

## Setup Microsoft Authenticator app authentication

Use the [Microsoft Authenticator app](#) to receive notifications on your device to verify your identity when prompted for **Multifactor Authentication**.

### Step 1. Download and install the Microsoft Authenticator app

Visit the [Apple app store](#) or [Google play store](#) on your device and install the Microsoft Authenticator app. Alternatively, visit [aka.ms/authapp](https://aka.ms/authapp) and download the Microsoft Authenticator app.

### Step 2. Add your Maastricht University account to the app

1. On your desktop or laptop, visit <https://aka.ms/mfasetup>
2. Follow the wizard experience to setup the app

Scan the QR Code in the app and test the push notification flow as part of this experience. For more information, see [this guidance](#).

### Step 3. Configure an additional verification option

This is **recommended** to be able to use a different verification option to access Maastricht University resources when your default method is unavailable.

1. Visit <https://aka.ms/mfasetup>
2. Click on **+ Add sign-in method**
3. Follow the wizard experience to setup an additional verification method

**Congratulations!** You are now setup with the Microsoft Authenticator app and can receive push notifications for Multi Factor Authentication verification.

Thanks,

**Servicedesk ICTS**
