Theodor Adorno and Max Horkheimer, Walter Benjamin, and Stuart Hall, associated with the Frankfurt School and Birmingham School respectively. Subsequently, we will take a closer look at several topical debates and conceptual approaches within contemporary Cultural Studies. We will address themes such as consumer culture, advertising, and social networks; the power and politics of representation; material culture and identity; cultural performances of gender; and the transnational cultural flows of globalization. By reading the work of major theorists such as Zygmunt Bauman, Henry Giroux, and Joanna Zylińska, you will familiarize yourself with a variety of critical approaches to cultural theory. Lastly, by looking at the interrelated topics of posthumanism, art, and technoscience, the final tasks of the course will explore some of the most stirring debates within Cultural Studies today, setting out new directions for the future development of the field.

Course objectives

- To introduce students to the foundational texts and formative debates that have shaped Cultural Studies as an academic field of inquiry.
- To familiarize students with key concepts, themes, and topical debates within contemporary Cultural Studies.
- To introduce students to some of the central theoretical approaches within Cultural Studies, including critical theory, semiotics, material culture studies, gender theory, and critical posthumanism.
- To provide students with the analytical skills to develop their own examination of cultural objects and processes.

Prerequisites

None.

Introduction to Ancient Philosophy

Full course description

Why would anyone choose to study philosophers who lived and wrote (more than) two millennia ago? One obvious answer is: to learn about one's roots; to better understand Western culture and heritage. Up to this day, the ancient Greeks and Romans constitute a major influence on our ideas about critical thinking, about the fundamental character of Reality, about Science, Ethics, and Art, and last not least: about what it is to be human and about what it means for humans to flourish, to live truly good lives. Ancient philosophy provides an inexhaustible source of inspiration for contemporary philosophy. "The European philosophical tradition", the philosopher Whitehead once remarked, "consists in a series of footnotes to Plato". Slightly overstated, but not untrue.

In this course we will return to the sources and study the texts that helped us become who we are today. We will study a range of canonical philosophical texts from Antiquity, ranging from the Ionian Philosophers of Nature to Aristotle. Although we will attempt to position these treatises in their historical and geographic contexts, our main concern will be: what have these ancient thinkers still to say to us today?

One warning: even if you have some prior knowledge of ancient Greek philosophy, that doesn't make this an easy course. Only choose this course if you are genuinely interested in reading ancient philosophical texts that do not always yield their secrets easily.

Course objectives

- To provide students with a basic introduction to ancient Greek philosophy;
- To teach students how to explore the meaning of philosophical texts by situating them in their historical contexts;
- To explore how our culture, and we as part of it, has been shaped by these ancient thinkers.

Medieval Civilization

Full course description

For many of us, even medievalists, the Middle Ages are still somewhat of a mystery. On the one hand we tend to identify the Middle Ages with a dark period in history, which does not have a lot to offer us culturally or intellectually. Yet we are also fascinated by this period, and quite enjoy many of the artefacts that have been handed down to us.

In this course we will try to unravel some of the mysteries of the Middle Ages. We will try to understand how and why this period has become such a source of bewilderment: we shall pay attention to 'typically medieval' phenomena, but also look at the reception of the Middle Ages in retrospect. We will critically evaluate the presuppositions about the Middle Ages and show the continuity of intellectual developments in Antiquity, the Middle Ages and the present.

Course objectives

The course aims to provide insight into European intellectual history in the Middle Ages, against the background of a changing world after the Fall of the Roman Empire. The focus will be on the Latin West. The course aims to provide a critical approach to a selection of medieval topics, including

Bachelor University College Maastricht

- The development of education in the Middle Ages.
- The position and influence of Christianity in the Middle Ages.
- Philosophy in the Middle Ages.
- Literary works of the Middle Ages.
- Science in the Middle Ages.
- Magic and witchcraft in the Middle Ages.

Philosophy of Language

Full course description

The philosophy of language is concerned with the role that language plays in thinking, or more specifically: knowing. As such it is closely related to epistemology and philosophic theories on truth. But ultimately, the role of language also turns out to be essential when we make the transition from judgements about the world to moral judgements, i.e. judgements that express how we should act within that world. In this course we will show you how the study of language has been at the focus of interest of philosophers throughout the history of philosophy, and that the way in which the function of language is interpreted, is intimately connected with a philosopher's world view in general. We shall specifically pay attention to the philosophers Frege, Russell and Wittgenstein, but shall also

touch upon the works of a variety of other philosophers, such as William of Ockham, David Hume and Immanuel Kant. We shall explore the fundamental properties of language that allow it to be a medium of thought and knowledge. Among these properties are truth, meaning and reference, notions that are closely linked together in what is often called the 'triangle of language'. Developing the skills of thinking philosophically about language will have an impact beyond the immediately related philosophical topics. You will become a more powerful thinker, better prepared to make important decisions and less susceptible to being tricked and manipulated by others.

Course objectives

- To introduce students to the history of philosophical thought concerning language, including the implications of several important theories about language for how we think about knowledge and the possibility of making judgements.

Totalitarian Temptation

Full course description

This course is a history course that will study 20th century totalitarianism over a broad front. Attention is paid to both theories on totalitarianism as on totalitarian movements and regimes during the previous century. All the different variants of totalitarianism will be studied: national socialism in Germany, fascism in Italy, as well as communism in the Soviet Union and Eastern Europe. Postwar phenomena such as right-wing extremism, populism, and Apartheid in South Africa will be given attention as well. In each case we will see whether and in how far the different forms of totalitarianism can be understood from the perspective of the different theories about it. Special attention is given to the 'politics of memory' - collective remembrance and historical writing - and problems related to political transformation processes in various countries (Germany, Eastern Europe, South Africa).

Course objectives

- To introduce students to the general theories on totalitarianism and familiarize students with various 20th century totalitarian regimes and movements.

Literature and Psychology

Full course description

In the first part of the course students will become familiar with the basic elements of psychoanalysis (Freud) and analytical psychology (Jung). Special attention will be paid to depth psychological theories on art and literature.

In the second part we shall read a number of widely diverging depth psychological interpretations of literary texts, such as Sophocles's *Oedipus rex*, Saint-Exupéry's *Le petit prince*, Goncharov's *Oblomov*, Emily Brontë's *Wuthering Heights*, Robert Louis Stevenson's *Strange Case of Dr Jekyll and Mr Hyde*, several fairy tales, myths, poems, and short stories.

The last part of the course is devoted to some epistemological aspects of depth psychological literary criticism. We will go into three main questions: What types of rules are to be observed when interpreting literary texts? To what extent does depth psychological literary criticism qualify as an academic discipline? And, finally, to what extent do depth psychological theories like psychoanalysis and analytical psychology qualify as academic disciplines?

Course objectives

- To introduce depth psychological literary criticism.
- To help students develop their sensitivity for depth psychological dimensions that works of art and literature may have.
- To provide the means to distinguish adequate literary interpretations from less adequate ones: on what reasonable grounds, if at all, can we decide that one (depth psychological) interpretation of a work of literature does more justice to the text than a competing one?

Prerequisites

SKI2084 Writing in an Academic Context: Improving Argumentation and Style.

World History

Full course description

Flowing from this objective, the course deals with the over all history of mankind, and a number of the decisive transformations involved in that history.

What sort of creatures are we? How have we evolved from and lived before we became homo sapiens? What sort of animals are our ancestors?

Important topics nearer in time are the agricultural and industrial revolutions. The agricultural or neolithic revolution has changed us and the world permanently. In a relatively brief period we went from hunting and gathering to tilling the soil and domesticating plants and animals. Why and how did we do this? Since the agricultural revolution our numbers have multiplied beyond comprehension. Societies became increasingly complex and stratified.

The industrial revolution lifted everything to a new unprecedented plane. A type of society arose, driven by industrial innovation and run on fossil fuels. We are still living in that kind of society today, so it is interesting to know how it came about.

The course will also deal with topics like the role of war, disease, religion, worldviews and finance in shaping history. Take disease. Their ways of life brought men in contact with all sorts of diseases. Especially after the agricultural revolution we had to adapt to diseases we caught from our domesticated animals. We still have to do this. Look at present day threats like bird flu. Living in some form of armed peace with diseases has always been a major characteristic of societies. How did we do this?

Finally the course also touches upon the 'Rise of the West'. The contentious rise of Western Europe and North America as a dominant factor in worldhistory over the last 5 centuries will be the closing topic of the course.

Course objectives

- To understand some of the major issues and episodes that have shaped the history of mankind.

The focus will be on themes and topics that have had or are still having long term influences on historical development.

Prerequisites

Any course in history or sociology, COR1003 Contemporary World History, or SSC1003/SSC2065 Theories of Social Order.

Shakespeare on Screen

Full course description

The course will start with a general introduction to Shakespeare, his plays, his world, and his reception through the ages, with special attention to Hamlet, King Lear, Macbeth, and Othello. We will study classic interpretations of these plays (contemporary, romantic, the twentieth century - from psychoanalysis to poststructuralism) and confront these interpretations with famous screen adaptations (Laurence Olivier, Roman Polanski, Kenneth Branagh, Orson Welles, Grigori Kozintsev, etc.).

Course objectives

- To learn to read Shakespeare's plays within different interpretative traditions and to reflect on screen adaptations of these plays within the conceptual framework of these traditions.

Prerequisites

At least two 2000-level courses in the Humanities.

Recommended reading

- Jackson, R. (2000). *The Cambridge companion to Shakespeare on film*. Cambridge University Press.
- Rothwell, K.S. (1999). *A history of Shakespeare on screen. A century of film and television*. Cambridge University Press.

Common Foundations of Law in Europe

Full course description

What do Europeans have in common? Part of the answer to this question is: their law. Currently, approximately 50% of all new legislation in the member states of the European Union has a non-national, European origin. This international outlook of law in Europe is not a new phenomenon. Even when concentrating on the so-called 'national laws' of the various European nations, it must be admitted that these laws find a strong foundation in a non-national, truly European tradition. This tradition dates back to the middle ages. Since it is the conviction of the course coordinator that a true understanding of the growing importance of the European institutions and policies can only be achieved by understanding the common legal history of Europe, the present course concentrates on this shared (legal) past. In doing so, it takes as its focal point the *ius commune*, i.e. the common, scholarly European approach to the law that originated in the middle ages and that was strongly based on Roman Law. This medieval tradition forms the common ground on which the present national legal systems in Europe have developed. It has strongly contributed to the creation of the idea of a common European culture.

In a manner that is highly relevant for an audience of non-lawyers and lawyers alike, the course starts with discussing Roman Law. The so-called *Corpus Iuris Civilis* will be used as the point of departure since most of what we know about Roman Law derives from this compilation of legal

materials that was made in the 6th century AD on the orders of the Byzantine emperor Justinian. The texts that this emperor included in his collection were the product of a thousand years of unbroken legal development. During this millennium, roughly from 500 BC to 550 AD, Rome expanded from a small city-state to a world empire. While Roman law was adapted to cope with the changing society, the idea was maintained that it was essentially the same law that had been part of the early Roman way of life.

The course will also concentrate on the different approach to the law that existed and still exists in Anglo-American jurisdictions. It will try to explain the legal differences today between continental Europe and the British Isles. Additionally, some elements of American legal history will be studied. In doing so, the many similarities that lie beneath the seemingly radically different outward appearance of law in Anglo-American jurisdictions will come to light. This exercise will demonstrate that Anglo-American law is not so different from continental European law as some writers would like us to believe.

The course will conclude with a study of a selection of similarities and differences that exist in today's European legal landscape.

Course objectives

- To provide students with a better notion of law as a harmonising phenomenon in European culture.
- To provide students with a basic notion of similarities and differences in the approach to law in the various member states of the European Union (and the USA).
- To give students a better understanding of basic legal notions such as property, contract and delict.
- To provide students with a greater ability to evaluate the significance of the transfer of law making powers from the national to the European institutions.

Prerequisites

None

Recommended reading

Film Art

Full course description

This course offers an in-depth examination of the various formal dimensions of film such as cinematography, editing, mise-en-scene, acting, costume and sound, as well as the stylistic use of these techniques in the filmic form and narration. The course departs from watching and analyzing very recent films and offers glimpses into early cinema, Russian Film Montage, Weimar Cinema, neorealism, film noir, recent European Cinema and various aspects of 'world cinema'. We shall be examining, among other topics, broader questions of cinema's relation to history, culture and society. Bordwell and Thompson's introductory film textbook *Film Art. An Introduction* will be used as a handbook.

Course objectives

- A comprehensive and systematic introduction to film aesthetics, including aspects of film analysis, film history, as well as film theory.
- To develop students' abilities to view films critically and thereby deepen understanding of the cinematic experience.
- To teach students to analyze films.
- To learn to write a critical and informed film analysis essay.

Biopoetics: An Evolutionary Approach to Art, Literature and Music and Religion

Full course description

Students will familiarize themselves with the basic concepts of evolutionary theory and cognitive science in order to be able to evaluate the controversies and debates within the framework of an evolutionary perspective on art, literature and music. Several themes will be discussed, such as: the mating mind; artistic universals; human nature: blank or pre-wired, the rhythm of poetry; the science of art; the origins of music, grooming, gossip, and the novel; art as adaptation vs. art as by-product; etc.

Course objectives

- To be able to evaluate and apply Darwinist approaches to practices in art, literature, music and religion.

Prerequisites

At least two 2000-level courses in the Humanities or at least two 2000-level courses in the Sciences.

The Idea of Europe: The Intellectual History of Europe

Full course description

This course deals with some of the most fundamental questions concerning the development of the European Identity. What have been the decisive common experiences that have fostered a sense of European community and identity, and how have they evolved over time? Tracing those events and

experiences in the past that have helped to shape some sense of European community and identity means establishing the factors that have contributed to the difference between Europe and the non-European world. The concept of identity logically consists of two components: the notion of historical

continuity and a marked sense of difference between the “in-group” and one or more significant others. If we accept that there is some sort of European identity, albeit complex and multifaceted, we should ask which factors have generated it. To put it more specifically: Which factors contributed to

Europe’s Sonderweg in world history? Or, to use the words of one author, the historian E.L. Jones: how did “the European miracle” come about?

From the angle of world history, the European experience constitutes a major deviation from an almost universal pattern of social and political organization. Europe is the first region in the world that has changed into a large-scale industrial and urban society. This so called process of modernization has turned European civilization into something of a historical anomaly - the kind of anomaly, however, that forced itself on other continents, thus becoming a new kind of standard in the end after all. To ask for the factors that have contributed to the modern sense of European community and identity is, at least for a large part, to ask for the factors that have produced this phenomenon of modernization, including the blatant economic disparities between European civilization (including North-America) and the rest of the world.

Course objectives

- To provide students with an overview of the concept of Europe and the development of European identity.
- To highlight the specific characteristics of European political/social/cultural history, notably in comparison with that of other (non-European) societies, that contributed to a sense of European community and the European identity.
- To demonstrate how a sense of community could evolve from the many shared historical cultural factors.
- To provide students with an introduction to a range of theories which are fundamental to a range of courses at UCM.

Living in a technological Culture I: Introduction to Science and Technology Studies

Full course description

While modern culture relies heavily on sophisticated instruments, techniques, and systems, most people think that the actual making of science and technology is the exclusive domain of scientists, inventors, engineers, and technicians: people who are fascinated by “how things work” and “making things work”. Those not directly involved in the design or development of science and technology (“users” or “consumers”) are thought to have little interest in the facts, materials, principles, or procedures found in the world of scientists and technicians. The only thing they seem to care about is the use of the scientific output and technology. However, people who do not spend much thought on the making of science and technology commonly do not merit its use serious reflection either. Once things have been made or discovered, our interaction with them is understood to be a straightforward matter. We pick up our mobile phone, make some funny pictures with it, listen to music, twitter some details about what we do and where we are and chat with our friends. We board an airplane, fly from point A to point B, and then we get off the airplane. Although we are surrounded by the results of scientific endeavor and technologies of various kinds, they have become almost invisible and we take them for granted.

However, we live in a technological culture. Technology and science shape society, from the shaping of mobility patterns and gender and sexual identities, to the standardization of practices in health care. Mobile phones have changed what it means ‘to be alone’; organ transplantation has redefined

our understanding of life; 'scientific planning' has reshaped our policy-making practices. Technologies do not merely assist us in our everyday lives; they are also powerful forces acting to reshape our activities and their meanings. There is, vice versa, a cultural influence on science and technology too. Thus we can only hope to understand science and technology when we acknowledge their socio-cultural base. Historical and comparative studies have shown how different socio-cultural circumstances yield very different forms and contents of science and technology. Science and technology are, finally, also cultures themselves.

In this course we will analyze techno-science as a socio-cultural phenomenon. This course offers an introduction to Science and Technology Studies (STS). It will introduce you to the multiple ways in which science and technology, individuals and institutions mutually shape one another to the benefit and sometimes detriment of society. In this course, we take a "critical" approach to science and engineering. By this, we don't mean being negative about science nor technology. But like a good movie critic, you will think critically but constructive about aspects of science and technology by focusing on different empirical domains such as human enhancement (e.g. Google glasses, Ritalin, Blade runner), disasters [e.g. Fukushima, Hurricane Katerina], the gene revolution (Monsanto) and the politics of artifacts (e.g. park benches, the UCM building and nuclear plants) while using a set of principles and approaches from the field of Science and Technology Studies.

Course objectives

- To provide an introduction into the social studies of science, society and technology.
- To provide a basis for a critical reflection on our high-tech society.

Prerequisites

None

The Future of Literature?

Full course description

This course examines the multifaceted character of literature at the start of the twenty-first century. As many commentators have argued, the basic features of literary culture seem to be changing. In a world of screens and e-readers, does literature still coincide with print or has it become a more expansive notion that overlaps with other media? Should our conception of literature include the 'quality tv' associated with HBO, for instance? At the same time, contemporary society is changing rapidly too. We now live in a world shaped by Big Data, the war on terror and climate change. That is why the course does not just explore changes in the field of literature but also investigates how fiction is responding to new social questions. Literature continues to play a vital role in public debate, after all, serving 'as an "antenna" ... for a range of opinions, attitudes, and intuitions that have not yet fully congealed in public discourse', as Caren Irr puts it (*Toward the Geopolitical Novel*, 15). More specifically, the course addresses the following themes: 1) translation and the spatial boundaries of contemporary literature, 2) the afterlife of postmodernism and the turn toward history and memory, 3) the intense interaction between literature and other media, especially the internet and 'quality' television, 4) the fictional reflection on war, terror and human rights, 5) literature's response to species extinction and climate change. In the final analysis, all of these topics deal with the future or with different imagined futures, be that the future of English, the future of the past, the future of writing, the future of human communities, and the future of the environment. Differently put, they examine different 'ways of being we', to use a phrase from Peter Boxall's introduction to contemporary literature (177). These topics are the subject of this course.

Course objectives

- To reflect upon the distinctive features of the contemporary literary field by reflecting critically on the salient themes and forms of contemporary (Anglophone) fiction;
- To introduce students to academic debates on translation and postmodernism, print and post-print media ecologies, human rights and global war, and environmental problems including climate change;
- To familiarize students with concepts such as world literature, post-postmodernism, intermediality, anthropocene and petroculture;
- To introduce students to relevant methodological insights that will enable them to process and respond to current debates in literary studies and contemporary society.

Pop Songs and Poetry: Theory and Analysis

Full course description

This course is based on the following textbook: Helen Vendler. *Poems, Poets, Poetry: An Introduction and Anthology*. Third edition. Boston: Bedford/St. Martin's, 2009 (ISBN-10: 0312463197). In three respects we shall amplify Vendler's book:

First, by reading some of the theory on the lyric by literary theorists such as Jonathan Culler, Barbara Johnson, Veronica Forrest-Thomson, Jan de Roder, and others. As an academic, you must learn to read literary theory from firsthand sources.

Second, by applying all of the chapters of Vendler's book to modern songs. Songs are also poems, although they are never considered in the conventional histories of poetry and in lyric theory. This is a strange omission, for not only do the "lyrics" of songs show all properties of poetry, the music of the song can also be seen as an exteriorization or enhancement of the musical element of language, emphasized in "regular" poetry through the use of rhyme, rhythm, structure, and images. The lack of attention to the pop song in books on poetry makes these books a bit outdated. Aim of this course is to give the theory of poetry a new life, by reconnecting it with the song.

Finally we will amplify Vendler's book by focusing on gender, ethnicity and sexuality as relevant categories of analysis in the study of poetry and song. There are significant differences in the ways in which male and female poets and singers express themselves: differences in themes, in the intertextual universes poets/singers choose to position themselves, in the use of genre, in forms of addressing the reader. We will address the question how gender, ethnicity and sexuality could be integrated into the theory of the lyric.

Course objectives

- To analyze pop songs and poems in depth.
- To explore the theory of the lyric.
- To integrate gender and diversity into the study of the lyric.
- To become familiar with a number of classic Anglo-American poems and influential pop songs.

Prerequisites

None.

Topics in European Urban History

Full course description

Today, more than half of the world population lives in what is commonly described as cities and towns – concepts which are often vaguely defined. From the first settlements in Mesopotamia onwards, the rise of urban communities has had a great impact upon human life. Consequently, the urban experience draws, and will continue to draw, attention amongst policy makers, scientists from a wide array of disciplines, artists, etc.

Urban history is a field of study that aims to answer some basic questions about the nature of European urbanised societies. This particular 'branch' of History often tends to be multidisciplinary. At least four major approaches exist: a focus on the urbanisation process, urban biography (the history of a particular place), a third approach that deals with numerous themes in the context of cities within an historical framework, and, finally, a more constructivist study of cities which suggests that urban centres have been, and continue to be, shaped by notions of how society at large should be organised. In the latter instance, the argument will be made that urban planning has always been (and still is) – either explicitly or implicitly – informed by social, political and cultural beliefs and preferences. Taking their inspiration from cities such as Berlin, Barcelona, Rotterdam and even Maastricht, some of the assignments in the second part of the course in particular focus upon this complex process.

In subsequent assignments, the above-mentioned approaches will be presented in the context of a discussion of key issues of European urban history. Not only will a variety of European cities be discussed in the course, the study of concrete examples will also help students understand how the urban past of Europe was given shape between the High Middle Ages and today.

Course objectives

- To offer an introduction to the discipline of Urban History.
- To study the history of the urban phenomenon in Europe since the Middle Ages until today.

Prerequisites

At least two courses in the field of History.

Philosophical Ethics

Full course description

We live in a fast-changing world. We have to make decisions about our study, our social relations, and our future. All these decisions are influenced by the norms and values we have developed in the course of our life. The importance of moral considerations is strongly growing. Nowadays, talk about ethics is everywhere, in the bar, in the boardroom, on the shop floor, on television, and in the journals and daily papers. In this course we will explore the field of philosophical ethics: a scientific reflection about morality.

In the first part of this course, we will study the grand narratives in ethics, examining Aristotelian, Stoic, Christian, Kantian, utilitarian, and postmodern approaches to ethics. We will discuss different questions: What is the nature, role, and foundation of ethics? Is ethics about 'the right thing to do', 'the good life', 'the good man', or all three together? Is there a universal moral framework, or can we only speak about a plurality of approaches? What is the relation between ethics and religion?

In the second part of this course, we will study some key disciplinary approaches in ethics. We will discuss environmental ethics and business ethics. Especially, we will pay attention to the application of the grand narratives in ethics to major problems in our society. We will analyze professional practices to identify different ethical aspects.

Course objectives

- To help us to live in a better and freer world.
- To reflect upon our own moral behavior in society.
- To explore the most important ethical approaches that are necessary to understand the main societal problems of today and to act adequately.
- To study primary texts of ethics written by the most eminent philosophers of the past millennia.
- To support ethical decision making by analyzing professional practices.

Prerequisites

None

Great Novels 1850 - Present

Full course description

For centuries, the body of work referred to as 'literature' would first of all entail drama and poetry. But in the course of the nineteenth century, the novel took flight. As its name testifies, the novel a new genre. But what exactly is a novel - Virginia Woolf described it as 'the most pliable of forms'?

Why did it become such a dominant genre? Some have argued that the novel was so successful because it became the medium of the middle class, and the vehicle of its emancipation. To be sure, the novel helped shaping ideas about modern society, about what an individual is or can be,

Bachelor University College Maastricht

about self and other, about love, sex, marriage and property. But even if all those functions can be attributed to the 19th century novel, can the same be said about the 20th century novel? How novel as a genre change over time?

This course will address these and other questions, first and foremost by reading primary texts - key novels from the Western tradition - from 1850 onwards. You will read novels by, for instance, British, Dutch, Belgian, French, German and American authors. The reading and discussion the primary works is the main objective for this course. Besides that, the course will introduce you into the scholarly analysis of literary works. It will acquaint you with major developments in the history of Western literature since 1850, and provide you with a vocabulary/toolkit to discuss and analyse novels. You will gain experience in reading, analyzing and writing about literature.

Course objectives

- To acquaint students with a number of great novels from the western tradition.
- To acquaint students with a basic understanding of periodization in literary history.
- To acquaint students with basic concepts in literary theory.
- To enable students to apply theoretical concepts to their readings of novels.

Prerequisites

None

Recommended reading

6 novels:

- Gustave Flaubert - *Madame Bovary* (1857) (French).
- Franz Kafka - *The Metamorphosis* (1915) (German).
- Virginia Woolf - *Mrs Dalloway* (1925) (British).
- Carson McCullers - *The Member of the Wedding* (1946) (American).
- Milan Kundera - *The Book of Laughter and Forgetting* (1978) (Czech / French).
- Michael Cunningham - *The Hours* (1998) (American).

Secondary material from Andrew Bennett and Nicholas Royle, *An Introduction to Literature, Criticism and Theory*. Routledge, 3rd or 4th ed. (2009).

Reading Philosophers

Full course description

In this course well known philosophical texts will be read and analyzed in detail. Reading philosophers, that is, the reading of some of their primary texts is not only a pleasure in itself: most of the more interesting philosophers are also famous stylists. Therefore it is important to read the original texts instead of always relying on handbooks or (internet) encyclopedia to acquaint oneself with the central ideas of philosophers.

Moreover, there is a lot to learn from reading philosophers themselves, to see how they position themselves in the tradition of philosophy and in the contemporary intellectual debate, to determine what interesting problems are, and how one could go about searching for some answers or even solutions.

Reading philosophers themselves also has merit for another reason: it turns out that philosophers use a variety of writing styles and publication media like a scientific treatise, a monograph, an essay, a collection of aphorisms or a novel. And last but not least: they provide the best introduction into some of the classical philosophical problems like: What can we know? How should we value? What is justice? Is there something like moral sense?

In the course we single out a group of 6 philosophers (with reservation): Plato, Spinoza, Voltaire, Schopenhauer, Wittgenstein and Margalit. They are responsible for some of the best philosophical work that has been produced in the western tradition.

Course objectives

- To acquaint students with pivotal philosophical texts.
- To help students read primary texts of important philosophers and get intellectual pleasure from it.
- To introduce some classical philosophical problems.
- To become aware of different styles and sorts of philosophy.

Prerequisites

None

States and Nations in Europe, from the Middle Ages to the First World War

Full course description

The states and nations as we know them today have not always been around. In fact, they are both products of history, which emerged as a result of specific circumstances. This course analyses the emergence and development of state, nation and nationalism in Europe since the Middle Ages.

In addition, it introduces the students to the development of international relations and diplomacy from the High Middle Ages until the year 1919. As the course proceeds chronologically from the Middle Ages to the twentieth century, it provides the students with an overview of European political history.

Course objectives

- To examine nation-building and nationalism in early-modern and modern Europe.
- To discuss the development of “the state” as well as the diversity in state- and nation-building since the Middle Ages.
- To introduce the students to the history of international relations since the fifteenth century until 1919.

Prerequisites

HUM1013 The Idea of Europe: The Intellectual History of Europe or any other 1000-level Humanities course.

History of Psychology

Full course description

Psychology has always straddled the borderlines between the natural and the social sciences. Modern psychology has its origins in the scientific revolution of 16th century. The category of consciousness according to some defied physics, while others set out to reduce the mental to the material. In the 19th century the theory of evolution made inroads into traditional introspective philosophy of mind, and led to new approaches in the study of behavior. For some the proper object of psychology should be behavior instead of consciousness. So, over time, psychology has exhibited interesting ambiguities both about its own nature.

This course will follow some of these ambiguities, and will illuminate a number of traditional and modern problems of psychology. The following issues will be dealt with:

- The Scientific revolution as the origin of modern psychology;
- Consciousness. Mind and body, materialism and spiritualism;
- The experimental method and the rise of psychology in the 19th century;
- Man's place in nature. The theory of evolution and its influence on psychology;
- Mental health, medicine and psychology;
- The psychological society. The diffusion of psychology in the workplace, culture and our personal life;
- The cognitive revolution. The return of mind in psychology;
- Brain as mind. The rise of cognitive neuroscience and its implications for the mind.

Course objectives

- To become familiar with the development of psychology since the 16th century.
- To acquire knowledge about the scientific and social context in which psychology developed.

Prerequisites

This course is included under the Humanities, but is also very relevant for Social Science students focusing on psychology. It is important to note that this is primarily a course in history, dealing with

Bachelor University College Maastricht

psychology as its topic. It is not a psychology course with a historical dimension. As prerequisite for the course students will either have done some course(s) in history or in psychology, or, ideally, in both.

Recommended reading

All reading material will be handed out at the beginning of the course.

Media and Technology; Philosophical Perspectives

Full course description

Discussions about the changes media and technology bring to culture, and whether these are to be judged good or bad, are as old as philosophy itself. Media and technology have always had their 'apocalyptic', critics and their 'utopian'apologists. Examining the ideas of Plato, Kierkegaard, and Marx we will see how these debates have evolved over the centuries. With the rapid development and spread of media and technology in the 20th and 21st century, the debate between these two parties has intensified. Yet we are now beginning to realize that these overarching approaches have limited value when it comes to evaluating media and technology.

In this course, we will concentrate on a number of philosophical approaches that help us understand the relationship between media and technology and our lived experience. We will discuss media theory (McLuhan, Innis, Ong, Kittler) and discuss whether specific technologies and media, like writing and print, provoke structural changes in patterns of thought, action and experience. We will also deal with the critical philosophies of technology in the Marxist tradition (Marcuse), the metaphysical tradition (Heidegger) and the feminist tradition. These topics encourage us to discuss whether the machines that are supposed to serve us, are now turning the tables on us, making us humans their servants. Is technology alienating us from life and from our humanity?

We will then move on to present day philosophy of media and technology that steers away from essentialist condemnations or praises of technology and media. We will address the work of Don Ihde and Peter Paul Verbeek on technological mediation and the hermeneutics of technology. We will examine work that examines the moral aspects of emerging technologies. We will conclude by examining the role that robotics and algorithms play in organizing our sociotechnical world.

Course objectives

- To introduce students to a number of central themes in the philosophy of media

Bachelor University College Maastricht

and technology.

- To investigate what is at stake in different philosophical methodologies and approaches to media and technology

Cultural Studies II: Visual Cultures

Full course description

This course will explore the variety of visual cultures and the theoretical insights garnered by the study of this interdisciplinary field. Straddling cultural studies, art history, museum studies, media studies, performance studies, literary studies, and science studies, the field of visual culture at its most expansive combines theories and methods from across the academy. We will investigate visual cultures from these exciting and challenging (inter)disciplinary perspectives.

The course presents visual culture as a ubiquitous facet of modern life that perhaps more than any other component shapes and informs our understanding of self, society, and the world. Hence, it demands our careful attention and critical parsing of its workings at all levels of daily life. Our foray into the field will include examining the benefits of this inclusive mode of analysis, for instance in the range of objects available for study, as well as the drawbacks, particularly in terms of methodological rigor and the overinvestment in ocularcentric forms of knowledge. The student will be invited to scrutinize their disciplinary assumptions, to develop their toolbox of concepts, and to analyse objects that are rarely considered inside the university.

Starting with an introduction to visual culture, we'll investigate the terms vision, visibility, and

image in conjunction with varying conceptualizations of culture. Each subsequent unit will deal with a “site” of visual culture that offers an object of study, a theoretical problem, and an interdisciplinary opportunity. We will study visual cultures from high to low, and examine how these forms are quickly transforming and breaking barriers of category and genre. The principle sites of inquiry traverse fashion, gaming, museum exhibitions, medical imaging, comics, and cinema. The methods from visual culture studies we will experiment with include cultural materialism, psychoanalysis, semiotics, poststructuralism, narratology, phenomenology, affect theory, feminism and cultural analysis.

Course objectives

- To understand the way in which visual culture is conceptualized in relation to its disciplinary, historical, and theoretical context.
- To evaluate the strengths and weaknesses of different theories of visual culture.
- To select the appropriate theor(ies) and methodological tool(s) for analysis that best suits the material and argument.
- To communicate the way in which different approaches to visual culture mobilize disciplinary points of view using specialized terms.
- To demonstrate awareness of the larger social, political, and sexual issues involved in the academic study of visual culture as it relates to the body/subjectivity.
- To recognize the interdisciplinary nature of visual culture in its historical and contemporary overlap with scientific, artistic, and economic imaginaries.

Prerequisites

At least one Humanities course.

Cultural Remembrances

Full course description

Taking its cue from the current focus of the humanities on practices of collective cultural remembrance, the course focuses on literature as narrative and performative medium of memory. Literature fulfils a crucial role in recreating aspects of the past in the present. But is there a difference between 'memory in literature' and 'memory of literature'? Without remembrance and representation, cultural and individual life would be impossible; the same counts for cultural oblivion: total recall would mean madness. Not only individuals, but also social groups and nations as a whole construct their identities by re-appropriating and 'inventing' the past. Here memory and identity politics merge. The course will introduce central theories of memory and remembrance. Around 1900, the sociologist Maurice Halbwachs and the art historian Aby Warburg independently developed theories of "collective memory". Yet, it was not until the 1980s that Pierre Nora's *lieux de mémoire* and Jan and Aleida Assmann's concept of Cultural memory made memory studies resurface.

Moreover, cultural remembrance depends entirely on processes of (re-)mediation. That is where literature, rituals, and the arts enter the field. Beginning with modern authors like Marcel Proust and Edgar Allan Poe, the theoretical texts will be accompanied by close readings of literary texts that shed light on the poetical creation of remembrance. With regards to literary analysis it is important to define the way in which remembrance and poetic imagination interact.

Memory studies started within Holocaust studies at the very moment when the generation of survivors passed away. Therefore, research in trauma and remembrance has taken centre stage. The course follows a genealogical approach to the "trauma paradigm" in memory studies. It refers back to Sigmund Freud's theory of "traumatic neurosis" and connects it with new approaches in trauma theory. It will focus on the question of how traumatic experiences have been expressed and represented in modern literature. Our central example is Kurt Vonnegut's novel *Slaughterhouse 5* (1969). The course connects questions of cultural remembrance and trauma experience via literary narration, style, and intertextuality. Its focus on the role of gender in memory draws attention to the relevance of body images and gender myths for the construction of narrations and images of the past.

A post-colonial dimension will be added when we take a close look at the debate around the contested concepts of archive and repertoire in memory studies. If we link the performative repertoire to cultural memory, we will have to go beyond the long established Western model of memory as a fixed, mostly written "storehouse" of the past. If we take repertoire into account, we will have to consider and acknowledge embodied, sensual remembrance, narrated oral memory and gestural ritual repertoires as equal to texts, monuments and objects.

Course objectives

- To familiarize students with some of the key theoretical and methodological approaches within cultural memory studies: Halbwachs, Warburg, Nora, Assmann, Erll, Rigney.
- To provide students with an introduction into trauma (theory) and memory.
- To teach students close reading of literary texts and analyze literary strategies, styles and narrations of remembrance and trauma.
- To teach students to analyze literature as *ars memoriae*, reconstruct the interaction of memory imagination and poetic imagination: memory in literature and memory of literature.

- To introduce students to Aby Warburg's theory of the "memory of images" and pathos formulas
- To enable students to identify and analyze the role of gender in constructions of cultural remembrance of the Holocaust.
- To introduce students to the (political) debate and the post-colonial dimension around the paradigms of archive and repertoire as concepts of cultural memory.
- To analyze debates connected to contested memorial monuments, competing victim memories and "multidirectional memory" (Rothberg)

Prerequisites

HUM1003 Cultural Studies I or HUM2003 The Making of Crucial Differences, and some knowledge/interest in close reading of literary texts.

Science, Power and the Construction of Facts

Full course description

Science is the system of knowledge production through which truths are constructed in much of Western societies, and as a consequence is an incredibly powerful institution that requires critical examination. At the same point in time, significant contemporary movements of "alternative facts"

(Conway 2017) and "post-truth politics" are underway (Roberts, 2010). What is the relationship between these two phenomenon, and how is power enacted through the establishment

of “facts”? In order to understand the power Science enacts in its production of “facts” this course looks to the social, cultural, historical, political, and economic contexts through which science is practiced and scientific knowledge is circulated through society. In doing so we will take a closer look at the production and dissemination of technoscience outputs, and will study science in action in its immediate environment as well as in its role and position in society. To do so we consider science and its scientists as ‘a tribe’. To take this idea seriously we need to critically analyze notions of objectivity, expertise, commercialisation, integrity, and credibility that are central to scientific knowledge production. This perspective will help us to understand how science operates in today’s complex world. To gain insight in science we zoom in on the organization of knowledge production and its collaborative character. We also study processes in which credible facts are established and published. Furthermore, this course also pays attention to the integrity of science and in particular its grey areas. Beside the immediate context in which scientific facts are established (i.e. the lab), the course also takes into account the wider socio-economic context in which science operates. This involves not only the commercialization of science, but also the way its promises and expectations are related to our hopes and fears. Finally, you will gain insights into the way the cultural-historical contexts affects the interpretation of facts. It is along these lines that we enter the world of the scientists. Based on discussions and analyses of these topics the course aims to make you reflect critically on ‘common sense’ views of the making and use of scientific claims. Besides tutorial meetings, the course also involves lectures, discussion meetings, video analysis, and a visit to a scientific lab for an interview.

Course objectives

By the end of this course students should be able:

- To describe the contemporary challenges and dynamics of knowledge production in the sciences.
- To identify the complexities of how scientific knowledge is distributed and communicated in society.
- To critically analyze ‘common sense’ views of the making and use of scientific claims.

Religion and Secularization

Full course description

The course provides a broad approach to religion as a cultural phenomenon. It focuses on the following groups of questions and topics:

1. *Defining religion*

What is religion about? How does religion differ from the sciences and the arts? What do secularization processes involve? In this part of the course we will look into some significant philosophical perspectives on the nature of religion and secularism.

2. *On the contents of religion*

We will briefly consider the most important characteristics of the major world religions. Against this background we will discuss a number of key narratives and themes from the Judeo-Christian heritage, taken from the Hebrew Bible and the New Testament (such as the creation story, book of Job, death and resurrection of Christ, epistles by Paul).

3. *On the politics of religion*

The last part of the course will look at the role of religion and religious institutions within political power structures, ranging from the Vatican to the Middle-East.

Course objectives

- To familiarize students with the academic study of religion as a cultural phenomenon against the background of a secularizing world.
- To provide an insight into key ideas, themes and arguments on the nature, function, and politics of religion.

Prerequisites

HUM1007 Introduction to Philosophy *or* HUM2008 Ancient Philosophy *or* HUM2021 Medieval Civilization *or* COR1002 Philosophy of Science *or* HUM2055 History of Psychology.

A Cultural Critique of Our Aging Society

Full course description

If you have enjoyed courses in crucial differences, cultural studies, and identities, this course will be another eye-opener. It focuses on age as identity marker and is set up in true interdisciplinary fashion encompassing perspectives from economy, history, the arts, globalisation and gender studies amongst others. If you believe aging is a far removed from your personal sphere - think twice and continue reading!

Headlines everywhere tell us that ours is a graying world and that population aging will be a defining influence on our twenty-first century, radically affecting public health and national economies. These demographic predictions—the result of the trends of declining mortality and increasing longevity—are typically accompanied by dire warnings of the challenges ahead: unsustainable pension systems which will encumber younger generations, the critical need for more caregivers and more resources to care for the increasing numbers of those who are frail and dependent, concerns about maintaining technological progress and competitive workforces with an aging labor force, etc. Rarely are such numbers presented in terms of the possible benefits that population aging might bring, such as in experienced leadership, informal caregiving, and a more flexible labor force less hampered by child care. Also often excluded from these projections is any sense of what life is actually like for the diverse millions of people who grow into old age. How do we know what these numbers will mean for our economies, our social structures, our loved ones, and ourselves? To begin to address that question, we need to understand better what it means to grow old in the twenty first century and how this meaning may have developed or changed over the course of history or be differently shaped by national and transnational cultures. Also, it requires research into the many images and stories of aging that circulate in popular culture and influence the way we think about older people. This, then, will form the heart of the inquiry we will make in this course. We will explore what aging is and means from different disciplinary, historical and (trans)national perspectives, examining the concerns raised about aging societies and the causes and consequences of ageism, which is prejudice or discrimination based upon a person's age.

Aging is a topic that we all have a stake in. On one level, this stake is very personal. If we live the long lives we desire, we will all become old, whether or not the label “old” is one we fear or desire. On a larger scale, the concerns of population aging cross every discipline and ageism pervades all parts of our social and personal lives, even when we don’t recognize it. Whatever occupation you pursue, a deeper understanding of aging will have relevance. This course will prepare you to engage critically in the current and future debates about our aging society and to interrogate your hopes and fears for your own aging experiences. Theoretically and methodologically, this course is part of diversity studies as it adds the category of age to other identity markers, such as gender, sexuality, class, ethnicity, and religion.

Course objectives

- To understand age as an identity category that intersects with other categories like gender, sexuality, disability, and ethnicity.
- To distinguish between multiple, disciplinarily-influenced ways of defining ‘age’ including chronologically, functionally, subjectively, and culturally.
- To recognize ageist discourses (cf. the reduction of aging to physical and mental decline) and practices and to reflect on attitudes towards age.
- To distinguish between realistic concerns and the alarmist hype surrounding global population aging.
- To understand different methods that are implemented in aging research, ranging from visual analysis to ethnographic approaches.

Prerequisites

A 1000- or 2000-level course in humanities or social sciences, for instance HUM1003 Cultural Studies I: Doing Cultural Studies, HUM2003 The Making of Crucial Differences, SSC1029 Sociological Perspectives or SSC1003/2065 Theories of Social Order.

Recommended reading

- E-reader containing excerpts from books and relevant journals.

Medical Humanities: Bodies & Minds, Histories of the Normal and the Pathological

Full course description

Medical humanities acknowledge that instead of being fixed entities, health and illness are constantly changing, ambiguous phenomena. What is called healthy (sane) or ill (insane) depends indeed on a large variety of issues and dynamics: cultural, socio-economical, and religious aspects; moral system; legal system; science; technology; art and media etc. This course approaches the question of health and illness through a philosophical, anthropological and sociological exploration of “bodies” and “minds”. Through a historical and cross-cultural perspective it will discuss various concepts of body and mind. We will discuss how and why some bodies and minds are considered as normal and others as abnormal or pathological. For this we will draw on scientific, social, cultural and economic contexts, but also on how bodies and minds are represented in art and (popular) culture. Cases include cosmetic surgery; the modern hospital; boxing in the ghetto; organ transplantation; depression; menopause; prostheses in Paralympic athletes; medical imaging technologies; the war on cancer; depression.

Course objectives

- To gain knowledge of different influential conceptions of ‘body’ and ‘mind’, ‘healthy’ and ‘sick’, ‘normal’ and ‘pathological’, ‘regular’ and ‘deviant’.
- To gain understanding of how cultural, social, economic, legal, scientific and religious contexts play a role in the construction and consequences of these distinctions.

Prerequisites

NB: This course is highly interdisciplinary (philosophy, history, cultural studies, medical anthropology & sociology, several branches of medicine). It is situated at the crossroads of Social Sciences, Humanities and Science.

Prerequisite

COR1002 philosophy of science

Recommended reading

- E-Reader. (Articles that are not included in the E-Reader will be made available for photocopying during the course). A book on a special topic in this field, selected by you from a list offered.

Acts of Literature: The Role of prose, Poetry and Plays in a Changing World

Full course description

As stated in Eleonora Belfiore's and Oliver Bennett's *The social impact of the arts: An intellectual history* (2008) the question of what the function of literature could be or should be produced from Aristotle on many answers that could roughly be grouped under the following overarching concepts: catharsis (emotional, didactical, or intellectual), personal well-being (literature as therapy, play, or experience), education and self-development (basically the humanist's view of literature as, in Stephen Spender's words, 'central medium for the realization of man's search for significance in life'), moral improvement and civilization (French Enlightenment, Kant, Martha Nussbaum), political instrument (Brecht, social realism, nazi and fascist literature, feminist, postcolonial, and minority literature, often also in the sense of the unmasking of literature as vehicles for accepting hierarchies in society: Orwell, Foucault, Said, the Frankfurt School), social stratification (Weber, Simmel, Bourdieu), and the rejection of any of these functions, of instrumentalising literature (Kant again, *l'art pour l'art*).

Against the backdrop of this theoretical discourse on the functions of literature and the recent merging of the functions of education and moral improvement for the benefit of democracy, the course's focus is on concrete 'acts of literature': cases in which prose (novels and stories as well as literary essays), poetry, or plays played a formative role in societal change or were regarded as the voice of this. In the two weekly group meetings the first will focus on one piece of literature which will be analyzed as an 'act of literature' in the context of societal change (Goethe, Toni Morrison, Achebe, Woolf, Orwell, Arthur Miller, Harriet Beecher Stow, Harper Lee, Primo Levi), the second will focus on a particular period of societal change and the literature that played a vital role in this: the aftermath of both World Wars, the Sixties, the 'roaring nineties', the early German romantic period (here especially poems, stories, and literary essays are discussed).

Course objectives

The main aims of this course are:

- to acquaint the students with the history of ideas on possible functions of literature.
- to introduce students to periods of societal change in western and non-western societies and the role of literature played in it.
- to provide the students with analytical tools for contextualizing (historicizing, situating, comparing) the case studies in the course.
- to teach the students to present their own case studies as possible contributions to the course

Introduction to Academic Skills I

Full course description

The transition from secondary to tertiary education is often experienced as a rather challenging one for students, especially considering the expectations at university with regard to students' academic skills, such as essay writing, critical and analytical thinking, or skills such as argumentation. It is therefore imperative to support and train students right from the start to take on a professional ethos with regard to their university studies and their personal and academic development. The skills course Introduction to Academic Skills consists of a semester-long program spanning three periods. In this skills course students are encouraged to take their academic development into their own hands. Seminars, practical sessions and (written) assignments will focus on acquainting students with the core academic skills needed to be successful at university. Moreover, the sessions are set up in such a way that students will be able to put their newly acquired skills and insights into practice in the courses that run parallel to this skills course. Through continuous reflection on their personal learning process in combination with periodical assessment of this process, students will be able to conclude this course with a clear overview of their competencies with regards to general academic skills as well as specific skills such as: academic study skills, research skills, analytical and critical thinking skills, academic writing skills, (time) management and organizational skills. Successful completion of SKI1008 is essential to be able to register for SKI1009 Introduction to Academic Skills II.

Course objectives

- To acquaint students with the academic skills necessary.

Prerequisites

This course is not open to exchange students.

Recommended reading

- Required reading material will be available in on Student Portal.

Presentation Skills

Full course description

This course will help you to prepare for future presentations during your studies as well as in your professional career. Apart from a general introduction to fundamental presentation skills in the opening lecture, this course is based on learning-by-doing. Each student will give four presentations: one 5-minute presentation on an informal topic determined by the course coordinator and three 15-minute presentations of an academic nature. Students choose their own topics for their academic presentations; preferably topics they are interested in and have already researched. Fellow students provide extensive oral and written feedback after each presentation.

Students will receive feedback on their presentations from their peers and their tutor, with regards to e.g.

- *Delivery*: speech pace and pauses; tone of voice; body language such as posture, gestures, movement.
- *Structure*: providing an introduction, body and conclusion, with clear transitions between different sections of a presentation, using a logical sequence of information, with main points and subpoints.
- *Content*: providing sound descriptions and interpretations of the main topics, supported by relevant academic methods and theories and other reliable sources, and clarified with examples or metaphors.
- *Visual Aids*: using slideware that supports, and does not distract from, the content of the presentation, including key words, clarifying images such as (photo)graphs, and entertaining

touches like cartoons.

- *Audience*: tailoring the form and content of one's message to the audience; interacting with the audience during the presentation as well as adequately responding to their questions afterwards.
- *Feedback*: providing and receiving constructive feedback on presentations to/from fellow students.

Course objectives

The purpose of this course is to improve your (academic) presentation skills, by learning how to:

- Identify fundamental components of an academic presentation.
- Structure a message in a clear, concise and convincing manner.
- Convey complex information clearly, both verbally and visually.
- Explore ways to engage an audience and make your message stick.
- Cope with nervous tension and increase your confidence as a presenter.
- To give and receive constructive feedback on an academic presentation.

Prerequisites

Students must be familiar with slideware, such as PowerPoint or Prezi.

Recommended reading

- E-reader.

Argumentation I

Full course description

In this skills training we work from two fundamental assumptions regarding arguments:

1. They have a specific structure, which can be made visible and evaluated.
2. The quality of an argument depends on its structure as much as it depends on its content.

In order to “get a grip” on arguments the course is divided into four parts that introduce information and exercises to gradually develop the skill of argument analysis. The first part will serve as an introduction discussing the general characteristics and typology of arguments. Furthermore, in this part students learn how arguments can be standardized and how argumentative structures can be visualized by drawing patterns. The core question this part of the course seeks to answer is: What is the structure of arguments and how can one reveal this structure? This part of the course will also contain an introductory lecture, entitled “Standardizing Arguments”.

In part two an informal but systematic method for evaluating the quality of arguments, the ARG-method, is introduced. By assessing the acceptability of premises, the relevance of premises with regards to the conclusion they are supposed to support, and the logical connection between premises and the following conclusion, the ARG-method enables us to examine both structure and content of an argument. During this part of the course an introduction to bad arguments, so-called fallacies, is provided as well. A Lecture, “Evaluating Arguments”, will accompany this part of the course.

In the third part the knowledge and skills provided in the first two parts will be applied to complete texts, seeking to isolate the arguments they present in a systematic way and evaluate whether or not they are good arguments.

Part four moves beyond the analysis of already existing arguments. In this part, standardization and patterns of arguments, as well as the ARG-method, will be used to construct arguments. Furthermore it will be practiced how the skills learned throughout the course can be applied for the purpose of writing academic papers.

Note: Students considering enrolling for the skill trainings in argumentation should be aware that the course will not focus on rhetoric and debating skills (although it can be assumed that the analytical skills acquired in this course will be helpful for debates).

Course objectives

This skills training provides a general introduction to the analysis of arguments. At the end of the skills training students should be able to:

- Identify and carve out the underlying structures and logical connections of written and verbal arguments.
- Translate these structures into a visual representation by drawing patterns of these arguments.
- Evaluate arguments with regards to their structure and content by applying Govier’s “ARG method” (this entails the ability to identify fallacies).
- Build and present own arguments in a structured and cogent fashion, taking the evaluative

criteria of the “ARG method” into account.

- Improve their approach to structure papers, exam answers and presentations.

Prerequisites

None

Recommended reading

- E-Readers with various articles and chapters on argument analysis and logic.

Ethnography and Qualitative Interviewing I

Full course description

Qualitative Research is an overarching term for a diverse range of approaches and methods within different research disciplines. Qualitative researchers essentially “study things in their natural settings, attempting to make sense of, or interpret, phenomena in terms of the meanings people bring to them” (Ritchie 2003: 3). Ethnography is one form of qualitative research and means literally “writing culture” (Hesse-Biber 2006: 230). Often called “participant observation”, ethnography is based on the simple idea, that in order to understand what people are up to, it is best to observe them by interacting with them up close and personal within their everyday lives. Ethnographers provide detailed accounts of the everyday practices of a culture, subculture, organisation or group by “hanging out”, observing and recording the ongoing social life by taking fieldnotes and/or providing “thick descriptions” (Hesse-Biber 2006: 230).

This is part one of an overall sequence of three skills trainings within which students design and implement their own study, analyze the data collected, and report on their research findings. In this

first module students will learn about various research tools, such as participant observation and qualitative interviewing. Students will learn how to take fieldnotes and will be introduced to various forms of interviewing, such as the structured interview, the in-depth interview, focus groups and life history interviews. Taking fieldnotes and interviewing will be practiced in and outside of the classroom. Moreover, students will be guided through the process of crafting a feasible research question and the appropriate design for the study that they will pursue in the follow up modules of this course. The research questions will provide the basis for students' investigations. What is to be investigated is entirely up to the student(s). However they will be provided with guidance in the formulation of their topics.

In this course, students will have to conduct at least one interview, thus you will need to have access to a tape recorder and/or video camera.

Note: This is a time and labor intensive skills training, especially once you have begun data collection in the second module of the course. Most of the work that you are required to accomplish will occur outside of the class setting. Students are expected to work independently and should count on having to invest an extra two to four hours per week for interviewing, transcribing the interviews and working on the data analysis.

Course objectives

- To get a general impression of the qualitative research process and its fundamental differences to quantitative data analysis.
- To become familiar with the "art" of qualitative interviewing.
- To practice taking fieldnotes.
- To provide students with hands-on experience in crafting their own study and writing a feasible research proposal.

Prerequisites

SKI1004 Research Methods I, SKI1005 Research Methods II and PRO1012 Research Project.

Recommended

This course is for students with a background or sincere interest in sociology, anthropology and/or cultural studies.

Lab Skills: Biochemistry

Full course description

Laboratory skills are essential for students who want to pursue a Life Science oriented master study. In this skills training you will get acquainted with the basic laboratory skills in biochemistry. Training involves safety and Good Laboratory Practice, as well as some essential biochemistry techniques like DNA isolation, enzyme kinetics, adsorption/fluorescence spectroscopy, gel electrophoresis, and protein purification. You will work in teams of two and prepare your own protocol for each practical.

Course objectives

- To develop laboratory skills in the field of biochemistry.

Prerequisites

This course is designed to be taken in combination with SCI2035 Biochemistry. Students who wish to take this course should concurrently enroll in SCI2035 Biochemistry or have taken SCI2035 Biochemistry prior to enrolling in SKI2086.

Ethnography and Qualitative Interviewing II

Full course description

This is the second of a three module course on qualitative research methods. This module builds on what students have learned in part I and is designed to guide them through the steps of data collection for their own qualitative study. Students will work on gaining access to their research site and will begin the interview process and/or their observations and conversations with their research participants as participant observers. Students will be introduced to the process of transcribing the interviews, coding the data and memo writing. All three steps are part of qualitative data analysis. As students develop their research projects, they will be challenged to link their specific research questions to larger processes and forces. They will also be asked to consider who might find their research useful and how the results of their investigations might be utilized to promote social change. In-depth analysis of the intricacies underlying contemporary social, cultural, and political discourses and practices, provides the basis for good social research.

Note: This is a time and labor intensive skills training, especially once you have begun data collection. Most of the work that you are required to accomplish for the training will occur outside of the class setting. Students are expected to work independently and should count on having to invest an extra two to four hours per week for interviewing, transcribing the interviews and working on the data collection.

Course objectives

- To provide students with hands-on experience in collecting data for their own study, i.e. students will gain experience in “doing observations”, taking fieldnotes, and qualitative interviewing.
- To experience transcribing interviews.
- To become familiar with qualitative data analysis.

Writing in an Academic Context: Improving Argumentation and Style

Full course description

This course is designed to help students polish their academic writing skills. Since an important aspect of good writing is the ability to convey ideas as clearly as possible to the reader, we will examine the nuts and bolts of writing that are essential to this. This may include rules of syntax and how to make your writing more accessible, paragraphing and overall coherence, a closer look at the structural parts of an academic paper, and how to improve conciseness and coherence in your paper. Furthermore, we will practice using proofreading tools such as the reverse outline and creating a personal checklist.

During the course, we will look beyond the general ideas of academic articles and papers to see the mechanisms of how these papers work, especially on a technical level. This will be done in the form of weekly exercises that you will prepare in advance and discuss in class, and by giving in-depth feedback to your peer's writing during in-class evaluations. Additionally, you will put what we discuss in class into practice by reviewing your own paper and critiquing other students' papers.

It is safe to say this course is interactive and writing intensive and that you will be reading and writing both inside and outside of class. Although sharing your writing with others can seem intimidating, rest assured that this writing course is a safe space for you to work, make mistakes, and improve your writing.

Course objectives

- To develop awareness of the conventions of academic writing.
- To understand how to write clearly and coherently in an academic context.
- To develop writing through peer- and tutor feedback.
- To practice pre-writing and proofreading techniques.

Prerequisites

None.

Lab Skills MLS: Human Anatomy & Histology

Full course description

The aim of this skills training is to familiarize students with skills and knowledge concerning human anatomy and histology. The histology part entails a practical introduction to virtual microscopy, followed by microscopic studies of the histology of blood vessels, individual cell types and structures in diverse tissues of the circulatory, urinary, respiratory and digestive tract where the computer serves as microscope. Each "virtual microscopy" session start with a short 10- minute lecture introducing the topic. During the sessions, students use a handbook (Powerpoint file) with tasks and questions. At the end of each session students will have produced their own booklet, complete with annotated histology pictures. If you have a histology book, it is highly advisable to bring it to the course. Students are encouraged to work in groups of two (in the histology section of the course) or more (in the anatomy section of the course) to discuss their findings. The macroscopy part of the course entails an introduction to the autopsy room. Students will perform observatory studies on corpses, models and human plastinates guided by a list of tasks and questions, part of which needs to be studied in advance at home.

Both for the histology sessions and the anatomy sessions, a self-study manual and a manual for the actual practical session are provided. Students are expected to prepare the self-study manuals at home - and questions on those manuals will be asked at the beginning of each session.

Course objectives

- To gain knowledge and experience in microscopic studies of the histology of blood vessels, tissue types and organs.
- To gain knowledge and experience in macroscopic studies on corpses with regard to the anatomy of the thorax and abdomen.
- To gain knowledge and experience in macroscopic studies on human plastinates and models with regard to the anatomy of the kidney, lungs, heart, vessels and the digestive tract.

Prerequisites

This course is designed to be taken in combination with SCI2009 Human Physiology. Students who wish to take this course should concurrently enroll in SCI2009 Human Physiology or have taken it or SCI2008 Homeostatic Principles of Human Physiology prior to enrolling in SKI2079.

Back to the Sources

Full course description

Reading history is not the same as researching it. Researching history means pursuing one's own enquiry into the past, instead of following another historian's argument about it. Above all, researching history implies not relying on 'second-hand' information. Instead, it involves going back to the primary historical sources as much as possible. However, going back to the sources is not as simple and straightforward as it may sound. There are all sorts of difficulties involved, intellectual as well as practical.

This Skills is offering a first introduction to the ways historians deal with these difficulties. During the Skills student will discuss the information value of several historical sources: international treaties, public political statements, memoirs, archival records, public opinion sources. The several specific sources that you will discuss during the course will all be related to one specific theme: the origins of the first European Community, the European Coal and Steel Community (ECSC), established in 1952 (and the first that ceased to exist, in 2002). This early episode in the history of European integration is particularly suited for an introduction to historical research because a variety of archival and other primary sources is readily available. It is also an interesting topic because it has led to controversy among historians. What was the role of the leading politicians and officials involved, especially Schuman and Monnet? To what extent did existing idealism about European unity play a role? Or was the initiative to establish the ECSC rather inspired by national self-interest of the states involved?

This Skills will be a useful guide to those students who are keen on doing historical research in the future. But it will also prove to be of value to those with a general interest in history and in the history of the European integration process in particular. By offering knowledge and insights on how the historian works, it will mentally equip them to assess the strong and the weak aspects of the histories they will be reading to inform themselves on specific topics, especially topics concerned with the process of European integration.

Course objectives

- To familiarize students with the most important types of primary sources (esp. on the history of the EU) and the ways to find these sources (heuristic objective).
- To stimulate a critical and methodical attitude towards sources (critical objective).
- To differentiate between primary and secondary sources.
- To appreciate the importance of primary sources for the study of historical phenomena in general.
- To recognize the different characteristics and pitfalls of the several types of primary sources.

Lab Skills: Cell Biology

Full course description

The aim of this course is to develop competences in the planning and performance of experiments and in the evaluation of results using common techniques in molecular genetics and cell biology. The skills training starts with an introductory lecture providing information on the assignments as well as an introduction into Good Laboratory Practice (GLP) and Safe Laboratory Practice (SLP). Students perform experiments on several different topics.

Course objectives

- To develop laboratory skills in the field of cell biology.

Prerequisites

This course is designed to be taken in combination with SCI2037 Cell Biology. Students who wish to take this course should concurrently enroll in SCI2037 Cell Biology or have taken it or SCI2003 Molecular Genetics and Cell Biology prior to enrolling in SKI2077.

Recommended reading

- There is no main book for this course. A list of the books in which these suggested readings can be found is provided; these books are all available in the Reading Room at UCM and/or in the library at the UNS50. In addition to the books, E-reader will be posted in the Student Portal.

Preparing Conference

Full course description

A conference is a platform for scholars or professionals to meet and share ideas, to present new discoveries and to connect to fellow academics. At a conference papers and research posters are presented, workshops are offered for skill development, and seminars are held to familiarise the scientific community with current academic topics and new developments. As an academic you visit a conference to present your own work, see others' work and to start possible collaborations.

This skills training focuses on the preparation and planning of a conference. Students will write an extensive plan for the annual UCM Liberal Arts and Sciences conference to be held in the third period of this semester. Students will do the following in order to develop the conference plan and blueprint:

1. Discuss the shared assumptions, values and goals of Liberal Arts and Sciences and an open curriculum and turn that into a subtheme for the conference.
2. Discuss and compare individual interests within the group to find similarities and differences and turn that into illustrative examples of Liberal Arts and Sciences that can be used for workshops and informative sessions at the conference.
3. Conduct an analysis of the target audience for the conference.
4. Discuss instructional design (teaching and learning) in terms of knowledge, skills and attitudes and use that to work out lesson plans for the conference for workshops and informative sessions.

Note that this skills training is not only about presentation and organisation skills. It also aims at giving students the opportunity to learn more about education and teaching and instructional design.

The skills training relies heavily on students' personal experiences from having been in a liberal arts and sciences program for several semesters and on being able to make that explicit to others. On the one hand, this will be used while preparing the conference and to inform first semester UCM students. On the other hand, participating students will benefit from the skills training and its follow-ups by fostering a preparation for e.g. Capstone and master's applications for which a profound understanding and expression of a student's academic interest will be necessary.

The skills training puts a strong emphasis on instructional design. Individual contributions to the conference are considered to be educational units and approached as such. For participating students, this will be an opportunity to gain experience with developing and designing intended learning objectives and then implementing teaching and learning activities for a target group and audience. Students will inform themselves on different approaches to teaching and apply them to - preparing lesson plans for the informative sessions, workshops and plenary sessions offered at the conference.

A wide variety of individual interests in the Sciences, Social Sciences and Humanities is welcomed in order to offer a diverse conference. This skills training fosters an interdisciplinary approach among the participating students.

Course objectives

- To train students in skills required for preparing an academic conference.
- To give students the opportunity to position their interest within a field of their choice and academic fields in general and express that by means of activities at a conference such as lectures and workshops.
- To train students in reviewing a topic in their field of interest and turn that into an informative session and workshop for the conference.
- To train students to work together and set up a plan for a conference.
- To train students in using a framework for instructional design and apply its principles to their individual contributions to the conference.
- To train students in writing lesson plans for their individual contributions to the conference and the plenary sessions that will be offered.
- To train students in working together on preparing a conference.

Prerequisites

NB: Students who register for SKI3050 Preparing Conference must also take PRO3006 Conference. It is not possible to take either of these modules separately due to the specific nature of this skills training and the project.

Prerequisite

Students should be at least in their fourth semester at UCM, i.e. it is necessary that students have passed several courses, skills trainings and projects on a 2000 level and/or a 3000 level in Humanities, Sciences and/or Social Sciences. This is necessary, since students will base their individual contribution to the conference on their UCM curriculum.

Argumentation II

Full course description

In this sequel to SKI2049 Argumentation I, we will zoom in on the structure of arguments. In the first part of the skills training we will take the step to a strictly formal, almost mathematical approach, to argument analysis and explore basic sentential logic. Sentential logic introduces a simple set of rules and procedures that allow us to test whether an argument is formally valid, i.e. if its structure is correct independent of its content. To test for the validity of an argument in this way, the structure of English sentences will be separated from their content by translating the sentences into symbols; afterwards formal rules will be applied (by using truth tables and semantic tableaux) to check whether an argument logically works or not.

While the first part of the skills training concentrates on skills related to logical reasoning, the second part aims to demonstrate how such skills can be used even if a strictly formal way of argument analysis is not applicable. This is done by introducing the Toulmin model of argumentation. This model goes beyond the basic distinction of premises and conclusions as constituent parts of arguments by distinguishing different functions premises can fulfill. The Toulmin model is more flexible than argumentative analysis based on formal logic, but also more specific than the tools introduced in Argumentation I. Therefore it can be a powerful tool for specific and sophisticated argumentative analysis. Such analyses will be conducted during the course, first on small, simplified academic arguments and afterwards on a larger scale, analyzing an academic paper. Finally, in the final assignment, students are asked to apply the Toulmin model to design an argument themselves.

Course objectives

Argumentation II is the sequel to Argumentation I. In this respect the main objective of

Argumentation II is to further develop the skills of argument analysis and design. The particular focus of this skills training will be on the structure of arguments. At the end of the course students should be able to:

- Formally evaluate the validity of arguments by applying the basic methods of sentential logic.
- Identify and assess the different functions different parts of an argument fulfill according to the Toulmin model.
- Build and present arguments of their own according to the Toulmin model.

Research Methods I

Full course description

Research is “creative work undertaken on a systematic basis in order to increase the stock of knowledge [...]”. This goal can be achieved in a wide variety of ways. We can count “things”, add them up, calculate statistics about them, and get a reliable overview of “things”. We can also describe those “things” in great detail and question why they are the “things” that they are, and what that means in the context of those “things”. Which approach is better? The answer is that this depends on what you want to learn about those “things”. In other words, if we want to “increase the stock of knowledge”, it partly depends on which knowledge you are interested in increasing (your “puzzle” and specific questions), and partly also on what you consider “knowledge” to be in the first

place. In Research Methods I, we will address these issues in great detail, and we will go into how a research project can be set up in alignment with the answers to these questions.

Research Methods I (SKI1004), Research Methods II (SKI1005), and the Research Project (PRO1012) form one coherent semester-long block of courses in which you will start from scratch and end with your own finished research project. Along the way, we will discuss a wide variety of research approaches frequently used in the humanities, social sciences, and the sciences. Another goal of this sequence of courses is for UCM as an academic community to further develop its multi/interdisciplinary character, and for students to be able to reflect and comment on each other's work, no matter how diverse that may become in the course of the next three years.

The first component of this three-course block is Research Methods I. Within this block, you will learn the basics of research: about the systematic and logical aspects that are (virtually) universal across research styles, and about the differences that define them. We will develop a common vocabulary to evaluate and talk about research, and we will work on where it all begins: asking the right questions. From there, we will consider the sub-questions and hypotheses that flow from the central research questions, the data (broadly defined) that we would need to find answers, and how we can analyze that data.

Course objectives

After taking Research Methods I, you will know about:

- What research is, its philosophical foundations, and what the concepts are by which to evaluate it.
- Formulating a good research question, and matching it to a systematic research design.
- Qualitative, Quantitative and Mixed Methods, and what their respective advantages are.
- Interpreting research outcomes from a wide variety of approaches.
- Basic statistics, sampling strategies, and survey question design.
- Working with SPSS and executing basic commands.

Another goal of this sequence of courses is for UCM as an academic community to further develop its multi/interdisciplinary character, and for students to be able to reflect and comment on each other’s work, no matter how diverse that may become in the course of the next three years.

In Research Methods II, we will build on the foundation laid out in Research Methods I to work towards your own research proposal at the end of this course. Along the way, we will work on designing a research project that is feasible with limited resources in terms of time and money, but more importantly, we will work on some specific skills and techniques that will allow you to actually go out and do research. In the research methods Project in period 3 or 6 you will execute that proposal and finish with a paper presentation about your findings.

Course objectives

After taking Research Methods II, you will know about:

- Designing a realistic research project.
- Interviewing techniques and conducting basic qualitative research.
- Designing and executing a basic survey.
- Presenting your ideas in a poster format.
- Basic methods in the sciences, and how a lab works.

- Intermediate statistics, sampling strategies, and intermediate commands in SPSS.

Strategy and Negotiation

Full course description

Strategy and negotiation are central to almost every area of life, from the seminar room to the boardroom. Individuals strive to further various interests by persuasion and careful planning. The formulation of strategy is refined by use of a range of analytical tools and these need to be learnt and practised. Much the same can be said for carrying out negotiations. This course aims to make students aware of the importance and relevance of negotiation and strategy and to provide the tools necessary to be effective negotiators.

Course objectives

- To provide students with knowledge of the theories relating to strategy and negotiation.
- To train students in negotiation and strategy making.

Introduction to Academic Skills II

Full course description

The transition from secondary to tertiary education is often experienced as a rather challenging one for students, especially considering the expectations at university with regard to students' academic skills, such as essay writing, critical and analytical thinking, or skills such as argumentation. It is therefore imperative to support and train students right from the start to take on a professional ethos with regard to their university studies and their personal and academic development.

The second part of the Introduction to Academic Skills series will focus on honing the skills learned during ItAS I, and exploring skills necessary to surviving not just the first period but an entire semester at UCM. For this, we will continue exploring study skills, fine-tuning academic writing skills, and practicing information literacy skills. In the final part of the course, students will come together in groups to set up their research and writing project in anticipation of the *Introducing Academic Communication: A Writing Project*.

Course objectives

- The aim of this project is to acquaint Liberal Arts & Science students with the process and practice of writing an interdisciplinary research paper. Furthermore, the goal is to familiarize students with working in an interdisciplinary group.

Prerequisites

This course is not open to exchange students

Lab Skills: Genetics

Full course description

The aim of this course is to introduce students to the basic principles and techniques in genetics, to develop basic competences in the planning and performance of experiments and the evaluation of results, as well as writing reports. The course consists of 6 sessions of approx. 4 hours and covers topics such as DNA and RNA isolation/purification, spectrophotometry for nucleic acid quantification, amplification of specific genetic regions, gel electrophoresis and basic bioinformatics (commonly used databases, finding the genetic location of a specific gene and its gene sequences, design amplification primers for a specific genetic region, etc) using online available tools. The emphasis will be on genetic variation, which is relevant for human clinical diagnostic setting, evolution studies, etc. Furthermore, this course provides basic knowledge on Good Laboratory Practice (GLP) and Laboratory Safety Regulations. Besides the 4 hours hands-on time in the lab, each session requires 1-2 hrs of preparation beforehand and 1-2 hrs for reporting afterwards. Students will work in pairs. Lab experience is not required, although biological and chemical background knowledge at secondary school level is recommendable for full understanding of the provided techniques. If necessary, in the first lab session, pipetting skills will be trained.

Course objectives

- To develop basic laboratory skills in the field of genetics.

Prerequisites

This course is designed to be taken in combination with SCI2022 Genetics and Evolution. Students who wish to take this course should concurrently enroll in SCI2022 Genetics and Evolution or have taken SCI2022 Genetics and Evolution before.

Recommended reading

A course manual containing background information on the experiments and experimental protocols will be provided. For each training session the manual will contain questions that will help the student to prepare the experiments.

Introduction to Discourse Analysis

Full course description

Many discourse analytical approaches start from the assumption that a discourse is socially constructed. A "discourse" is an ensemble of verbal and non-verbal practices, which reciprocally structure and are structured by our perceptions of the world around us. A discourse does not just translate reality into language, but influences how we see reality. Discourse analysis provides the methodology for challenging tacit knowledge underlying our perceptions of reality.

This course makes abstract theories about discourse analysis more concrete by examining how specific discourses about, for instance, religion, secularization, globalization, orientalism, occidentalism, gender, etc. emerge from texts.

Course objectives

In this introduction to discourse analysis, students will acquire:

Bachelor University College Maastricht

- basic knowledge of some discourse analytical theories;
- basic methods for investigating the socially constructed nature of perceptions of "reality";
- basic skills for applying multi-level discourse analysis.

Introducing Academic Communication: A Writing Project

Full course description

To be a Liberal Arts & Sciences student means to have a broad interest and to be able to approach problems from different perspectives. Working together with students from different disciplines on the same problem, is a crucial part of being a true Liberal Arts & Sciences student.

Furthermore, while communication plays an important part in everyday life, within academia it is essential. Having good communication skills involves being able to express your ideas and findings in a clear and concise manner, within the guidelines set by the academic community.

In this project, students will practice writing an academic piece in an interdisciplinary team. Students will be expected to put the skills learned in Introduction to Academic Skills I & II into practice and write an extensive research paper. The project is mainly based on peer-to-peer education; by writing a paper in a small, interdisciplinary group, students will be able to both share their skills and knowledge and learn from each other.

Course objectives

- The aim of this project is to acquaint Liberal Arts & Sciences students with the process and practice of writing an interdisciplinary research paper. Furthermore, the goal is to familiarize students with working in an interdisciplinary group. The tutor will assist students in this

process and will be available to offer support, guidance and feedback. The emphasis of this project, however, will lie upon students' own input, planning and group work.

Prerequisites

This course is not open to exchange students.

Research Project

Full course description

Research is “creative work undertaken on a systematic basis in order to increase the stock of knowledge [...]”. This goal can be achieved in a wide variety of ways. We can count “things”, add them up, calculate statistics about them, and get a reliable overview of “things”. We can also describe those “things” in great detail and question why they are the “things” that they are, and what that means in the context of those “things”. Which approach is better? The answer is that this depends on what you want to learn about those “things”. In other words, if we want to “increase the stock of knowledge”, it partly depends on which knowledge you are interested in increasing (your “puzzle” and specific questions), and partly also on what you consider “knowledge” to be in the first

place. In Research Methods I, we will address these issues in great detail, and we will go into how a research project can be set up in alignment with the answers to these questions.

Research Methods I (SKI1004), Research Methods II (SKI1005), and the Research Project (PRO1012) form one coherent semester-long block of courses in which you will start from scratch and end with your own finished research project. Along the way, we will discuss a wide variety of research approaches frequently used in the humanities, social sciences, and the sciences. Another goal of this sequence of courses is for UCM as an academic community to further develop its multi/interdisciplinary character, and for students to be able to reflect and comment on each other's work, no matter how diverse that may become in the course of the next three years.

The Research Project is the conclusion of your research methods training, and an opportunity to put everything you learned in to practice. We will build on the foundation laid out in Research Methods I, and on the practical skills learned in Research Methods II. You ended Research Methods II with a final research proposal, which forms the starting point for the Research Project. Assuming that this final proposal was indeed fully ready for execution, you can start gathering data and/or analyzing your data from day one of the Research Project. You will finish with an extended paper that presents your findings.

Course objectives

After doing the Research Project, you will know about:

- Conducting a well-designed research project from start to finish.
- Academic writing in the context of empirical research.
- Presenting empirical research outcomes.

Prerequisites

SKI1004 Research Methods I and SKI1005 Research Methods II.

Think Tank

Full course description

Students will form a 'think tank' and write and present an extensive and elaborate (policy) recommendation for an external client, i.e. a company or organization. The project coordinators will offer a topic in advance. A creative and critical analysis of the problem at hand will lead to the application of knowledge and skills acquired at UCM through previous course work, and new insights developed during the project.

The first week will focus on a problem analysis and an analysis of the knowledge and expertise of the members of the think tank. The second week will focus on doing research. The third week will deal with discussing and formulating solutions. During the final week students will present their report to an audience of experts.

Besides having meetings with their fellow students and a tutor, the group might meet with guest experts (either invited by the coordinators or by the students themselves) and undertake self-organized field trips and external visits in order to obtain the required information.

Course objectives

- Let students work together and set up a problem analysis based on the assignment given by an external client, i.e. to develop skills concerning critical analysis, including the analysis of a problem, conceptualizing a problem as a case study (the ability to see the particular problem within a wider context), and to generate new knowledge relevant to the case at hand (Boyer's 'discovery' and 'integration')
- Let students work together and do research based on the assignment that was given to them, i.e. to develop skills concerning organization of work, and collaboration in a team (not specifically related to Boyer, yet instrumental towards all four aspects at the level of collaborative learning);
- Let students write a report based on an assignment that was given to them, i.e. skills related to formulating finding and recommendations in a comprehensive yet concise manner ('application' and 'teaching')
- Let students present their report to the representative and a group of experts ('teaching').

Prerequisites

At least two modules from the following list: SKI2049 Argumentation I; SKI3002 Argumentation II; Skills and Project Ethnographic and Qualitative Interviewing; PRO2004 Academic Debate; SSC2061 Statistics I (SSC1026 Quantitative Methods); and COR1005 Modeling Nature. In addition, the project and the nature of the assignment require some experience in academia. Therefore, students can only take the project in their fourth semester or later. This also allows students to do well and gain more from the project.

The coordinators would like to emphasize that Think Tank is a time-consuming project with a high workload that requires highly motivated students. Students should have a broad interest in e.g. policy development and research and analysis. Due to the specific nature of the project and the fact that group work is an essential element, students should take into account that they need to be available during entire weekdays throughout the project.

Participating in Think Tank as part of the regular workload at UCM is doable but demanding. Therefore, having a higher workload due to e.g. additional or parallel projects is not allowed.

Recommended reading

- There is no general literature or course books that students need to buy or possess. Students will choose, read and use literature that is specifically related to their topic.
- E-reader.

Conference

Full course description

In this project, students will finalize and offer the conference that has been prepared in the second period of this semester. The purpose of the conference will be to provide a platform for an audience of approximately 200 first semester students, scholars and professionals. The conference will allow people to meet and share ideas, present findings and discoveries and connect to fellow academics.

The project consists of three parts, being:

1. Final preparations for the conference, including dress rehearsals, peer feedback and dealing with the organisation of the conference.
2. Offering the conference to the target audience, organisation on the conference day(s) and gathering information for evaluation of the conference.
3. Evaluating the conference and writing a report with evaluations and recommendations for future editions

A wide variety of individual interests in the Sciences, Social Sciences and Humanities is welcomed in

order to offer a diverse conference. The project fosters an interdisciplinary approach among the participating students.

Course objectives

- To train students in skills required for preparing an academic conference.
- To train students in rehearsing, adapting and fine-tuning their contributions to a conference.
- To train students in offering a conference.
- To train students in evaluating a conference.

Prerequisites

SKI3050 Preparing Conference.

Ethnography and Qualitative Interviewing III

Full course description

This is the third of a three module course on qualitative research methods. In this module students will be mainly engaged in writing the final analysis of their research findings. The relevance of their findings must be contextualized within the larger social and political forces within which the research is embedded. The course will end with a symposium where students will have the opportunity to present their research.

Course objectives

- To produce a comprehensive narrative of their research findings.

Prerequisites

SKI2085 Ethnography and Qualitative Interviewing I and SKI3052 Ethnography and Qualitative Interviewing II

- [Ethnography and Qualitative Interviewing I](#)
- [Ethnography and Qualitative Interviewing II](#)

Recommended reading

- Hesse-Biber, S.N. (2011). *The Practice of Qualitative Research*. Sage Publication, Thousand Oaks, California, Second Edition.
- Burawoy, M. (2000). *Global Ethnography*. Berkeley: University of California Press.
- Excerpts from several books on qualitative research that are available at the UCM reading room, for example, Silverman, D. (2005). *Doing Qualitative Research* Robin, H. (2005). *Qualitative Interviewing: The Art of Hearing Data* and Ritchie, J. (2003). *Qualitative Research Practice*.

Project Deep Reading

Full course description

In this project students will engage in a deep reading of a seminal text linked to the humanities, social sciences, or natural sciences. Deep reading is a process of thoughtful and deliberate reading through which a reader actively works to critically contemplate, understand and ultimately enjoy a particular text to the fullest extent possible. Rather than selectively skimming for facts or speed-reading for summaries, the process of deep reading means slowing down, re-reading and even stopping periodically to more fully contemplate specific pages or passages. Having considered and recognized what a text says, deep reading goes a step further and strives to reflect upon the broader implications or consequences of the text; i.e. what does the text 'do'? Although deep reading is a profoundly personal experience, within the context of problem-based learning the process of deep

reading also rests on the premise that profound understanding and appreciation of a text emerges through group-based discussion and deliberation.

Course objectives

- Students will undertake an in-depth reflection and commentary on a single seminal text linked to the humanities, social sciences or natural sciences.
- Students will learn about the process of 'deep reading' as well as the genre of writing critical and substantive book reviews.

Prerequisites

None.

Recommended reading

- A single seminal text (classic or contemporary) will be assigned by individual tutors.

Science Research Project

Full course description

In the Science Research Project students will form a small research group and join an ongoing research project. In this project, we are currently working together with three Maastricht University research groups (see below). Since it is impossible to provide the specific research topics in advance, we encourage you to look at the websites of the listed research departments to get an idea of the ongoing research.

We ask all students interested in the Science Research Project to indicate via email (lonneke.beyers@maastrichtuniversity.nl) which research group you would like to join. Provide a short explanation as to how participating to research in that direction adds to your curriculum. Include an overview of the relevant courses you did. Depending on the research topic you prefer to join, you may need certain prerequisites. As a result, the coordinator and supervisors reserve the right to deny a student access to the project, should the student not meet the prerequisites. If this happens, the student will be allowed to register for another project.

Research topics:

Bachelor University College Maastricht

- Department of Complex Tissue Regeneration: <http://merln.maastrichtuniversity.nl/merln>

Main supervisors: dr. Matt Baker (m.baker@maastrichtuniversity.nl) & dr. Vanessa LaPointe (v.lapointe@maastrichtuniversity.nl)

This topic is offered in Period 3.

- Department of Neuropsychology and Psychopharmacology – Basic & Applied NeuroDynamics: <https://band-lab.com/>

Main supervisors: prof.dr. Sonja Kotz (sonja.kotz@maastrichtuniversity.nl) & dr. Michael Schwartz (michael.schwartz@maastrichtuniversity.nl)

This topic is offered in Period 3.

- Institute of Data Science: <https://www.maastrichtuniversity.nl/research/institute-data-science>

Main supervisor: dr. Amrapali Zaveri (amrapali.zaveri@maastrichtuniversity.nl)

This topic is offered in Period 6.

More information and possible additional research topics will be published on MyUCM/Education/Practice-based research projects in due time.

Course objectives

- To let students work together and apply their knowledge of the Natural and Life Sciences in the context of a project.
- To let students work together and give them a first-hand account of full-time academic research, by fully involving their team in an ongoing research question with PhD students.

Prerequisites

Courses that are appropriate for the project that you choose.

Note: This is a time-consuming, full-time project with a high workload. In principle, students should take into account that they need to be available during entire weekdays throughout the project.

Recommended reading

- There is no general literature or course book that students need to buy or possess. Students will choose, read, and use literature that is specifically related to their topic.

EU Strategy and Negotiation Simulation

Full course description

In this project students will learn about international negotiations and how countries plan and seek to achieve their national goals. Success in negotiations is often not about out maneuvering the other party, although that may happen, but rather by applying diplomatic negotiating skills to finding the possibilities for consensus. Success in negotiations is closely associated with having a clear strategy - where possible points of compromise have already been considered, and detailed planning of the various phases of the negotiation. Students will be trained in negotiation skills and the requirements of a complex EU negotiation. They will receive training on writing a position paper where they explain the negotiating position and approaches of a particular country. In the final EU simulation, students will enjoy the challenging experience of participating in an international negotiation.

Course objectives

- To teach students the strategy and negotiation skills required to achieve optimal outcomes in a multilateral setting like the EU.
- To teach students to make a detailed position paper from the perspective of: an EU member state, EU institution, a non EU state.
- Students will acquaint themselves with the negotiating approach of the country, institution they are representing.
- To train students in planning negotiations carefully-deciding on most useful alliances etc.
- Students will participate in a complex negotiation of around 6-8 hours where they will to put into practice what they have learnt.

Prerequisites

At least one of the following: COR1003 Contemporary World History, SSC1025 Introduction to Political Science, SSC1009 Introduction to European Integration.

Writing Project: "The Journal"

Full course description

The overall format of the project is that of a fictitious academic, peer reviewed journal, for which the members of a tutorial group serve both as editors and contributors. Students will select a tutorial group dedicated to a particular topic. Under the guidance of the tutors and aided by the feedback from their peers, students will write a research paper in which they explore the topic of their group, and use, refer to and compare several sources dealing with the topic. The general topic is the same for all members of a group but students may examine their own specific research question within the broader topic. During the process of researching and writing, the work of all group members will be evaluated by their peers, on the basis of criteria agreed upon by the group as relevant and fitting for their journal (in addition to a set of basic criteria given beforehand). The final papers will be bundled in the journal of that tutorial group.

Course objectives

- To further enhance academic writing skills, as well as systematic literature research skills and editing skills.
- To do an in-depth analysis of a topic, using the knowledge (theoretical framework, factual context, overall interpretations and analyses) acquired during regular content courses.
- To learn how to set up an writing review workshop, write an academic review of a paper, and how to respond to such reviews in a professional manner.
- To gain familiarity with academic journals and their mode of operation.

Prerequisites

Either SKI2084 Writing in an Academic Context OR SKI2049 Argumentation I.

- [Introducing Academic Communication: A Writing Project](#)
- [Introduction to Academic Skills II](#)
- [Introduction to Academic Skills I](#)

Recommended reading

- Reading lists from tutors of each tutorial group.
- Independent literature research.

Project Academic Debate

Full course description

Debating skills are an important component of academic life. That is, students should be able to defend their own position and to refute opposing positions, by providing substantial arguments, based on reliable sources.

In this project, students will prepare, present and defend a position for an academic debate on a specific topic. The available topics are central issues that have emerged out of a wide range of UCM courses from different concentrations. At the start of the project, the group will discuss their topic and settle on a concrete proposition for the final debate. After that, the group splits up into a pro (“yes”) and a con (“no”) side; the pro side will argue in favor of, and the con side will argue against, the proposition. The two sides prepare their cases for the final debate separately. A crucial part of this preparation is writing an individual position paper, in which one counter-argument is refuted based on three pro-arguments, which are supported by relevant, reliable sources.

During this course, there will also be a practice debate, which focusses on delivery. The purpose of this practice debate is to familiarize students with the debate setting in the lecture hall and to provide them with feedback on their public speaking skills. The topic for the practice debate will thematically relate to, but still significantly differ from, the proposition of the final debate.

In this debating course, students will work on their argumentation and communication skills. The focus is on content and delivery. It is not only important to think about *what* you say, but also about *how* you say it. The goal is learning to convince an audience of the correctness of one’s position, by presenting them with a cohe-rently structured case, based on informed arguments, which are delivered in a clear and self-assured manner.

Course objectives

- To equip students with essential debating and communication skills.
- To introduce students to the practice of speaking in a public setting.
- To become an expert on a topic of their choice (the debate topic).

Prerequisites

Recommended

Presentation Skills SKI2007, Argumentation I SKI2049.

Courses relevant to the topics of that particular year.

Recommended reading

- Students will have to search, read and use (academic) literature on their debate topic themselves.

Science Research Project: Neuropsychology

Full course description

In the Neuropsychology Research Project students will form a small research group and join an ongoing research project in the Basic & Applied Neurodynamics (BAND) laboratory at the Department of Neuropsychology and Psychopharmacology. Work in the lab mainly focuses on temporal aspects of cognitive and motor behavior. Your tasks will include all aspects of empirical research from the planning and organization of an experiment to the reporting of the results. Since it is impossible to provide the specific research topics for the project in advance, we encourage you to look at the lab's website (<https://band-lab.com/>) to get an idea of ongoing research. We ask all students with a definite interest in joining this Research Project to contact the lab via email (michael.schwartz@maastrichtuniversity.nl). In this email you should provide a short explanation as to how participating in neuropsychological research adds to your curriculum. Include an overview of the relevant courses you did. Basic knowledge of statistics is required. The coordinator and supervisors reserve the right to deny a student access to the project, should the student not meet

Bachelor University College Maastricht

the prerequisites. If this happens, the student will be allowed to register for another project.

Course objectives

• To let students work together and apply their knowledge of the Natural and Life Sciences in the context of an empirical research project. • To let students work together and give them first-hand experience of full-time academic research by involving their team in experimental neuropsychological research

Science Research Project: Data Science

Full course description

In the Data Science Research Project students will form a small research team and join an ongoing research project in the Institute of Data Science. The project will be driven by a research question to provide a solution to a domain-specific problem, which requires the application of Data Science methods. Your tasks will include all aspects of empirical research from the formulation of the research question, choosing and implementation of the right methodology, performing experiments, interpreting and analyzing results along with the scientific reporting of those results. We encourage you to look at the institutes website to get an idea of ongoing research:

<https://www.maastrichtuniversity.nl/research/institute-data-science>. A detailed description of the research project will be provided in due time. We ask all students with a definite interest in joining this Research Project to contact the coordinator via email (amrapali.zaveri@maastrichtuniversity.nl). In this email you should provide a short explanation as to how participating in this project adds to your curriculum. In addition, we request you to include an overview of the relevant courses you did. The coordinator and supervisors reserve the right to deny a student access to the project, should the student not meet the prerequisites. If this happens, the student will be allowed to register for another project.

Course objectives

• To provide students the opportunity to learn and apply knowledge about Data Science in the context of a team-based research project. • To provide students first-hand experience of full-time academic research, by fully involving the team in an ongoing research project along with data science researchers.

UCM Undergraduate Research / MarBL

University College Maastricht

MaRBL Undergraduate Research

Full course description

MaRBL is a form of RBL, Research-Based Learning. In RBL, learning is based on research that students do themselves, rather than being dependent on research done before and by others. Small groups of students will conduct research under the guidance of a senior researcher. They will act as a group, but engage in individual work as well. MaRBL offers a unique opportunity to develop one's own research topic within the context of a pre-defined research program. In this way, student researchers will make an actual contribution to ongoing research, and will experience first-hand what is involved in doing research. During the project, specific skills will be addressed at the appropriate time: e.g. problem analysis, writing a proposal, data selection and analysis reporting and presenting.

Course objectives

MaRBL is an acronym for Maastricht Research Based Learning, and is Maastricht University's excellence programme that brings multidisciplinary scientific research to the bachelor phase. It is a semester long research program carrying 10 ECTS. The level of the project depends on the subject matter and the required academic background of the participating students, and can be either 2000 or 3000 level. Successful MaRBL participants may be allowed to continue their research for more than one semester.

MaRBL encompasses the two Skills and one Project offered during a semester. In most MaRBL projects, the first course period will be mainly dedicated to an introduction into the specific field and related methodologies, and a research plan or proposal will be written. During the second and third periods the students will engage in their own research, while staying in touch with the other members of their group to discuss progress and challenges. At the end of each semester UCM will organize a symposium during which all participating students will present their research to their fellow researchers and the larger UCM community.

Prerequisites

NB: Exchange students who are interested in doing the MaRBLe project can only apply if they stay for a full year and then only in their second semester.

More than anything else, the MaRBLe undergraduate research program is aimed at students with a great appetite for learning and research. Students should ideally have a progress rate of ≥ 0.9 , and a grade average of ≥ 7.5 . In addition, specific courses may be required for particular projects (these prerequisites will be mentioned in the announcement of offered projects). At least as important as these 'technical' requirements, we expect students who apply for MaRBLe to be motivated, and to have a clear idea on how the project they apply for fits into their individual UCM curriculum. Students will apply by writing a letter of motivation, and if eligible, can be invited for an interview.

Recommended reading

- Varies per research topic.

Undergraduate Research - The Documentary

Full course description

UCM Documentary is a semester long group research project carrying 10 ECTS. The level of the project is equivalent to that of a 3000 level course, as we expect students to acquire entirely new skills while building upon their already acquainted knowledge and research skills. UCM Documentary encompasses the two skills and the project offered during the Spring Semester. During the first period, students will be acquainted with the theoretical underpinnings of the medium documentary. Simultaneously, the groups will start to develop their research. In the second period, students will conduct their research through film, and attend workshops to teach them the skills necessary to do so. In the final period, students will edit their collected footage, thus finalizing

their documentary. Special emphasis will be put on peer reviewing each other's work to enhance the quality of the final product.

Course objectives

- To familiarize students with both the theory and the practice of analytical film-making.
- To allow students to apply their already acquired research skills and to experiment with a novel way of conducting and presenting research through visual methods.
- To provide students with the practical and technical skills necessary to execute and finalize their research through digital film-making.

Prerequisites

NB: Exchange students who are interested in UCM Documentary can only apply if they stay for a full year and then only in their second semester.

Prerequisites

First year students are not eligible for this course. There are no prerequisites for this project, however, the Ethnography track or topic related courses such as Film Art and Narrative Media are recommended. Nevertheless, a definite requirement is enthusiasm and the motivation to work hard and to develop new skills. Students are required to have a progress rate of at least 0.9 and a GPA of at least 7.5.

Students will have to apply individually by writing a motivation letter, which should include an intended research topic and description of any working knowledge of digital film production. Students who apply will be accepted on an individual basis.

Applied Research & Internship Project

Full course description

In this project students will apply their academic knowledge and skills to a case presented by an external client (e.g. a company, a NGO or a governmental organization). The student produces an academically-grounded, but practically useful work-product that satisfies the needs of the client and UCM's academic requirements. The nature of the work-product differs depending on the discipline, client and case. The research in this module is practice-based and catered to the needs of an external client. At the same time, the work for the client is research-oriented. The core of the project is the research the student conducts based on the case the client presents. In order for the student to gain knowledge about the client's professional environment, the context of the case and stakeholders involved, the module includes a four-week period of on-site work at the client's workplace (the internship). Additionally, the project contains two periods of 7 weeks in which the student works on the project one day per week independently. The precise set-up of the project and the tasks per period depend on the individual assignment the student gets. At the end of the semester, the student presents his/her work to both the client and the academic supervisor.

Similar to MaRble and The Documentary, the Applied Research & Internship project takes a full semester and encompasses two skills courses and one project. No general literature is assigned. Students need to select literature and conduct research that applies to their case.

Course objectives

- To enhance the learning experience of students by providing an opportunity to apply academic knowledge and skills acquired at UCM to a real-life case from a client that is active in the work-field of the student's interest.
- To prepare students for applied problem solving and applied research outside academia.
- To provide students with an opportunity to gain insights in a professional context in their field of interest.
- To reinforce the awareness of how academic work relates to society and how academic knowledge and skills can be used to address practical, societal issues.

Prerequisites

NB: In this project, students can apply to work for an external client. The participating clients and their assignments are published via the Student Portal . If you want to apply for one of the cases, please follow the instructions in the case-description carefully.

Prerequisites

This project asks for highly motivated students, who are willing and able to work hard, and represent UCM at an external client. Students that are interested in participating are invited to consult the list of clients in the Student Portal to find out if a case is offered that fits their background and interests. Specific prerequisites in terms of courses and skills apply for each case. Eligible students must have a clear idea of how the client's case relates to their curriculum and future plans. The selection procedure includes submitting a CV and motivation letter and attending a personal interview with the client and the academic supervisor.

Artistic Research Project

Full course description

The Artistic Research Project invites you to explore conducting research, under the dual guidance of a professional artist and an academic researcher. Bridging the domains of art and science, this project challenges you to get out of your 'comfort zone' and transfer your academic knowledge and skills to an unfamiliar working environment. This novel approach to 'Research Based Learning' is grounded in the assumption that art and science are not separate domains, but rather 'particular kinds of experimental practices in a more general experimental culture' (Gere, 2010). Both sharing the same driving forces of motivation: curiosity and imagination (Nowotny in Biggs & Karlsson, 2011). This way, the project triggers your creativity, requires adaptability and invites critical reflection on established research practices, methodologies and ways of knowing. It challenges you to critically consider the question how do we know what we know?

All participants in the Artistic Research Project are part of an interdisciplinary research team working on a topical problem in collaboration with both the artist and the academic researcher. Building on their own background, expertise and interests, all team-members provide a personal contribution to the artistic process. Hence, the project is open to students from all concentrations. No specific experience in the arts is needed. Participating students should be open to experimentation with new and unfamiliar ways of conducting research, using for instance the body as a research instrument.

Similar to Marble, ARI and The Documentary, the Artistic Research Project takes a full semester and encompasses two skills courses and one project. During periods 4 and 5 students work on the project one day per week. During period 6 the workload is full time.

Because this new initiative is in a pilot phase, the number of spots is limited. We are looking for open-minded students who are drawn to the content of the project as well as interested in helping to further develop the initiative. More information about the artist, the content and the application procedure will be published via the Student Portal.

Course objectives

After completing the Artistic Research Project, a student:

- Is able to critically reflect on artistic research as a practice and how this adds to his/her curriculum at UCM.
- Developed 'aesthetic competencies' and familiarized him/herself with ways of doing and

discussing an artistic practice.

- Is able to make a well-reasoned contribution to academic debates about artistic research and public discussions about the relationship between the arts and the sciences as sources of knowledge in society.
- Has practiced 'transferring knowledge'. That is, the ability to critically analyze an unfamiliar situation, recognize what knowledge and/or skills are applicable and apply this knowledge and/or skills in the new context. In this process students have also practiced their flexibility and adaptability.
- Has practiced working in an interdisciplinary team on an 'open-ended' problem that requires creative and imaginative thinking. In this process, the student also practices to effectively communicate and define his/her role as part of the group, reflecting on his/her personal strengths and weaknesses.

MaRBL Undergraduate Research

Full course description

UCM PEERS is a semester long research program carrying 10 ECTS. The level of the project depends on the subject matter and the required academic background of the participating students, and can be either 200 or 300 level. Successful PEERS participants may be allowed to continue their research for more than one semester.

PEERS replaces the two Skills and one Project offered during a semester. In most PEERS projects, the first two course periods will be mainly dedicated to an introduction into the specific field and related methodologies, and a research plan or proposal will be written. During the second and third periods the students will engage in their own research, while staying in touch with the other members of their group to discuss progress and challenges. At the end of each semester UCM will organize a symposium during which all participating students will present their research to their fellow researchers and the larger UCM community.

Description of the project

PEERS is a form of RBL, Research-Based Learning. In RBL, learning is based on research that students do themselves, rather than being dependent on research done before and by others. Small groups of students will conduct research under the guidance of a senior researcher. They will act as a group, but engage in individual work as well: PEERS offers a unique opportunity to develop one's own research topic within the context of a pre-defined research program. In this way, student researchers will make an actual contribution to ongoing research, and will experience first-hand what is involved in doing research. During the project, specific skills will be addressed at the appropriate time: e.g. problem analysis, writing a proposal, data selection and analysis reporting and presenting.

Course objectives

UCM PEERS is a semester long research program carrying 10 ECTS. The level of the project depends on the subject matter and the required academic background of the participating students, and can be either 200 or 300 level. Successful PEERS participants may be allowed to continue their research for more than one semester. PEERS replaces the two Skills and one Project offered during a semester. In most PEERS projects, the first two course periods will be mainly dedicated to an introduction into the specific field and related methodologies, and a research plan or proposal will be written. During the second and third periods the students will engage in their own research, while staying in touch with the other members of their group to discuss progress and challenges. At the end of each semester UCM will organize a symposium during which all participating students will present their research to their fellow researchers and the larger UCM community.

- Enhancing the learning experience of students by integrating research into their undergraduate curriculum.
- Preparing students for graduate research by introducing them to and educating them in the relevant skills and knowledge.
- Emphasizing the ability to identify and formulate academic problems, and
- Selecting and applying relevant research methodologies accordingly.
- Reinforcing the awareness of how academic work relates to society: how it may respond to trends and issues in society, and how it may initiate new ideas.

Prerequisites

More than anything else, the PEERS undergraduate research program aims at students with a great appetite for learning and research. Students need to have a progress rate of ≥ 0.9 , and a grade average of ≥ 7.5 . In addition, specific courses may be required for particular projects. At least as important as these 'technical' requirements, we expect students who apply for PEERS to be motivated, and to have a clear idea on how the project they apply for fits into their individual UCM curriculum. Students will apply by writing a letter of motivation, and if eligible, will be invited for an interview.

Recommended reading

Varies per research topic.

Instructional Format

Research-Based Learning, group meetings and individual research.

Examinations

Examination may vary and depends on the nature of the research conducted, but will usually include:

- Presentation of findings.
- Research paper or report.

Students who are interested in PEERS are encouraged to contact the coordinator.

Capstone

Capstone

University College Maastricht

Capstone

Full course description

Capstone is the culmination of a student's academic work at UCM and is comparable in function to a bachelor thesis. It is a full semester module for which students receive 10 ECTS. During the first weeks students will work on writing a proposal in which they formulate their individual goals and determine a topic and format. In addition, students will choose an advisor. The advisor provides the student with advice and guidance on the content of the Capstone product.

Students work on Capstone individually. There will be meetings with the tutors, fellow students, and the coordinator. These meetings support the individual work on Capstone, by way of presenting one's own work to other students and giving and receiving feedback. Furthermore, the meetings are intended to monitor the progress and writing process. Students will meet with their individual advisor separately from the group meetings. Those meetings are intended for discussing the content of the Capstone and for receiving individual feedback on the work in progress and the final product.

An outline is handed in at the start of the second period of Capstone. A complete draft is handed in before the third period of Capstone. Both the outline and draft are discussed with the advisor. The last period is for completing and revising the Capstone.

Course objectives

- To enable students to express their individual academic profile through a scholarly project during their last semester at the College.
- To assist senior students in the transition from undergraduate education to a master's program or the labor market.

Prerequisites

To participate in Capstone students should be in their last semester at UCM (usually the 6th except for transfer students) and have at least 140 ECTS at the start of Capstone.

Note that Capstone encompasses the regular two skills trainings and project of a UCM semester. Participating in Capstone as part of the regular workload at UCM is doable, but demanding (i.e. next to the two courses per period). Therefore, having a higher workload due to e.g. additional courses, skills trainings and/or projects is not recommended.

Recommended reading

- There is no mandatory literature. Students will choose, read and use literature that is related to their Capstone topic.

CAP3000

Semester 1

3 Sep 2018

1 Feb 2019

Semester 2

4 Feb 2019

5 Jul 2019

[Print course description](#)

ECTS credits:

10.0

Instruction language:

English

Coordinators:

- [P. Vermeer](#)
- [J. Buddenberg](#)

Teaching methods:

Assignment(s), Lecture(s), Paper(s), PBL, Presentation(s)

Assessment methods:

Attendance, Final paper, Oral exam, Participation, Take home exam, Written exam
