

Advanced Master in Privacy, Cybersecurity and Data Management (LLM)

This advanced master's programme offers tomorrow's leaders a future-proof methodology to perform in the challenging global field of privacy, cybersecurity, data management and AI. **The two-year part-time programme offers an ambitious curriculum that bridges the intersection between law, technology, ethics, governance and management.** You will gain deep knowledge of the legal and technological aspects of EU and global data protection and cybersecurity issues, a sound ethical and business understanding of data usage practices, combined with a broader skillset comprising management and leadership skills, communication skills and related soft skills.

Upon successfully completing the programme, you will be a key driver in enhancing trust in a global digital economy and society by applying a competent and ethical approach to the processing of personal data.

Why this programme?

This programme feeds into an increasing demand of the global market by offering education to the most influential professionals: the current and future managers within businesses and public organisations. These are the persons responsible for the management of technical and organisational measures, as well as for relations of their organisation with public and private bodies, individuals and public at large. The impact of decisions made by such leaders can resonate worldwide.
