

Research Master in Cognitive and Clinical Neuroscience Specialisation Neuroeconomics

Matthias Wibral
Associate Professor
specialisation coordinator

16 March 2019

Neuroeconomics seeks to understand and explain (puzzling) everyday behaviour.

So many choices.

What is a good and a bad choice?

How do we choose?

Neuroeconomics seeks to understand and explain (puzzling) everyday behaviour.

The power of defaults.
Organ donation rates in different countries.

Neuroeconomics seeks to understand and explain (puzzling) everyday behaviour

- Why are people gambling and taking insurance at the same time?

Neuroeconomics seeks to understand and explain (puzzling) everyday behaviour

- What makes us humans greedy and cooperative at the same time?

Neuroeconomics seeks to understand and explain (puzzling) everyday behaviour.

How does this all fit together?

Neuroeconomics is an interdisciplinary endeavour

Neuroeconomics adds brain to economics.

- Neuroeconomics seeks to uncover the neuronal basis of our choices and behaviour.

Neuroeconomics adds economics to neuroscience.

- Neuroeconomics looks at the brain as a system using limited resources.

Tools and methods from economics, neuroscience, and psychology

Economics and Game Theory

Use the formal language of economics and game theory to model and predict behaviour.

Economics Experiments

Use incentivised experiments without deception to explore behaviour.

Neuroscience

Use methods from neuroscience to measure and explore neural processes underlying observed behaviour.

Psychology

Use insights from psychology (illusions, heuristics, framing effects) to improve models of behaviour.

The Neuroeconomics Curriculum.

Jointly offered by FPN and SBE, with courses at both faculties/schools!

The curriculum:

- A. Behaviour and Mind (at SBE at FPN)
- B. Neuroscientific Methods (at FPN)
- C. Research Skills (at FPN and SBE)
- D. Research (at FPN and SBE)

Behaviour and mind

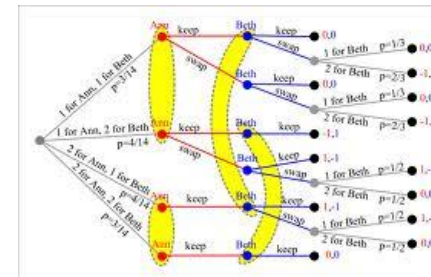

Psychology ~ Neuroscience
~ Economics

Social Neuroscience

Decision & Equilibrium Theory

Game Theory & Information

Behavioural Economics

Go the extra mile

Neuroscientific methods

Imaging (fMRI)

Electroencephalography (EEG)
Magnetoencephalography (MEG)

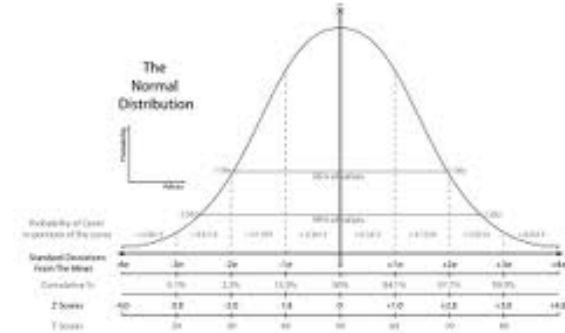

Transcranial Brain Stimulation (TMS)

Research skills

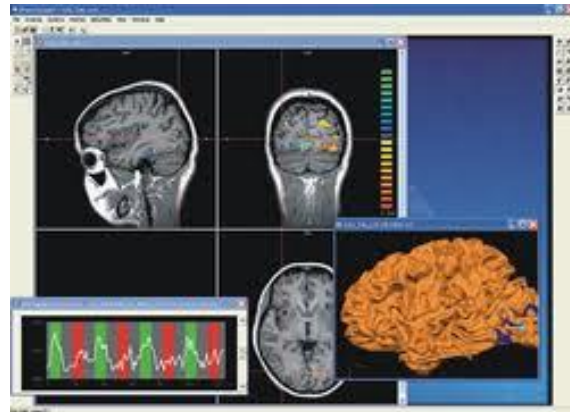

Go the extra mile

Mathematical Research Tools

Advanced Statistics

MATLAB & Brain Voyager

Experimental Economics Methods

Your own research

- Almost the whole second year is dedicated to research:
- A. Research Grant Writing
- B. Research Internship and Master Thesis
 - **In Maastricht:** Excellent multidisciplinary research group at FPN and SBE.
 - **Abroad:** Students have joined research groups at CalTech, Cambridge, Duke, MIT, Oxford, ETH Zurich, etc.
 - **Topics:** Range from individual decisions to social behavior.
 - **Methods:** Range from behavioural research to fMRI, TMS, ...

Career focus

- **Optimal basis for fundamental and applied research in neuroeconomics and decision sciences:**
 - PhD careers at economics, psychology, or neuroscience department
- **Excellent preparation for advice in decision making and conflict resolution:**
 - Consultant and advisor at institutions and organisations.

More information? Questions?

- Meet us at the information market:
 - Josip Zivkovic (1st year student)
