

Example: learning to create a website from scratch;
Motivation: interest in design and plans for own company

select a skill to develop this period

Step 8: revise the learning Model of what (doesn't) work Step 9: present the skills to tutor and fellow students Step 10: formulate where and How to use the model next

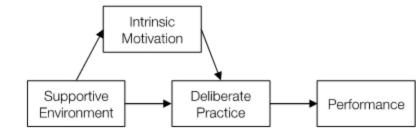

show off your ski and plan ahead complete weekly challenges Step 1: breaking down the skill into small chunks, like learning HTML commands and writing good code Step 2: exploring conditions needed to learn effectively, like timely feedback

teach your skill and adjust your model

Step 6: Making a
plan to teach simple
HTML commands and coding
Step 7: designing your own
learning challenge to test the role
of one specific factor

mid-term: visualise your insights

desired outcome Step 4: identifying factors that affect reaching the outcome Step 5: formulating open questions to be explored

Step 3: defining the
