Info about app

***The idea is simple:
Saving money and making students happy.***

How?

As Maastricht always did it. By putting the personal aspect first. By leading the way in learning how to learn.

Few things are as important within the context of large, dynamic systems such as the university as being able to understand the problems before they get serious. Constant evaluation is the only way to ensure that everyone is able to get the best out of him or herself and of his/her environment. The goal of this application is to allow students to evaluate themselves within the classroom environment and find access to according personal recourses to bring them up to the necessary level. The evaluation is performed in such a way that is playful and precise for students and informative for the evaluator. Helping students to achieve their studies in minimal time is also of an great monetary benefit to the state and the university.
