Description
This course, which has an evident business administration character, addresses the issues of managing organisations and their marketing activities. With respect to the management of organisations, several topics such as the nature, origin, purpose and scope of the management activity and styles, design, and effects of management will be addressed. Based on this knowledge, the course also deals with challenges of modern organisations such as corporate social responsibility, motivation, and teamwork. The marketing part of this course builds upon ‘marketing orientation’ as a foundation of contemporary firms. Attention is, for instance, paid to basic marketing tools, positioning and segmentation strategies, and customer motivation. Throughout the course has to be examples and problems from real life situations. Next to these main subjects, practical skills deemed relevant for a successful study career will be emphasised.

Goals
This introductory course Management of Organisations and Marketing serves two main purposes. First, it aims at providing you with crucial theoretical and practice-oriented knowledge that helps you to understand the functioning of companies and the behaviour of management in business contexts. This knowledge will be derived from two disciplines: management and organisation (1) and marketing (2). More details on the perspectives of these disciplines will be provided in the next section. A second purpose of this course relates to the development of basic learning skills that you will need throughout your study at Maastricht University. This skills training mainly focuses on Problem-Based Learning. We introduce the 7-jump, different roles in tutorial groups and various PBL working methods. During the group sessions, you will have ample opportunity to practice your newly acquired PBL skills. When you have successfully finished this course, you are: capable of studying in an academic problem-based learning environment -knowledgeable of the foundations of management and organisation studies knowledgeable of the foundations of marketing studies -capable of understanding and explaining basic organisational and marketing problems in isolation

Description
QM I is the first introduction to methodological topics that are quantitative in nature: mathematics, statistics and computer science. In mathematics, we will repeat and extend students’ knowledge about functions and equations. Questions that play a role in this course are: How to translate a given problem into a mathematical model? Most of these problems are questions for a maximum or minimum value or for the significance of the problem - mathematically, the existence of a solution. How to find maximum and minimum values of a function of 1 and 2 variables? We will make use of derivatives and partial derivatives in order to formulate equations and conditions for extreme values. In statistics, we will focus on the following topics: Methods of Data collection, and types of data; Descriptive statistics: describing important characteristics of populations or samples by numerical methods as mean, median, mode (measures of central tendency) and variance and standard deviations (measures of spread), and by graphical methods, like a histogram, bar chart or Box-and-Whiskers display; Probability theory, as an introduction to random variables; Discrete random variables and the most important discrete probability distribution: the Binomial distribution; Continuous random variables and two continuous probability distributions: the Uniform and the Normal distribution; Sampling distributions, as a first step to the topic that will prevail the QM statistics agenda from now on: inferential statistics, or inductive reasoning. Understanding why large samples provide so much more information than small samples is an important element of this first step. The construction of confidence intervals in estimating unknown population parameters and Hypothesis testing in the simplest case of one population, and concepts as null and alternative hypothesis, type I and type II errors and the p-value of a hypothesis test. With regard to computing skills, training will be offered in several of the applications that are relevant for your study, and the assignments and projects you are expected to perform. Examples of such applications are: Windows, Word, Internet Explorer, Outlook (Email), Excel (spreadsheet), and the Blackboard, electronic learning environment. The main aim of QM I is to achieve that all students, irrespective of their prior education, master the topics mentioned above, and in addition to that, master these topics in an active rather than passive manner. Practical work in
different formats, like e.g. projects, will serve that last aim. The aim to level off prior quantitative knowledge of all incoming students implies that required efforts to pass this course will vary with your prior mathematical education. Students that did not have math as a major subject in their secondary education are advised to take summer classes in advance.

**Goals**
Active mastery and knowledge of basic mathematical and statistical techniques.

**Instruction language**
EN

**Prerequisites**
Math secondary school at "minor" level.

Description
This course is an introduction to microeconomics, the economics branch concerned with the decisions of individual consumers and firms and how these decisions are connected to, and interact on, markets. Consumer decision-making is analysed first, leading to insights into the demand for goods and services at the market level. The analysis of firm behaviour follows, leading to the study of different factors that determine the supply of goods and services. The two sides are integrated to see how markets act to coordinate supply and demand. The course examines four different market structures: perfect competition, monopoly, oligopoly, and monopolistic competition. The effects of different market structures on prices, quantities traded and welfare are explained. In general, monopoly has undesirable outcomes, and often prompts government intervention under the rubric of competition policy. The literature studied in the course is applied to some recent cases in competition policy. A parallel skills training integrates basic mathematical tools by discussing formal problems from the microeconomics textbook.

Goals
Understand the basic concepts and tools from microeconomics, such as opportunity costs, models and “marginal” analysis. Learn to recognize the potential of these tools in practical applications. Learn to apply basic mathematical tools to help modelling economic problems.

Instruction language
EN

Prerequisites
Basic mathematical principles, especially from calculus (comparable to the mathematics part of course Quantitative
Methods 1, code EBC1005/1006/1007).

Description
The aim of this course is to introduce accounting to students. Accounting can be split into financial accounting and management accounting. In this course, we focus on management accounting. In discussing the subject of management accounting, which has an internal focus (like managers and the board of directors), we will concentrate on the value of management accounting information for the internal decision-making process.

Goals
A basic understanding of different cost classifications, break-even analysis, budgeting and product costing, and how these tools can be used to facilitate managerial decision-making.

Description
The course provides an introduction into modern macroeconomic theory and economic policy. This gives basic tools needed to analyse macroeconomic developments. The course covers short-run fluctuations, medium-run equilibrium, and also long-run growth. It discusses macroeconomic policy in a European context, but in a globalizing world. The course includes training in presentation skills, where small teams present and discuss macroeconomic data for various countries.

Goals
-learn how to analyse the macroeconomic performance of a country -learn to understand how to interpret and understand various types of economic policy -understand current discussions about fiscal and monetary policy - training in presentation- and team-skills

Instruction language

Description
"QM II continues the quantitative topics that were initiated in QM I: mathematics and statistics. There is no separate formal training in (or testing of) computer science: this element has been integrated into the remaining two parts of the course. In the mathematics part, we will expand the analysis of functions and (systems of) equations. Issues that will be addressed are: - The matrix representation of systems of linear equations (so called linear algebra) will be introduced and supplemented by the concepts of determinants and inverse matrices, which are important tools to manipulate such systems. - The (constrained) maximisation or minimisation of (nonlinear) functions of more than 1 variable. We introduce the extreme value theorem and the Lagrange multiplier method. - Further topics include implicit differentiation, the Taylor expansion, and a collection of tools often used in finance but also in other fields (buzzwords: interest rates, present value, discounting, and geometric series). All these topics will be introduced and illustrated using economic or business applications, and functions that are often used in these fields (e.g. the Cobb-Douglas production function) will be analysed extensively. In the statistics part, we will expand the coverage of inferential statistics, i.e. how to draw conclusions about a population based on a sample. Students will learn to apply the basic tools of inferential statistics (confidence intervals and hypothesis tests) to examine a large array of questions that may occur in economics or business. We will focus on the following topics: -How to examine whether the mean of some quantitative variable (e.g. income) differs between two or more populations (e.g. men vs. women). Related to this, we will also examine what to do when the data are paired, and when the variable of interest is a proportion. -How to analyse relationships between qualitative variables (e.g. between brand preference and gender). -How to analyse relationships between two or more quantitative variables (e.g. between income and age) using regression analysis. This is one of the most frequently used statistical techniques in economics and business. All these issues will involve the use of real-life data, which will be analysed using EXCEL.”
Goals
"Introduction to the matrix representation of (linear) systems of equations, and to the (constrained) maximization or minimization of (nonlinear) functions of more than 1 variable. Introduction to the basic tools of inferential statistics, a.o. the independent samples t-test, the paired sample t-test, oneway-ANOVA, the chi-square test and regression analysis."

Description
This course provides an introduction to the fundamentals of finance. Students learn how capital markets function and how individuals and companies wishing to raise capital approach financial markets. Students learn how to make investment decisions. The basic concepts of risk and return shall be taught. Equity markets and Bond markets are introduced and the tools with which to price stocks, bonds and other financial assets, which trade on financial markets, are covered. Analytical problems are applied to financial problems during tutorial group meetings to ensure students are provided with a solid grounding in finance from both a corporate and a personal perspective.

Goals
Learn how capital markets function. Apply knowledge to financial problems, capital budgeting and investment decisions.

Description
International economic integration has grown tremendously over the past decades. Partly due to deregulation and liberalisation of markets, international trade and capital flows are booming. The world is indeed becoming a global village. In theory, free movement of labour, goods and capital should benefit each and every country. However, not all countries benefit equally. Some like the anti-globalist groups even contend that the industrialized world continues to exploit the developing world, leading to a widening of the gap between countries. In this course, we critically analyse the theoretical fundamentals of both the financial-monetary and real aspects of the international economy. On the monetary side, exchange rate determination, the role of international financial markets and the choice of exchange rate regime are the focus. On the real side, international competitiveness, the gains from trade and factor move inputs are central. We use the theoretical insights to discuss extensively important problems, like trade policy and the distribution of wealth across nations. Obviously, international organisations and institutions like the IMF, World Bank and WTO play an important role in our critical discussions.

Goals
- Learn how to analyse international trade, capital flows and exchange rates - Learn how to interpret and understand various types of economic policy in an international context - Understand current discussions about developments in international relations including the current economic crisis.

Instruction language
EN

Prerequisites
Exchange students should have a basic knowledge of micro and macroeconomics

Description
"The present skills training is about the value of ideas in understanding our environment. The discussions provoked by the economic crisis will help you to consider why some theories are relevant over a certain time period in various cultures and others are not, while at the same time proponents of both sets of theories seem to consider their respective theories as absolutely true. We will encourage you to examine why for many theories that seem to be quite successful, you can find an opposite theory that is adopted by many other academics or practitioners. You have to choose a topical area to which you want to apply this course. All first years students in this School follow this course together (i.e. Economics Econometrics, Fiscal Economics and International Business students will meet each other)."

Description
In het ondernemingsrechtelijke deel van dit blok wordt een overzicht gegeven van de belangrijkste basisbegrippen van het ondernemingsrecht. Onderwerpen die daarbij aan de orde komen zijn: de juridische organisatie van een onderneming (rechtsvormen, organen en bevoegdheden), de vertegenwoordigingsbevoegdheid, verantwoordelijkheid en aansprakelijkheid, en het kapitaal en vermogen van de vennootschap. De focus is met name gericht op de kapitaalvennootschappen - de naamloze vennootschap en besloten vennootschap - maar ook de personenvennootschappen, de vereniging en stichting komen aan bod. De te behandelen stof is verdeeld over onderwijsgroepen en enkele colleges. In het tweede deel van dit blok staat het faillissementsrecht centraal. Aandacht wordt besteed aan het doel van het faillissement en de gevolgen ervan voor de gefailleerde, zijn vermogen en zijn schuldeisers. Besproken wordt wat er wel en niet in de boedel valt en hoe en door wie die wordt beheerd en vereffend. Er zal kort gekeken worden waarom de surseance van betaling niet functioneert zoals de wetgever dat voor ogen had, terwijl de schuldsaneringsregeling voor natuurlijke personen iets uitgebreider aan de orde komt. Het blok wordt afgesloten met de bestudering van de manier waarop het vermogen van de failliete (rechts) persoon wordt verdeeld en de rangorde die hierbij geldt.

Goals
Aan het eind van dit blok hebben de deelnemers grondige basiskennis en inzicht verworven van het Nederlandse ondernemingsrecht en faillissementsrecht

Description
In dit blok krijgt u een introductie in een aantal aspecten van het formele belastingrecht. Het blok behandelt drie vakgebieden. Het grootste deel van dit blok omvat het (fiscale) bestuurs- en bestuursprocesrecht. Daarbij wordt ingegaan op de relatie tussen de Algemene wet bestuursrecht (Awb) en de Algemene wet inzake rijksbelastingen (AWR). Centraal staan daarbij onder meer de algemene beginselen van behoorlijk bestuur, de informatie-uitwisseling met de belastingdienst, het doen van aangifte, het opleggen van de aanslag, de (omkering van) bewijslast, de navordering en de naheffing. Daarna wordt stil gestaan bij de mogelijkheden voor bezwaar, beroep, hoger beroep en cassatie en de formele vereisten daarbij. In dit kader oefent u ook het schrijven van een bezwaar- of beroepsschrift. Het tweede deel van dit blok behandelt de fiscale boete. Naast het bestuurlijke boeterecht in de Awb zullen ook hier de bijzondere fiscale bepalingen omtrent verzuim- en vergrijpboeten centraal staan. Bij dit boeterecht komen ook de grenzen met strafwerving aan bod en de eisen die het Europese Verdrag voor de Rechten van de Mens (EVRM) stelt aan het proces van het opleggen van boeten. In het derde deel van dit blok komt de invordering van een vastgestelde belasting aan bod. Als de inspecteur de aanslag heeft vastgesteld en opgelegd wordt de aanslag naar de ontvanger gestuurd, die zich vervolgens bezighoudt met de inning van de aanslag. Hierbij staat de Invorderingswet centraal. Gekeken wordt naar betalingsprocedures, de dwangmiddelen die de belastingdienst heeft om bedragen in te vorderen, zoals beslaglegging of het aanvragen van faillissement, en de verschuldigdheid van rente.

Goals
- De student bezit kennis van het (fiscale) bestuurs- en bestuursprocesrecht - De student is in staat een bezwaar- of beroepsschrift op te stellen - De student bezit kennis van het (fiscale) boeterecht en de daarmee samenhangende bepalingen van het Europese Verdrag voor de Rechten van de Mens - De student bezit kennis van het invorderingsrecht
**Instruction language**

A.J. van Doesum

Description
Het vakgebied Kostprijsverhogende belastingen omvat diverse belastingen zoals omzetbelasting, accijnzen, milieuheffingen, de overdrachtsbelasting, bijzondere verbruiksbelastingen enz. Het blok kostprijsverhogende belastingen is met name toegespitst op de omzetbelasting. Van genoemde belastingen is de omzetbelasting (btw) zowel in maatschappelijk als in wetenschappelijk opzicht de belangrijkste. Elke ondernemer heeft ermee te maken. De nationale opbrengst bedraagt meer dan € 40 miljard. De omzetbelasting wordt grotendeels beheerst door Europese regelgeving en door de rechtspraak van het Hof van Justitie van de Europese Unie. De harmonisering van de omzetbelasting, die sinds 1967 voortschrijdt en in 1993 de afschaffing van de fysieke grenscontroles met zich bracht, staat in dienst van de verdere realisering van de interne markt waarop gelijke concurrentieverwaarden gelden. Het systeem van heffing, het toepassingsbereik, de structuur van de regelgeving, alle fiscaal relevante elementen ter vaststelling van een belastingschuld, zelfs detailregels en begrippen zijn Europees vastgelegd. Voorzover er onduidelijkheden in de toepassing van regels rijzen wordt de regelgeving vaak door het Hof van Justitie van de Europese Unie uitgelegd. De Btw-richtlijnen zijn tot de Lid-Staten gericht, maar ondernemers kunnen er rechten aan onttrengen. Aan de hand van casuspositites maakt u kennis met het systeem van de omzetbelasting en het belang ervan voor ondernemers. De kernelementen van de btw komen aan bod: belastingplicht, belastbaar feit, plaats van de prestatie, vrijstellingen, aftrek van voorbelasting en grensoverschrijdende transacties. Daarnaast wordt diepgaand de onroerende-zaakproblematiek behandeld in samenhang met de overdrachtsbelasting. Gedurende het blok worden interactieve colleges gegeven (1 x per week). De te behandelen casus in de werkgroepen hebben een tweeledig doel. Zij ondersteunen de studenten bij de oefening om uit de feitelijkheid de fiscaal-juridische problemen te herkennen. Dit en het verder analyseren en oplossen van de casus beoogt tevens het vlak waarbinnen de casus of de rechtsvraag speelt, te leren kennen als deel van het geheel (bijv. plaats en functie van vrijstellingen, of, de allocatie van ondernemersactiviteiten als probleem van internationale afbakening enz.). Daarmee verwerft men ook overzicht met betrekking tot de achtergronden van de regelgeving.

Description
Het blok bestaat uit twee delen, te weten het deel winst uit onderneming dat in de onderwijsbijeenkomsten aan bod komt en anderzijds het Practicum Tax accounting dat tijdens de colleges behandeld wordt. De onderwijsbijeenkomsten zullen beginnen met de bestudering van de personen die winst uit onderneming en resultaat uit overige werkzaamheden genieten. Na de afbakening van het fiscale begrip onderneming wordt aandacht besteed aan de diverse aspecten van de fiscale winstbepaling. Hiernaast gaan de colleges van het practicum Tax Accounting lopen waarbij ingegaan wordt op de afleiding van de fiscale winst uit de vennootschappelijke of bedrijfseconomische winst, met andere woorden de fiscale comptabiliteit. Ter voorbereiding op deze colleges dienen opdrachten uitgewerkt te worden. In het kader van het goed koopmansgebruik komen o.a. de vermogenssetikettering, de ondernemingskosten, vrijstellingen en de foutenleer aan de orde. Daarna zal de aandacht gericht worden op de fiscale balanswaardering (voorraad, onderhanden werk, debiteuren, bedrijfsmiddelen en afschrijvingen, fiscale reserves, voorzieningen) en op de belastingfaciliteiten voor ondernemers. Tenslotte zal diepgaand aandacht besteed worden aan bedrijfsopvolging, firmaproblemen, de oudenagedoorziening voor ondernemers en de staking van ondernemingen (met aandacht voor overlijdenswinst, inbreng in man-vrouwfirma en doorschuiving in familiesfeer). Na afsluiting van dit blok weet de student wanneer sprake is van ondernemerschap, kan de student de fiscale winst van een onderneming bepalen en is hij in staat de staking van een onderneming fiscaal te begeleiden. Ook is de student in staat te adviseren bij investeringsbeslissingen.

Goals
Doelstelling van dit blok is het verwerven van een grondige kennis inzake de fiscale winstbepaling in de inkomstenbelasting en de winstbepaling in de jaarrekening.

Instruction language
Prerequisites
De inhoud van het blok Hoofdzaken loon- en inkomstenbelasting wordt als voorkennis bekend verondersteld.

Description
In dit blok staat de belastingheffing over de winst van NV’s, BV’s en andere lichamen centraal. Het blok vormt een inleiding op de belastingheffing over de winst van vennootschappen. In het masterblok Fiscaal concernrecht wordt hierop voortgebouwd. In dit blok komen de specifieke aspecten van de winstbepaling voor vennootschappen ten opzichte van die voor ondernemers in de inkomstenbelasting aan de orde. Behandeld worden de afbakening voor de vennootschapsbelasting van het subject en het object, de storting van kapitaal en de uitdeling van winst, de aftrek van rente en de verrekening van verliezen. Verder komen, inleidend, aan de orde de voor de vennootschapsbelasting specifieke leerstukken van de deelnemingsvrijstelling en de fiscale eenheid. Naast de vennootschapsbelasting wordt aandacht besteed aan de dividendbelasting, die wordt geheven bij de winstuitkeringen door een vennootschap aan haar aandeelhouders.

Goals
Verwerven van basiskennis van de vennootschapsbelasting en de dividendbelasting. Na afloop van het blok moet de student in staat zijn om problemen op het gebied van de vennootschapsbelasting en de dividendbelasting, die geen betrekking hebben op concernstructuren, grensoverschrijdende structuren of fusies en splitsingen, te onderkennen en te analyseren en er mogelijke oplossingen voor aan te dragen.

Instruction language
NL

Prerequisites
Voor een goed begrip van de vennootschapsbelasting is enige kennis van de inkomstenbelasting onontbeerlijk. Degenen

Description
Fiscaal recht kan niet bestaan zonder een regeling van private verhoudingen. Als niet vaststaat wie eigenaar is van een huis kan men geen onroerende zaak belasting heffen en hangt ook de overheidsbelasting in de lucht. Als is verkocht, maar nog niet is geleverd, wie is dan omzetbelasting verschuldigd? Zo zijn er legio voorbeelden te geven die onderstrepen dat een goede kennis van het privatrecht voor een fiscalist essentieel is. Dit blok is er op gericht die kennis te verwerven. In “privaatrecht” wordt daartoe, voortbouwend op de vaardigheid “Inleiding recht”, ingegana op de onderscheiden gebieden binnen het privatrecht waarna met name de beginselen van het verbintensissen- en goederenrecht centraal worden gesteld. De toestankhoring en aantasting van contracten, de overdracht van goederen en de bijzondere zakelijke rechten zijn kernonderwerpen van dit blok. Verder komen aan de orde het leerstuk van de onrechtmatige daad, het schadevergoedingsrecht, de zekerheidsrechten (met name pand en hypotheek). Het blok wordt afgerond met een korte verkenning van het faillissementsrecht. For further information please refer to www.unimaas.nl > Faculty of Law > Education > Programme guide of the appropriate academic year.

Description
The course deals with basic issues in finance, such as risk diversification and asset pricing, capital structure, investment valuation, market efficiency, dividend policy, derivatives, mergers and acquisitions.

Goals
Understand what finance theory says about how risky securities are priced in equilibrium. Understand what finance theory has to say about the mix between debt and equity finance for a firm. Understand the implications of the previously mentioned points for risky investment valuation. Understand dividends: Why do firms pay dividends? Do investors demand dividends? Should dividends matter for the firm or the investor? Learn about derivatives and their use as risk management tools by firms and investors. Understand why companies merge with each other.

Instruction language
EN

Prerequisites
Students are expected to understand the following finance concepts: Types of securities (stocks, bonds) and their returns; the concept of risk diversification and efficient frontiers, principles of time value of money. Exchange students need to have taken at least one introductory finance course.

Description
The course covers the main topics in the economics of taxation. The first aim is to provide a theoretical framework for thinking about tax policy. We consider both efficiency and distributional considerations and discuss how they can be optimally balanced in designing a tax system. This theoretical framework is then applied to (i) the major types of taxes, i.e., the personal income tax, the corporation income tax, taxes on consumption and taxes on wealth, and to (ii) a variety of other issues in taxation, such as tax evasion and deficit finance.

Goals
Students will apply acquired economic competencies to the design of tax systems.

Instruction language

Description
The area of internal control and accounting information systems concerns the quality of (financial) information. As a result of recent corporate financial scandals, this has become a significant issue in today's business. Every business needs a control system that monitors the effectiveness and efficiency of operations, reduces the risk of asset loss, and helps to ensure the reliability of financial reporting and compliance with laws and regulations. The course Internal Control & Accounting Information Systems is an introduction into the key concepts and techniques of internal control, such as information quality, the COSO control framework, IT controls and organisational controls. Based on these concepts and techniques, the course addresses the design of effective and efficient internal controls for the purchasing, inventory, production and sales activities of businesses.

Goals
"Understand the concept of quality of information and the importance of this concept. Understand the role of internal control in producing information of high quality and in promoting the efficiency and effectiveness of an organisation's operations. Learn about the different organizational processes within organisations, and learn how to design internal controls for each of these processes. Learn about the controls that specifically apply to Information Technology (IT) and integrate these into each of the business processes."

Description
The course covers corporate financial accounting and reporting. The objectives of and international differences in financial accounting are discussed. However, the focus of the course will be on the understanding and application of financial accounting methods required by IAS/IFRS in various areas. During the meetings the required literature, questions, and assignments will be discussed.

Goals
"Understanding the sources and implications of international differences in accounting approaches, Becoming familiar with IAS/IFRS, but more importantly, Developing the conceptual knowledge of financial accounting in order to facilitate the understanding (i) of current financial accounting practice, (ii) of why IAS/IFRS prescribes certain accounting methods, and (iii) of why other standard setters (such as the US FASB) may have chosen to prescribe alternative methods"

Instruction language
EN

Prerequisites
"2nd year courses Accounting II (EBC2002) or Finance and Accounting (EBC2007) . Students from outside the UM should have sufficient knowledge of the topics discussed in chapters 1, 2, 3, 4, 6, 7, 8, 13, 14 of the textbook of Libby, Libby, & Short “Financial Accounting”.”

Description
In dit blok staat de natuurlijke persoon die niet ondernemer is centraal. In dit blok wordt grondig aandacht geschonken aan de systematiek van de loon- en inkomstenbelasting. Er wordt aandacht besteed aan de plaats van diverse inkomstenbronnen binnen de inkomstenbelasting, zoals arbeid en resultaat uit overige werkzaamheden. Uitgebreid aandacht krijgt de inkomstenbron arbeid en inherent daaraan de loonbelasting. Daarnaast komt de premieheffing sociale zekerheid aan de orde. In het tweede deel van het blok komt het vermogen aan bod: de inkomsten uit eigen woning (box 1) kent een prominente plaats, daarnaast komen de inkomsten in de vorm van periodieke uitkeringen en verstrekkingen (box 1), en het inkomen van aanmerkelijk belang (box 2) aan de orde. Bijzondere aandacht wordt besteed aan de inkomstenbelastinggevolgen van echtscheiding. Tot slot wordt de vermogensrendementheffing (box 3) behandeld. Het personen-, familie- en huwelijksvermogensrecht zijn eveneens van belang.

Goals
Het verkrijgen van inzicht in de structuur van de loon- en inkomstenbelasting van een werknemer resp. belastingsplichtige die niet- ondernemer is. Daarnaast dient inzicht te worden verkregen in het personen-, familie-, huwelijksvermogens- en erfrecht.

Description
This skills training is devoted to refreshing and actively applying the basic inferential tools introduced in the statistics part of typical first year quantitative methods courses: a.o. the one-sample t-test, the independent samples t-test, the paired sample t-test, oneway-ANOVA, the chi-square test and regression analysis. Six case studies using real-life datasets that reflect business problems from a.o. marketing and finance are examined extensively. The empirical analyses are performed with SPSS, a statistical software package widely used in professional practice.

Goals
"- Learn to recognize the opportunities to apply basic tools from inferential statistics in practical business situations. - Learn to implement these tools correctly, using the statistical software package SPSS, also known as PASW. - Learn to interpret the results of such analyses correctly, and understand their limitations."

Instruction language
EN

Prerequisites
Basic principles from inferential statistics as discussed in typical first-year Quantitative Methods courses such as QM1 (code EBC 1005/1006/1007) and QM2 (code EBC 1033/1034/1035): basic probability theory, population versus sample, sampling distribution, point estimation, confidence intervals, type I error, regression analysis.

Description
The aim of this course is to provide an introduction to topics in the field of (international) financial markets, central banks and monetary policy and the banking sector. The course begins with a classification of financial markets (e.g. capital markets, money markets) as well as an analysis of the role financial markets play in the overall economic framework, both from a macro-economic as well as a micro-economic perspective. Thereafter, the “management” of financial markets is discussed, in particular the central role played by central banks in this respect. The functions and tasks of central banks will be analysed, in particular their responsibility for monetary policy. In this context, the course will in particular deal with the operational framework for monetary policy, and the interaction of central banks and banks in the money market. Subsequently, another major player in the financial markets will be analysed, i.e. the banking sector. The functions of banks will be elaborated upon, as well as their respective business activities. Also the developments in the (international) banking sector will be analysed. The course finishes with an analysis of risk management at banks, and the importance of adequate risk management from the point of view of overall financial stability. In this context, the role of financial supervisors will be discussed.

Goals
To understand the functioning of financial (sub)markets (e.g. capital and money market) and their role and function in the overall economic framework; To get a basic understanding of the functions of a central bank and monetary policy; To understand the essentials of banks and to get a basic understanding of their operations; to learn about the main developments in the (international) banking sector; To understand the basics of financial risk management and the role of supervisory authorities; to get a basic understanding of financial stability issues.

R.W.J. Deumes

Description
Corporate governance involves a set of relationships between a company’s management, its board, its shareholders and other stakeholders, and is a key element in improving economic efficiency and growth as well as enhancing investor confidence. Corporate governance also provides the structure through which the objectives of the company are set, and the means of attaining those objectives and monitoring performance. This course examines various contemporary aspects of corporate governance, including issues relating to responsibility, accountability, oversight, risk, ethics and incentives. The course is multi-disciplinary, integrating concepts from the disciplines of accounting, finance, law, economics, and business ethics. It will prove most useful to those seeking a thorough introduction to the subject for both academic and applied purposes. While a multiplicity of factors affect the governance and decision-making processes of firms, and are important to their long-term success, this course focuses on governance problems that result from the separation of ownership and control in large enterprises with diffuse ownership. However, this is not simply an issue of the relationship between shareholders and management, although that is indeed the central element. In some jurisdictions, governance issues also arise from the power of certain controlling shareholders over minority shareholders. In other countries, employees have important legal rights irrespective of their ownership rights. In addition, some of the other issues relevant to a company’s decision-making processes, such as environmental, anti-corruption or ethical concerns, are taken into account. Global economic integration has been a key factor in the salience of corporate governance questions. Although this course focuses on the shareholder-oriented model, one that is today best exemplified by the large Anglo-American public firm, considerable attention is given to institutional differences in corporate governance. Although corporate governance has been a longstanding issue, the debate on corporate governance issues was given fresh impetus by well publicized corporate problems. These involved creative accounting, spectacular business failures, the apparent ease of unscrupulous directors in expropriating other stakeholders’ funds, the limited role of auditors, the claimed weak link between executive compensation and company performance, and the roles played by the market for corporate
control and institutional investors in generating apparently excessive short-term perspectives to the detriment of general economic performance. It is important for business students to get a comprehensive overview of the myriad of issues, both theoretical and practical, arising out of the current debate on creating effective corporate governance.

**Goals**
This course provides students with a comprehensive overview of the myriad of issues, both theoretical and practical, arising out of the current debate on creating effective corporate governance. The key objectives of the course are to help students: (1) Acquire a comprehensive overview of corporate governance; (2) Develop a deep understanding of the key elements of internal and external corporate governance; (3) Gain a general appreciation of institutional differences in corporate governance and many different codes of best practice world wide; and (4) Obtain a good understanding of how to analyse corporate governance in an individual company.

Description
The leading theme of this course is the value of accounting information for (strategic) decision-making within the firm. The course elaborates on cost accounting and cost management techniques. Some topics in this respect are: Activity Based Costing/Management, Balanced Scorecard, Cost Allocation and Performance Measurement. A selection of such issues will be covered in depth during the course. In addition, this course discusses state-of-the-art articles describing research studies and more popular contemplations regarding cost accounting and especially cost management.

Goals
“The leading theme of this course is the value of accounting information for (strategic) decision-making within the firm. The course provides an overview of state-of-the-art advanced cost accounting and cost management techniques. Some topics in this respect are: activity-based costing and activity-based management, performance evaluation (measurement) techniques (scorecards, ...) and cost allocation issues. A selection of such issues will be covered in depth during the course. In addition, this course introduces and discusses both state-of-the-art research studies and more popular contemplations regarding strategic cost accounting and especially cost management.”

Instruction language
EN

Prerequisites
“2nd year courses Accounting II (EBC2002) or Finance and Accounting (EBC2007). This course requires a basic knowledge of accounting procedures. Therefore, students should have at least completed a first year or second year bachelor course in accounting. Ideally, students should also have taken an intermediary course in financial or management accounting.”

Description
The skill covers four core concepts in finance, capital budgeting, valuation, portfolio analysis and the capital asset pricing model through the application of Microsoft Excel's software package. Students will use problems in the text to solve analytical tasks using excel. In addition, students will be taught advanced Excel tools, ranging from mastering advanced Excel functions, pivot tables, to introductory macros. Finally, each week students will test their knowledge through two examinations testing their knowledge on core concepts in finance and excel. This course prepares students for incorporating more advanced Excel knowledge for the business and accounting environment that lays ahead.

Goals
This skill reviews core concepts from Finance 1.5 within the context of Microsoft Excel software's concepts and tools.

Description
While most entrepreneurs are searching for innovative solutions to improve firm performance and managers attempt to organise processes in the firm to optimize performance, there is always the threat that others misuse the opportunities provided by the firm in an illegal way. These problems can be caused both by people in and outside the firm. In practice the legal system and police protection do not fully protect firms against this threat. Additional measures by firms are required for which there is always a trade-off between the costs of these measures and the potential costs of fraud and crime. This skills training develops understanding of why the practices of a firm could provide incentives for criminal behaviour and what firms can do to reduce these problems. Based on cases problems of crime and fraud will be discussed while students in groups work on a plan to limit the costs of fraud and crime for a specific firm.

Goals
- Understanding of how fraud and crime can threat the performance of a firm. - Understanding of the mechanisms generating fraud and crime and possibilities for firms to reduce the potential negative consequences.

Instruction language

Prerequisites
An advanced level of English

Description
Firms and organisations are always looking for innovative practices to improve their performance. But how do they know that a new approach is really better than the old practice? A new marketing program, changes in human resources tools, new training programs, changes at schools or new approaches to combat traffic jams or fight crime: all have to deal with the question to what extent they will really improve outcomes and what elements are responsible for this result. This requires systematic comparison and therefore experimentation is the best way to learn. Recently new tools have been developed to learn by experimentation.

Goals
- Understanding of problems and pitfalls in the implementation of innovative practices in firms and organisations;
- Knowledge about tools for systematic experimentation to support innovations;
- Basic understanding of statistical packages needed to evaluate experiments.

Description
Starting point of this skills training is the observation that a substantial number of (public) projects, once carried out, require substantial subsidisation. Think of, for example, the Millennium Dome in the UK, the “Treuhand Anstalt” in Germany, or the “Betuwelijn” in the Netherlands. For some projects this is a mere confirmation of the results from the ex-ante cost benefit analysis, but for other projects, this cost benefit analysis actually predicted a positive return. In this skills training, an ex post analysis of the actual costs and benefits of a project which was implemented or started in the past is made. An important component of such an analysis is a correct determination of (public) prices. Moreover, if an ex ante cost-benefit analysis of the project was carried out, this analysis is scrutinized in light of the ex post analysis. The students have to form teams of two or three people. After reading the mandatory literature, each team searches for two projects one of which they would like to make a cost-benefit analysis of. At the end of the first week each team presents these projects and a choice for one of the two projects is made. Then, at the end of the second week, reports on the cost-benefit analyses are presented.

Goals
Ability to take the steps that are necessary in a cost-benefit analysis of a public or semi-public/private project. Ability to correctly apply principles of public economics.

Instruction language

Prerequisites
Introductory courses in microeconomics and public economics.

Recommended literature
Introductory chapters and papers about cost-benefit analysis and project evaluation.

Description
"This course is a continuation of the skills training “Reflections on academic discourse” in the first year. In that course differences between theories were discussed. In this specific course students will get an understanding of how theories are built or in more general terms how new knowledge is created. Thereby paying attention to the aim of the research, formulating research questions and an appropriate methodology to answer the research question. Other topics are: the research process, induction/deduction, the research wheel, differences between levels of theory building and formulating hypothesis. The skill is organized as follows. First, there will be plenary sessions in which students will be informed about the reasons of the research and the research process. Second, there will be small group sessions in which students 1) analyze the development of knowledge, 2) investigate a research process and 3) write a short research proposal. These groups will be organized by topical area.”

Goals
"During this skill students will work on the following competences: conceptualization, analytical and critical thinking. As a result of the skill students will have an understanding of the need for new knowledge, resulting in developing a conceptual model, research questions/ hypothesis and appropriate research design. The course is a good preparation for understanding academic articles and all the analytical work students will do in future activities.”
