

Health and Social Psychology

Sarah Stutterheim

Assistant Professor | specialisation coordinator

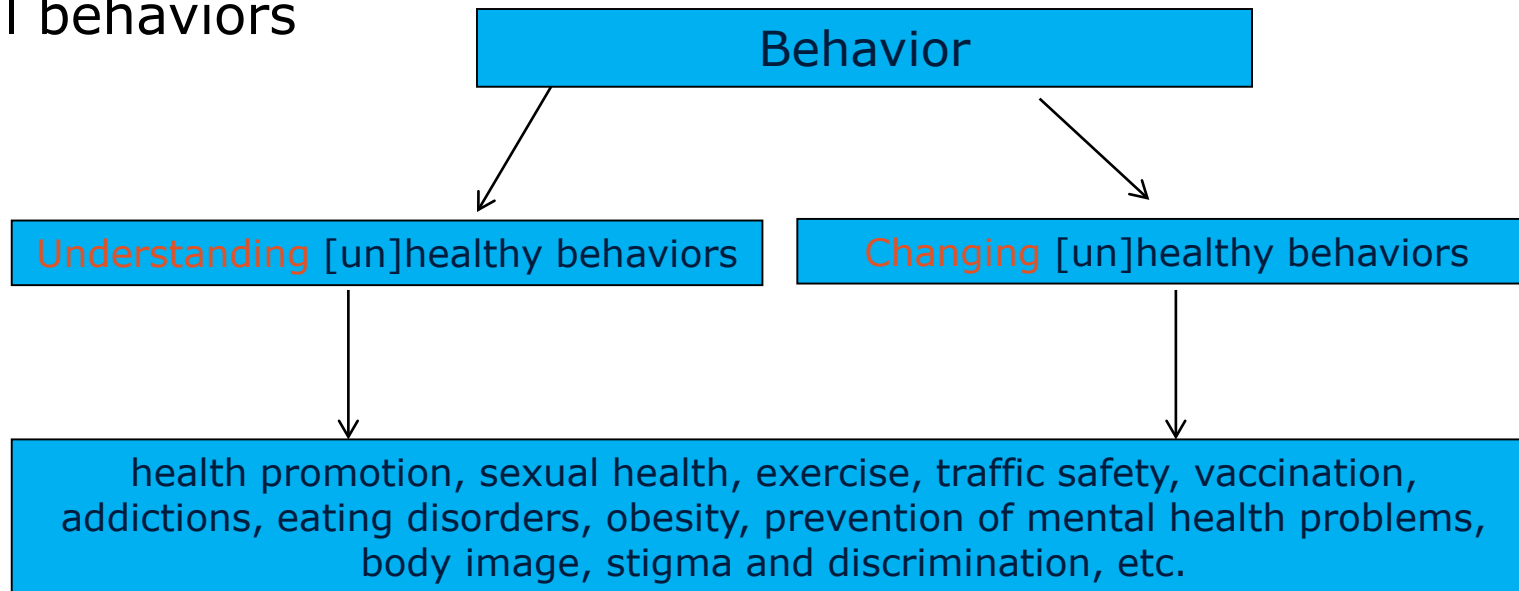

Welcome

- Overview Master programme
 - Courses
 - Internship possibilities
- And after this Master?
 - Job possibilities

Health and Social Psychology – 1 year Master

- **Master builds on Bachelor of Psychology:**
 - Social psychology, clinical psychology, learning, decision-making, lab research paradigms
- ***Understanding and changing behavior***
 - Health behaviors
 - Social behaviors

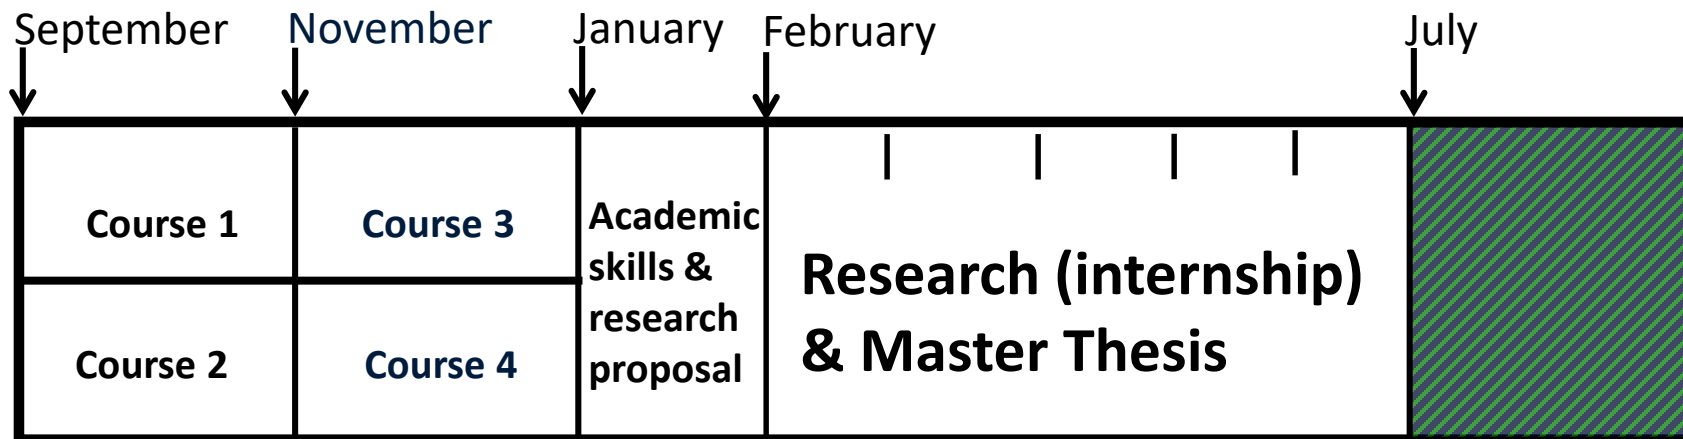

How to understand and change behavior?

- Using very diverse methods:
 - **Quantitative research**
 - Self-report – e.g. questionnaires, online & offline
 - Behavior – e.g. reaction times, food choice
 - Neuroscientific methods such as EEG, fMRI, etc.
 - Virtual Reality Lab
 - Driving Simulator
 - Eye Tracking
 - Etc...
 - **Qualitative research**
 - In-depth interviews (one-on-one)
 - Focus group discussions
 - Self-report – open ended questionnaires, online & offline

Master Health and Social Psychology

Social, cognitive, and clinical psychology

The layout of the Master:

The core courses (5 EC each)

**Go
the
mile** *extra*

Period 1

Period 2

Self regulation	Planning behaviour change programs
Bad Habits	Manipulation

8 weeks part time

8 weeks part time

Self regulation	Planning behaviour change programs
Bad habits	Manipulation

Go the extra mile

- Explaining successes and/or failures of self-regulation in [un]healthy behaviors

- Personal, social, situational factors

Self regulation	Planning behaviour change programs
Bad habits	Manipulation

- How do [un]healthy and [un]wanted behaviors develop and endure?
 - Automatic (habitual) processes
 - Controlled processes

Self regulation	Planning behaviour change programs
Bad habits	Manipulation

Go the **extra** mile

- It's all about **social influence**

- Information processing, nudging, motivational interviewing, resisting influence, tactics & strategies, mimicry, evaluative conditioning

vs

Practical training in each course

 Go
the
mile **extra**

- **Self-regulation:** be a therapist, be a client – try to change a bad habit and design a self-control intervention
- **Bad Habits:** make your own IAT (implicit association test) and conduct an experiment with it
- **Behavior Change:** use the intervention mapping approach to design an intervention to promote healthy behavior
- **Manipulation:** motivational interviewing, nudging

January: Academic Skills & Research proposal

Go
the
mile
extra

- Workshops and lectures to help you prepare for your internship and write your research proposal
 - Research designs
 - Writing skills
 - Applied statistics - refresher course
 - Ethics in research
 - Open science
 - Peer reviewing
 - Planning your career

Research [internship] & Master Thesis

- Choice of topic related to health and/or social psychology:
 - At the UM or in an external institute/company, abroad
 - Applied or experimental/fundamental
 - Own idea or join ongoing research

What kind of research can you do?

- Understanding behavior: asking 'why?'
- Changing behavior: asking 'how?'
- Healthy and unhealthy behaviors

- **REAL LIFE!**

Where can you do your internship?

- Locally (**‘internal’**) with us, at Maastricht University
 - Different labs & methods
- Or elsewhere (**‘external’**) - we have an extensive (inter)national network:
 - Sexual and reproductive health in Africa (e.g. Ghana, Zambia, South-Africa)
 - Traffic safety research with Hasselt University, Belgium
 - SoaAids Nederland (Dutch speaking students)
 - Technical University Zurich (Switzerland)
 - Contacts in the UK, Finland, Australia, Germany (Bochum, Berlin, Köln), Canada.

Okay, but what topics are possible?

Executive functions	Sport & exercise psychology	Positive psychology (ACT)	Educational psychology	Personality
Behavior change	Implicit associations	Sexuality	Serious gaming	Political psychology
Evolutionary health psychology	Reward value of food	Disgust	Prosocial motivation	Cue exposure
Intervention planning	Energy conservation	Sport psychology	Stigma & discrimination	Food and the environment
Anorexia nervosa	Intervention development	Vaccination behavior	Health promotion	Body image
LGBT issues	Intervention implementation	Public health in subsaharan africa	Impulsivity & self regulation	Obesity in adults and children
[Implicit processes in] jealousy	Applied evolutionary psychology	Maternal health	[Romantic] relationships	Dark triad of personality
Motherhood	Sexual health	Health/risk communication	Health promotion	Persuasion
Fetal alcohol spectrum disorder	Alcohol & pregnancy	Disclosure of concealable identities	Risk communication	Traffic safety
Ostracism	Neural correlates of social interaction	Models of social games	Hiv	Adolescents

And then.. **After** this master?

- Job opportunities?
 - Consultancy
 - Policy
 - Research & lecturing
 - Health education & promotion
 - Marketing & communication
 -or a combination
