Description
In the last century, especially since the WW II, the discourses and practices on development have dominantly shaped processes of globalisation. The trends of 21st century globalisation are, however, markedly different, whether they refer to, for instance, financial crisis or climate change. Two of these trends are particularly significant. First, some of the most pressing issues of our times are global in nature, and second, contrary to the cold war politics of the 20th century, the world is increasingly becoming multi-polar with the rising power of several developing nations. In order to prepare students to engage with this changing scenario, this course will introduce the history, leading theories and formative debates on globalisation and development, and the ways in which the two are related. The course addresses theories from the classics in political economy through modernization theory, dependency, neoliberalism, alternative development and human development. It addresses ongoing debates on globalisation, and the rise of Asia and emerging societies. The course will use both original texts and critiques to help students develop their own interdisciplinary understanding of globalisation and development, which will be represented in the form of debates among students on various contemporary aspects of 21st century globalisation and development.

Goals
At the end of the course, students ... • will know and understand the main historical narratives and academic theories on globalisation and development. • will be able to apply mainstream and critical theories pertaining to globalisation and development to analyze contemporary issues affecting relationships between Global North and South on macro-, meso- and micro levels. • will be able to critically judge and assess policies and other issues central to the development of countries in Global North and South and relate these to the context of ongoing globalisation. • will be able to formulate well-supported insights and judgements on topics of globalisation and development and communicate these effectively to peers through debates. • can communicate their insights and informed judgements to peers using matured and modern
information and communications tools (PowerPoint/internet) • will be able to conduct a literature and quantitative data search on a subject and synthesize these in oral and written forms in a coherent and informed manner.

Description
In researching Globalization and Development questions, students will be confronted with issues of working with data scarcity, integrating multiple sources of data -both quantitative and qualitative and doing research in multiple localities. This course introduces students to research methods most relevant for theoretical and empirical research in the field of globalization and development (for desk study, internship or fieldwork, respectively). The course offers general training for designing and conducting research using qualitative and quantitative tools. Students will also be acquainted with mixed methods approaches that integrate the two research traditions (qualitative and quantitative). In the process of designing research, the focus will be on challenges that are specific for the field of globalisation and development, such as data scarcity, working in cross-cultural settings, measuring poverty and inequality and working across multiple sites.

Goals
At the end of the course students will: • have acquired knowledge of and insight into the quantitative and qualitative research methods common within the field of Globalisation and Development • be able to formulate research question(s) particular to the field of G&D • be able to articulate research objectives and approach, also in relation to societal circumstances • be able to define research methodology based on the research question, available information, and/or data • be able to critically reflect on research design • be able to interpret findings in a critical and analytical manner • be able to report concisely and scientifically on the research process

Description
This course aims to take an empirical approach to the interrelationship of globalization and poverty on contemporary development challenges. The course explores the ways in which our world is interconnected: through commodities, economic and social interdependencies, common institutions and the global challenges and risks we face, in terms of migration, environment, climate, our food and health needs. In doing so the course focuses on the concepts of poverties, inequalities, vulnerabilities, and capabilities, from a variety of disciplinary perspectives. The course introduces students to the theoretical approaches of transnationalism and science, technology and society (STS) studies in order to research linkages between Global North and South and within the Global South in the fields of migration, technology and development. These two approaches are at the centre of core courses GDS4003, Transnational Migrant Networks and Flows, and GDS4004, Risk and Uncertainty in Technological Controversies, taken in parallel to this course. The course also introduces themes from the three electives offered by the Globalization and Development Studies programme during the second semester. In so doing, it presents students with an introduction to contemporary development issues in terms of the challenges and opportunities that globalization presents.

Goals
At the end of this course, students • will have acquired knowledge about the impact of the interrelationship of globalization and poverty on contemporary development challenges; • will be familiar with important terminology and concepts, like: global connections, development, poverty, vulnerability, capabilities, ecofeminism, transnational networks, science and technology studies, neoliberalizing nature, risk and uncertainty, civil society; • will be familiar with research methodology; • will be able to write an academic research paper, based on secondary data collection and a literature review.

Description
The course on Transnational Migrant Networks and Flows will introduce transnationalism as a concept and an approach. It presents students to the different dimensions of the concept of transnationalism (transnational networks and families; migrant diasporas and development; transnational cultures; transnational flows and the state) and its importance for debates on migration and development. Students will also become acquainted with transnationalism as an approach and reflect on the methodological consequences of transnational research. They will conduct an in-depth interview with a migrant and research the particular migration flow that they represent. At the end of the course students will be able to interpret and analyze theoretical and empirical literature in the areas of transnationalism and migration and development and to conduct and report on a qualitative interview.

Goals
At the end of the course students • know the main debates around migration and development • know the different dimensions of the concept transnationalism • know the theoretical and empirical academic literature in the areas of migration and development and transnationalism • have knowledge and understanding of migrant Diasporas, transnational families, networks and cultures and the role of the state in transnational flows • can conduct interviews related to the topic of transnationalism and report here over • can formulate a well-supported argument with regards to transnational phenomena based on the literature and interviews conducted

Description
In the last decade, technological controversies on New and Emerging Science and Technology (NEST), that includes biotechnology, nanotechnology and new materials, have become a subject of tension between public(s) on the one side and state and scientific establishments on the other, both in the North and South. At the root of these controversies are uncertainty of the impact of NEST on human health and environment. Dealing with uncertainty of the outcome of new and emerging science and technology has redefined the understanding of democracy, exposed the insufficiency of scientific knowledge, and pushed the boundaries of conventional legal and ethical frameworks. However, social, political and cultural response to the risk and uncertainty is radically different in the Global North and South. For example, in Europe evidence-based “sound science” of risks has become a defining discourse for the governance and regulation of science, technology and innovation, whereas in developing countries like India, it’s the political expediency of accommodating different interest groups, including the protests from civil society organisations, that determines state action. This course takes a science and technology studies perspective to explore the different ways in which risk and uncertainty are experienced in socio-cultural spaces, and manifested in politics and policy in the North and South.

Goals
At the end of the course students will: • have knowledge of Science and Technology Studies approach to the study of technological controversies • have knowledge of the social, political, and historical context of technological controversies in the North and South • have knowledge of the way in which various social, state and scientific actors shape science and technology policy • have knowledge of theoretical debates on risk society and risk culture • know comparative perspectives on the controversy on GMOs in the South and North • have knowledge of the way in which these controversies relate to and define ethical, legal and democratic frameworks in the North and South • have knowledge of the way these controversies question scientific objectivity and relate to scientific ethics • be able to produce an
extended final written work (report, research paper, or thesis) to academic standards on a MA level • learn to discuss, debate and evaluate the current technological

Description
This research seminar will prepare students for their exam option (Fieldwork, Internship, Desk Study). Numerous research traditions prevail in the field of globalization and development. The nature of the research may vary—both intensive literature study (desk study) and empirical work (internship or fieldwork) are thesis options. Students will prepare for their internship, desk study or fieldwork by: formulating research questions, developing a literature review, identifying a methodological framework, and writing of a full research proposal.

Goals
At the end of the course students will be able to: • independently identify knowledge gaps in Globalization and Development studies and formulate a research question • choose an appropriate methodology and research design utilising quantitative and/or qualitative analytical tools to answer research questions • critically reflect upon the relations between theoretical framework, methodology, and empirical findings • critically reflect on research ethics • make sensitive and reflexive choices regarding research questions and approach • reflect on the contestation and intellectual struggle inherent in knowledge and research production, and develop a socially and ethically responsible attitude towards knowledge application.

Description
This course focuses on the changing role of civil society organizations (CSOs), particularly NGOs, in contemporary development processes. It examines the contested role of civil society organizations (CSOs) in development and democratisation by considering processes of brokerage and translation and the tensions experienced by these organizations when dealing with state institutions, donors, corporations, other CSOs, transnational social movements and ‘communities’. Thereby, the course aims to critically examine and analyze the potent myths - e.g. they are independent, participatory, value-driven and non-profit - surrounding these organizations. This is done in two ways. First by showing that the ethnographic method is valuable in improving our understanding of NGOs and their relationships with other development actors. Second, through a skills exercise, Project Design and Project Proposal Writing, whereby students are confronted with the dilemmas of ‘doing development’, by having to write a project proposal for a development project.

Goals
At the end of this course, students: • will have acquired extensive knowledge about the processes of brokering and translation in development • will have acquired extensive knowledge concerning scholarly debates about civil society • will be able to write a full project proposal for a development project

Description
Large numbers of the world’s population are faced with insecurity due to precarious work, low wages, a lack of benefits and unemployment. Recent global trends are changing the nature of this insecurity and, in some cases, exacerbating it. How does this influence our approach to social and economic margins, exclusions and vulnerable populations? This course on Global Margins focuses on people and places once considered outside of, or ‘peripheral’ to the global economy. Students will study the ways in which marginalization is context specific and segmented by labour, gender and citizenship. At the meso- and macro-levels the course explores the opportunities and limitations for poorer countries in the global economy. It then delves into micro-processes to unpack ‘the margins’. It is from this vantage point—from below—that globalisation processes are explored. At the end of the course students will be able to analyse how the micro and macro orbit around each other and co-determine development.

Goals
By the end of the course, students will • identify ways that marginalisation is ordered and (re)produced, in relation to social and physical borders • understand that precarity is context specific and segmented by citizenship, race, class and gender • analyse agrarian change, particularly land poverty and landlessness, and the implications for changing social protections and ‘guarantees’ • understand state strategies to enable economically active spaces/territories, and how this is balanced with concerns over territorial integrity • understand and analyse geographical concepts and tools including space & place • explore emerging social and labour movements that centre migrant and gendered perspectives • apply critical assessment skills to a real-world case study, analysing global-local links.

Instruction language

Description
Exam Option 3 in the MA GDS Programme is a fieldwork period for students wanting to gain hands-on research experience, to learn how to apply fieldwork methods, and to train to collect and analyze field data. It is designed for students who aim to pursue a research-oriented career or to gain experience in a developing country. FASoS faculty staff in the Globalisation and Development Studies programme have ongoing research programs or projects in developing countries. To facilitate a good and fruitful fieldwork period, students are encouraged to choose their field site from among the places where these research programmes are located. Ongoing GDS research covers a wide variety of fields and is undertaken in a wide variety of geographic locations. For example, migration research in Senegal, Ghana and Congo; nanotechnologies for development research in Kenya and India; research on the role of NGOs in fighting HIV/AIDS in South Africa; ethics and politics of technological controversy on GMOs research in India, precarious work research in Cambodja, et cetera. In exceptional cases, where students have access to their own research networks, students may organize their own fieldwork site, in close collaboration with their FASoS fieldwork supervisor.

Goals
Upon completion of the Fieldwork Exam Option students will • be able to formulate an independent research question, and engage with it as the primary investigator • have learned and practiced field methods, including participant-observation, interviews, surveys, network analysis and/or ethnographic data analysis • be able to apply/use the relevant knowledge and skills acquired during the MA GDS • be able to translate theoretical and “classroom” knowledge to real-life situations • have gained practical knowledge and understanding of institutional and social actors involved in processes of globalization and development • be able to make critical assessments of policies and programs related to globalization and development • be able to work and live, in a respectful and professional way, in a different culture with different sets of values and expectations • have acquired the academic and personal skills to conduct and reflect
upon field research in an ethical and socially responsible fashion • Regarding the MA thesis, Fieldwork Exam Option students will: • be able to identify and formulate a research question and build an academic argument • be able to conduct a comprehensive literature search and bibliographic analysis, and assess the quality of the sources • be able to find, assess and critically make use of secondary and primary data • be able to critically reflect upon the relations between theoretical framework, methodology, and empirical findings and use these insights to build an academic argument • be able to use theoretical perspectives from a variety of academic fields for a chosen research topic • be able to apply knowledge, theories and methods to written work • be able to write a full, well-referenced, academic thesis and position themselves in an academic debate • be able to deal with and incorporate critical academic feedback • be able to carry out a study within a fixed time-frame and meet deadlines

Description
This course stages historical perspectives on globalization. It sets out to recognize and compare different views on globalization. In doing so it critically looks at Eurocentrism that for a long time tended to predominate in global historiography. Important elements of a Eurocentric view on globalization, like the closure of China in the fifteenth century, non-rational Oriental despotism and the allegedly typical Western entrepreneurship, are critically discussed to counter the mainstream 'rise-of-the-west'-paradigm stating the supremacy of Europe after 1500. To do so, the course will take a long-term and broad view on globalization, west and east, sometimes going back as far as the year 500 CE. The course challenges students to examine their own assumptions about East and West in long-term globalization processes.

Goals
At the end of this course, students • can recognize and compare different views on global history from 500 to 2000 CE • will know differences and similarities in linkages between global North and South in history • will understand and be able to apply the historical concepts of ‘contingency’, ‘accident’ and ‘conjunction’ to narratives of global and world history • can critically judge the ‘rise-of-the-west’-paradigm in Eurocentric global history and evaluate alternative global-historical narratives, like Oriental globalization • can independently present on a global history case to peers • can write an academic essay on a theme in global and world history and can connect this to current North-South relations

Description
The desk study involves academic research and the writing of a research paper about a topic in the field of Globalization and Development. Students conduct research, which involves gathering and examining secondary and possibly some primary data, whereby students, for their particular research question, should familiarize themselves with the existing academic debates and ways in which they may contribute to these debates.

Goals
Upon completion of the Desk Study Exam Option students will • be able to apply/use the relevant knowledge and skills acquired during the MA GDS • be able to identify and formulate a research question and build an academic argument • be able to conduct a comprehensive literature search and bibliographic analysis, and assess the quality of the sources • be able to find, assess and critically make use of secondary and primary data • be able to critically reflect upon the relations between theoretical framework, methodology, and empirical findings • be able to use theoretical perspectives from a variety of academic fields for a chosen research topic • be able to apply knowledge, theories and methods to written work • be able to write a full, well-referenced, research paper and position themselves in an academic debate • be able to deal with and incorporate critical academic feedback • be able to carry out a study within a fixed time-frame and meet deadlines • have acquired the academic and personal skills to conduct and reflect upon desk study research in an ethical and socially responsible fashion

Description
The internship provides professional, hands-on experience of work in the field of globalization and development, while at the same time benefiting the internship organization. Furthermore, the internship contributes to the academic training of students in the field of Globalization and Development. This is achieved by way of writing an internship report that consists of two parts: an evaluation report about the internship experience and an academic paper related to the field of the internship.

Goals
Upon completion of the Internship Exam Option students will: • be able to relate theoretical knowledge to a real-world setting • have gained work experience (“learning on the job” or “learning by doing” as well as learning from experienced professionals), explored a potential career option and found out more about one’s personal skills and interests. • be able to apply/use the relevant knowledge and skills acquired during the MA GDS • be able to develop and practice professional skills related to communication, organisation, team work • be able to establish professional contacts • be able to work within a set organisational structure (hierarchy) with fixed working hours, work patterns, and routines • have enriched their CV to make them more competitive candidates in the job market for jobs in the field of Globalization & Development • have acquired the academic and personal skills to conduct and reflect upon research in an ethical and socially responsible fashion Regarding the internship report students will • be able to identify and formulate a research question and build an academic argument • be able to conduct a comprehensive literature search and bibliographic analysis, and assess the quality of the sources • be able to find, assess and critically make use of secondary and primary data • Be able to critically reflect upon the relations between theoretical framework, methodology, and empirical findings and use these insights to build an academic argument • be able to use theoretical perspectives from a variety of academic fields for a chosen research topic • be able to apply knowledge, theories and methods to written work • be

Description
This workshop will help students to translate their exam option (internship, desk study or fieldwork) into their final written project. When writing a master’s thesis, issues may arise that present barriers to the writing progress. While there is no single writing method, there are ways to locate the approach that best suits each person’s work and writing habits. The thesis Writing Seminar is a space for students to find tools and tips on successfully writing a masters thesis. The objective is to improve the writing process, to make it more efficient, and increase the likelihood of crafting a good thesis that you are proud of.

Goals
At the end of the course students will be able to • apply knowledge, theories and methods to written work • discuss and address common writing hurdles • produce revised (partial) drafts of own work, incorporating teacher’s and peer’s feedback in the revising process • deliver oral presentations grounded in research • give feedback to peers in a professional way • formulate a clear opinion about scientific studies in the field of Globalization and Development by using their knowledge of theory, methodology, research design and data and analytical methods acquired in the program • produce an extended final written work (report, research paper, or thesis) to academic standards on a MA level
